Invest SA

South Australia
Clinical trials: Connected health innovation

invest.sa.gov.au

SOUTH AUSTRALIA

Government of South Australia

Invest SA is a dedicated team of investment and business professionals within the Department of State Development, the only agency that can connect you with opportunities, industry networks, and other government agencies in the health and medical sector in South Australia.

Invest SA, Health and Medical Industries team is available to support your project facilitation, case management and business case development for growth in South Australia.

invest.sa.gov.au/sectors/health-and-medical

Acknowledgement of Country

The Department of State Development acknowledges and respects Aboriginal people as the state's first people and nations, and recognises Aboriginal people as traditional owners and occupants of South Australian land and waters.

Our strengths = your opportunity

Complete clinical trial ecosystem

Clinical trials data accepted by global regulatory agencies

Australia's best longitudinal clinical data set

Statewide electronic medical record linked to Australia's largest pathology and medical imaging providers

Advanced technological capabilities

Artificial intelligence, augmented and virtual reality (AR/VR), quantum, data analytics and computer vision leadership

World-class health and medical ecosystem

One of the world's most connected and technologically advanced precincts

State-of-the-art GMP manufacturing

R&D to commercial scale, small and large molecules and radiopharmaceuticals

Leader in cancer research, clinical translation and care

Including key opinion leaders, research institutions and isotope synchrotron for clinical research and care

43.5% R&D tax incentive program

Supporting companies across R&D activities in Australia

At the forefront of biotech R&D

Concentration of world-class biotech including vaccine, microbiome and CAR T-cell research

Advanced device manufacturing capabilities

Expertise and capability for ISO 13485

Pioneering global innovation

South Australia:

- Gained the world's first microbiome therapy approval*
- Was the first to revolutionise x-ray technology**

More than 150 health companies within a 20-minute radius

Over 4,000 researchers and concentrations of deep health expertise

CosmosID 2022, Australia to Become the First Country to Approve Fecal Transplant to Restore Gut Health
***Australian National Fabrication Facility-South Australia 2020, Mobilising life-saving portable x-ray systems across the globe*

End–to–end clinical trial capabilities

Australia's streamlined regulatory framework enables fast timelines for clinical trial conduct delivering data recognised by key global regulators such as the TGA, FMA, EMA, MHRA, MFDS and PDMA. **Clinical trials can commence in as little as six weeks.**

South Australia offers a unique and efficient ecosystem for clinical trials, serving as an ideal entry point into the Australian clinical research sector. Clinical trials in South Australia are cost-effective, highlighted by the Australian Research and Development Tax Incentive Program of up to 43.5 per cent.

Data–driven and precision health innovation

Adelaide is home to world-leading artificial intelligence, data analytics and virtual reality capabilities, supported by unique clinical infrastructure, longitudinal datasets and biospecimen for precision health innovation.

Australia's first facility solely dedicated to artificial intelligence research, the Australian Institute for Machine Learning (AIML), conducts globally renowned research in machine learning, artificial intelligence, computer vision and deep learning and collaborates with industry across sectors to develop high-tech products and solutions. AIML works with leading global companies including Roche, GSK and Medtronic to push the frontier of precision health.

Connected innovation precincts

Adelaide's flagship innovation places include Adelaide BioMed City, an AUD$3.8 billion investment, Lot Fourteen, focused on critical technologies, and Tonsley Innovation District, centred around advanced manufacturing. These places boast state-of-the-art infrastructure combined with world-class researchers, industry, government and academia, spurring a high degree of integration and collaboration.

With Adelaide BioMed City, Lot Fourteen and the universities within walking distance of each other in the central business district, South Australia has a unique clustered environment where health and medical research, manufacturing and clinical care are embedded with technological innovation.

This makes Adelaide and South Australia the perfect location to collaborate, innovate, and trial new products, for global commercialisation.

Drug development and biotech

South Australia is a centre for drug research across a wide range of indications including immunology, infectious diseases, neuroscience and endocrinology.

Oncology is a focus, including precision health, CAR T-cell technology, computational systems, epigenetics, single cell and spatial technologies, gene regulation, molecular signaling, translational oncology and cancer genomics.

Manufacturing capability

Australia's commercial drug manufacturing pedigree was forged in South Australia. The nation's leading academic manufacturing resources and established commercial operations are based here.

South Australia's contract development and manufacturing organisations (CDMOs) support process development through to clinical and commercial scale manufacturing for global markets to Good Manufacturing Practice (GMP), for biologics, small molecules. South Australia offers radiopharmaceutical manufacturing, including access to radio isotopes.

Expertise spans across therapeutics (biologics and small molecules), vaccines, medical devices, nutraceuticals, traditional medicines, and radiopharmaceuticals to GMP requirements.

End–to–end clinical trial capabilities

South Australia provides the fastest pathway for clinical trial conduct with data accepted by regulatory agencies globally, offering speed, quality and value in medical research.

South Australian Advantage

Australia's most experienced providers operate in South Australia, creating the nation's most comprehensive, connected and supportive clinical trial ecosystem, providing leadership across the entire supply chain:

- Local ethics approval and an advanced ecosystem allows you to start trials in five to six weeks.
- Save by collaborating with experienced partners, providing specialist advice for you to be efficient, de-risk and add value to your trial exploration, setup and conduct.

Our globally unique ecosystem provides a trusted and connected environment for you to partner and innovate, maximising value for your organisation.

Start in South Australia to leverage the Australian Advantage

SPEED

- Efficient regulatory framework saves up to one year in regulatory timelines
- Investigational new drug application (IND) not required for Phase I studies

QUALITY

- Globally accepted data with the highest quality standards for submission to regulatory agencies including the US FDA, UK MHRA, EU EMA, and Japan PDMA

VALUE

- 43.5% R&D tax incentive program

Complete clinical trial ecosystem

Key opinion leaders

World-leading medical researchers and clinicians are advancing global clinical research. In Australia, medical doctors usually practice across public hospitals, academia as well as private practice embedding a bench-to-bedside capability.

Dedicated Principal Investigators include:

Professor Jenny Couper, MBChB, FRACP, MD

Expertise: Type 1- diabetes; nutrition and metabolic health; cardiac, respiratory and vascular health; immunology and infection; translational health outcomes; paediatrics; endocrinology.

Professor Jodie Dodd, MBBS, PhD, FRANZCOG, DDU, CMFM

Expertise: Nutrition and metabolic health; pregnancy and birth; translational health outcomes; early origins of health.

Professor Maria Makrides BSc, BND, PhD, FAA, FAHMS, FNSA

Expertise: Nutrition and dietetics; maternal and child health; pregnancy and perinatal health.

Professor Helen Marshall MBBS, DCH, MPH, MD

Expertise: Vaccinology, immunology, infectious diseases; child health, public health.

Professor Alice Rumbold PhD, MPH, BSc(Hons)

Expertise: Reproductive health, maternal and child health, Indigenous health research.

Professor Jordan Hansford, BSc (Hons), MSc, MBBS, FRACP

Expertise: Paediatric brain tumours; cancer genetics; stem cell medicine.

Professor Michael P. Brown PhD, MBBS Hons I, FRACP, FRCPA

Expertise: clinical immunology; medical oncology; gene therapy; immunotherapy.

Professor Timothy P. Hughes MD, FRACP, FRCPA, MBBS, FAAHMS

Expertise: Chronic leukemias and myeloproliferative disorders; cancer cell biology; cancer genetics and cancer therapy; haematology; cancer biology and clinical oncology.

Professor Chris Karapetis MBBS, MMedSci (Clin Epi), FRACP

Expertise: Medical oncology; molecular targeted therapies; predictive biomarkers; epidemiology.

Dr Ganessan Kichenadasse MBBS, FRACP, M Clin Edn, PhD

Expertise: oncology including brain, gynaecological, genitourinary (bladder, kidney, prostate), sarcomas, breast, thyroid cancers, cancer of unknown primary and other rare cancers.

A/Professor Rohit Joshi MBBS, MD, FRACP, FACP, FRCP

Expertise: All solid cancers including lung, breast, gastro-intestinal and kidney cancers; cancer biology and clinical oncology; tumour immunology; cancer therapy; phase I-III studies.

Professor Christopher Sweeney MBBS, MD

Expertise: Genitourinary malignancies; haematology; oncology; men's health; pharmacogenetics; personalised medicine.

Professor Deborah White PhD, FFSc(RCPA)

Expertise: Leukaemia; cancer biology and clinical oncology; translational health outcomes.

Professor Guy Ludbrook PhD, MBBS, FANZCA

Expertise: Pharmacology, anaesthesia, health systems, health services, health economics, , medical devices, clinical trials - phase I to phase III, neuropharmacology.

Professor Paul Rolan MBBS, MD, FRACP, FFPM (UK), FFPMANZCA

Expertise: Neuroscience, behaviour and brain health; chronic pain; cellular immunology; pharmacology; pain; indigenous and disadvantaged health.

Professor Sepehr Shakib PhD, MBBS, FRACP

Expertise: Clinical pharmacology; chronic heart failure; internal medicine.

Dr Paul Wabnitz BSc, MD, PhD, MBA, FRACP

Expertise: Pharmacology, toxicology, clinical medicine; drug development; precision medicine; translational medicine; immunology.

Professor Stuart Brierley PhD, BSc, BSc Hons

Expertise: Chronic visceral pain; neuroimmune interactions in the gut; novel pain therapeutics.

Professor Andrew Bersten, MB, BS, MD, FANZCA, FJFIC

Expertise: Critical care medicine, Respiratory medicine.

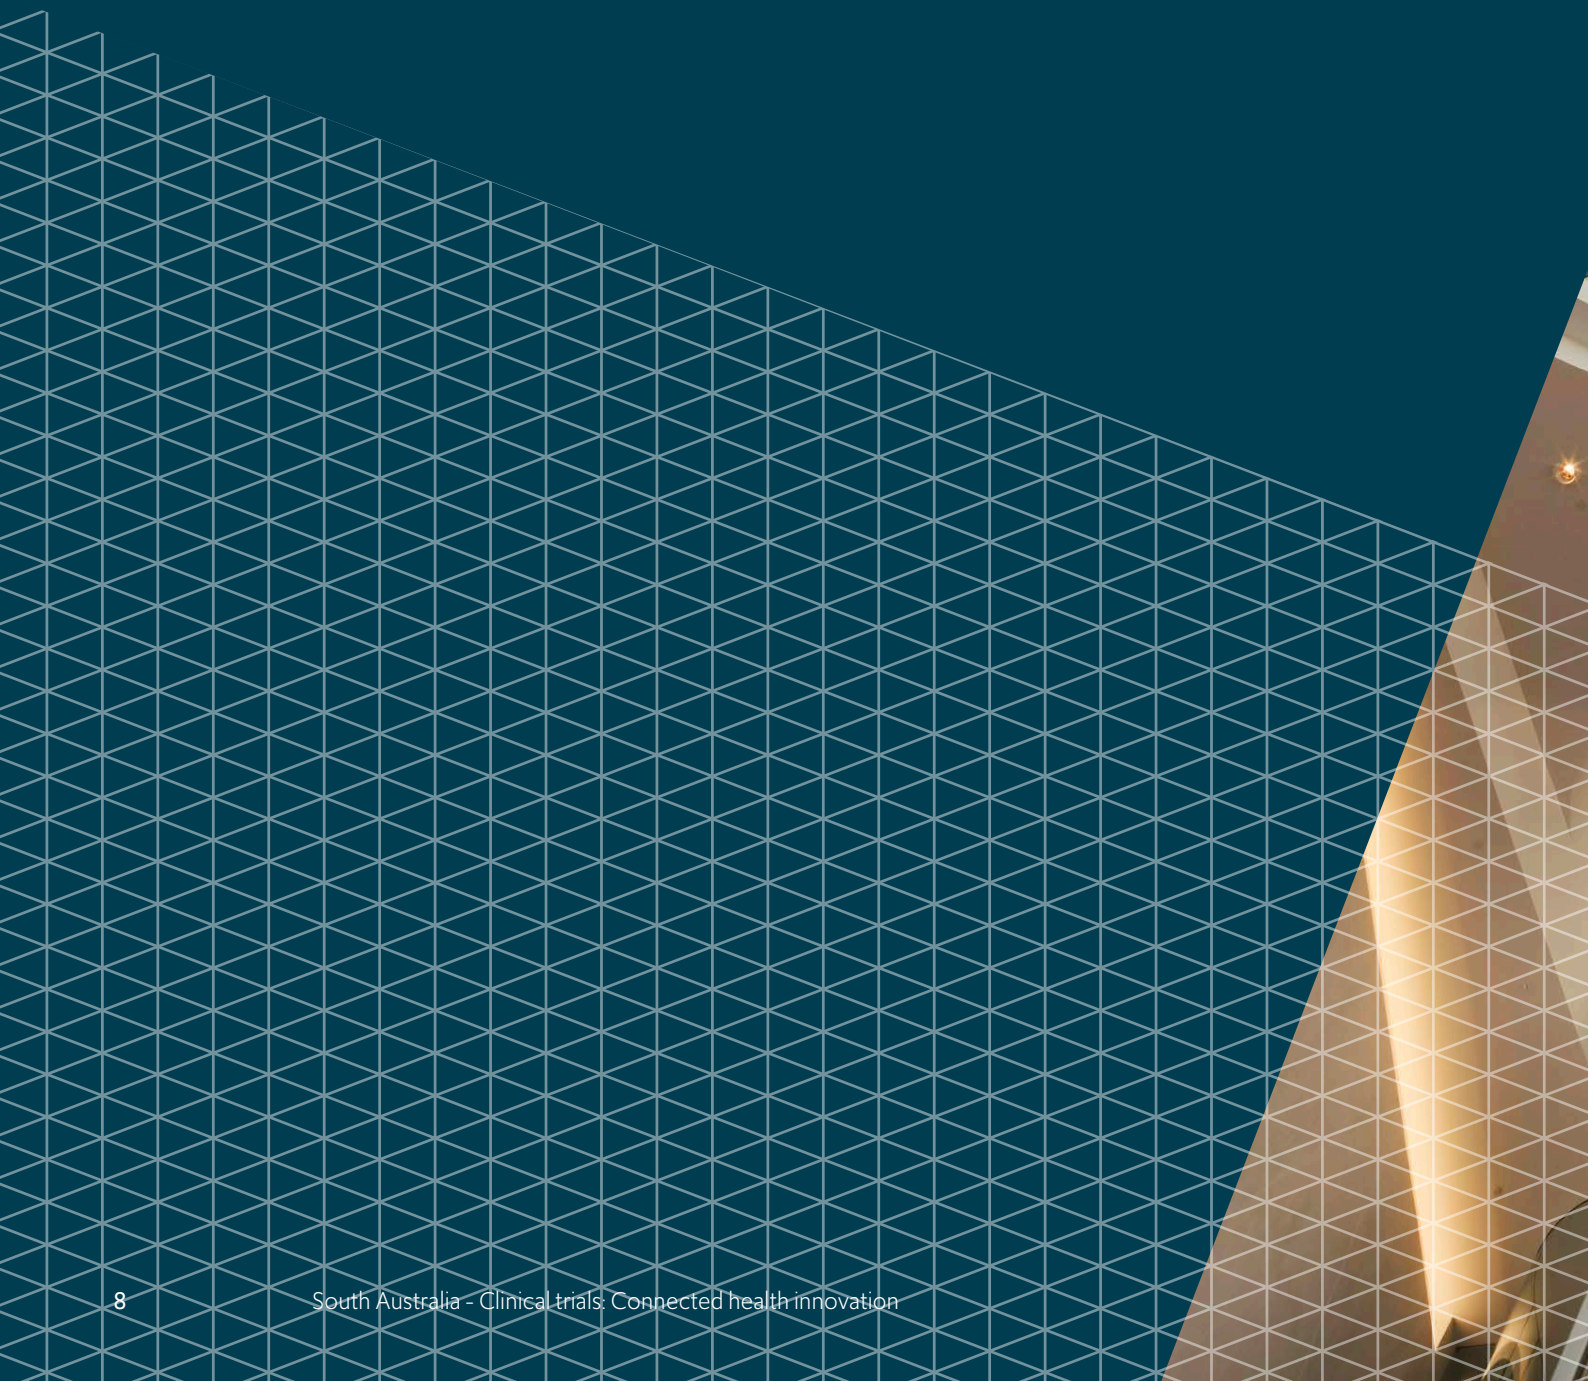

Associate Professor David Schultz, BMBS, FRACP

Expertise: Motor neuron disease; stroke; migraine; and multiple sclerosis.

Professor Peter Psaltis, (MBBS (Hons), PhD, FRACP, FCSANZ, FESC)

Expertise: Cardiovascular medicine; haematology; immunology and infection; stem cell biology; atherosclerosis; vascular regeneration.

Clinical trial service providers

Clinical sites

Australian Teletrial Program
Access to clinical trials, closer to home

Australian Teletrial Program

Australian Teletrial Program – South Australia (ATP-SA) is expanding clinical trials to rural, regional and remote South Australians by connecting isolated "satellite" sites to a primary site.

Teletrials provide improved capability to recruit trial participants from rural South Australia and promote diversity, equity and inclusion by increasing diversity in data collection and including Aboriginal and other vulnerable communities in the trial.

The hub-and-spoke cluster model reduces contract complexity for sponsors.

Part of a nation-wide program, ATP-SA is building a more interconnected clinical trials system and expanding the reach of clinical trials in South Australia. This increases the potential trial population by 50% (1.4 million > 1.8 million).

ATP-SA is increasing the capacity and capability of regional health services to see clinical trials as business as usual. The ATP-SA team can provide education and support all aspects of clinical trials including feasibility, study start-up logistics, regulatory processes, clinical trial coordination, protocol development to establish clinical trials and digital/telehealth support.

sahealth.sa.gov.au/saclinicaltrials

CRSA
Cancer Research SA

Cancer Research South Australia

Cancer Research South Australia (CRSA) provides compassionate, state-of-the-art cancer care by improving access for patients in South Australia to novel therapies for treatment of cancer.

CRSA conducts phase I, II and III clinical trials and has high-level expertise in all solid tumours, including cancers of the breast, lung, male genito-urinary system (prostate, bladder, kidney and testis), female reproductive system (ovary, uterus and cervix), gastrointestinal tract (oesophagus, stomach and bowel) and melanoma.

Working alongside national and international organisations and specialist cancer surgeons, radiation oncologists and all major medical specialties, the team at CRSA ensures each patient's cancer care is optimised, individualised, and of the highest standard.

crsa.au

CMAX Clinical Research

CMAX Clinical Research (CMAX) has been a leader in delivering early phase clinical trials and first-in-time human (FIH) studies for 30 years. One of Australia's oldest, most respected and successful clinical trial sites in Australia.

CMAX has a proven track record of experience and innovation in early phase clinical research and a depth of clinical pharmacology expertise within the team. Their modern clinical trial unit is equipped with 78 inpatient beds and located within Adelaide's BioMed City provide ready access to state-of- the-art facilities, and world-class medical specialists.

CMAX has designed and delivered more than 800 early phase clinical trials, including more than 200 FIH studies for clients in the pharmaceutical, biotechnology and devices fields. They are FDA-audited and EMA, PMDA and Health Canada-compliant.

CMAX's services are eligible for the Australian R&D Tax Incentive program, allowing eligible companies to claim up to a 43.5% rebate on qualifying R&D spend.

cmax.com.au

Fusion Clinical Research

Fusion Clinical Research supports the medical community to provide clinical trials to patients in a general practitioners' (GP) setting.

A division of CMAX Clinical Research owned by the I'rom Group, Fusion's experienced team comprises nurses, scientists and technicians and are experts in client services and patient care, and end-to-end trial start-up activities and trial execution with access to a broad patient population through an extensive GP and specialist clinic network.

By leveraging Fusion's network of GPs, specialists and patient populations, the company offers a unique service to local and international pharmaceutical, biotech, digital health and CROs, connecting them to doctors and patients ready to undertake clinical trial research in domestic settings.

Fusion Clinical Research is actively involved in various clinical trials, including weight loss studies, dementia treatment research, diabetes studies, obesity trials, vaccine trials (including COVID-19, influenza, and RSV), cardiovascular disease trial.

fusiontrials.com.au

Southern Oncology Clinical Research Unit

Southern Oncology Clinical Research Unit (SOCRU) is a leading clinical research organisation, located within the Flinders Private Hospital, specialising in conducting phase I oncology clinical trials. The organisation is staffed by a team of highly skilled and experienced clinical research professionals who are dedicated to advancing cancer research.

SOCRU has extensive experience in conducting trials using a variety of interventions including cytotoxic agents, targeted therapies, immunotherapy and oncolytic viral and cell therapies.

SOCRU places a strong emphasis on ethical research practices, patient safety and works closely with regulatory authorities to ensure that all trials meet the highest quality and regulatory standards. By conducting rigorous clinical trials, SOCRU aims to contribute to the development of new cancer treatments that can provide better outcomes for patients and improve the quality of life of people living with cancer.

socru.org.au

Contract development and manufacturing organisations (CDMOs)

BioCina

BioCina is a global biologics CDMO operating from Australia. BioCina is providing end-to-end solutions for biologics and small molecules. BioCina offers fully integrated drug substance and drug product manufacturing services to streamline complex development programs and accelerate time to market.

BioCina's Adelaide facility specialises in biologics drug substance manufacturing, specifically microbial, plasmid DNA (pDNA), messenger ribonucleic acid (mRNA), and lipid nanoparticle (LNP) modalities, supporting both clinical and commercial production. BioCina's Perth facility offers advanced sterile fill-finish capabilities, including Blow-Fill-Seal (BFS), cytotoxic and non-cytotoxic vial filling, pre-filled syringes, and cartridges.

With a strong regulatory track record, BioCina's facilities meet global compliance standards, including US FDA, EMA, Health Canada, and TGA. The company's client-centric approach, elite quality standards, and industry-leading on-time delivery ensure that drug developers worldwide have a reliable partner from early development to commercial production.

biocina.com

Mayne Pharma Services

Mayne Pharma Services is a full-service contract development and manufacturing organisation (CDMO) that offers pharmaceutical development and manufacturing from their GMP and FDA-accredited Australian plant.

Mayne Pharma Services partners globally to develop pharmaceutical products from concept to commercialisation quickly and cost-effectively. They offer seamless development which includes manufacture of clinical trial supplies, scale up of new formulations and technology transfer of products through to commercial production.

Mayne Pharma Services has a 40-year history of successfully developing and manufacturing oral and topical products for the global market. Their expertise includes formulation development of modified release capsules, tablets, semi solid and liquids, using best practice assessment techniques and specialised equipment.

From their manufacturing facility in South Australia, Mayne Pharma Services offer a team of highly skilled scientists to help with the development, validation and optimisation of testing procedures, as well as navigating the complexities of regulatory submissions.

maynepharmaservices.com

Contract research organisations (CROs)

Avance Clinical

Avance Clinical (Avance) is a premium full-service contract research organisation (CRO) headquartered in Australia with significant operations across New Zealand, Asia, North America and Europe. Avance is delivering quality clinical trials, with globally accepted data for international biotechs and pharma. Avance offers comprehensive pre-clinical services through to late phase studies, leveraging the Australian Advantage of significant government incentive rebates of up to 43.5%, no IND requirement, and rapid start-up regulatory processes.

Avance is the market leader in Early Phase clinical trials providing international biotechs with fast, agile and adaptive solution-oriented clinical research services. With experience across more than 250+ indications across all therapeutic areas, Avance delivers high-quality data recognised by key global regulators, including the TGA, FDA, EMA, MHRA, MFDS, and PDMA.

Avance Clinical uses state-of-the-art technology and gold-standard systems across all functional areas to provide clients with the most effective processes. Medidata, Oracle, and Medrio are some of their technology partners.

avancecro.com

Syneos Health

Syneos Health is a global fully integrated biopharmaceutical solutions company committed to helping biotech and pharmaceutical companies navigate and optimise pathways to success. They translate unique clinical, medical affairs and commercial insights into outcomes to address modern market realities.

Syneos Health bring together a talented team of professionals, who work across more than 110 countries, with a deep understanding of patient and physician behaviours and market dynamics. Together they share insights, use the latest technologies and apply advanced business practices to speed their customers' delivery of important therapies to patients.

With expertise in drug development in Australia, Syneos Health's Adelaide office provides valuable insight into the pharmaceutical, biotech and medtech landscape as well as the conduct of clinical programs to facilitate the development and commercialisation of new medical and healthcare assets.

syneoshealth.com

Drug storage and distribution

Zuellig Pharma SSG Australia

Zuellig Pharma SSG Australia, as part of the Zuellig Pharma Group, is a leader in delivering best-in-class clinical trial supply and logistics services, and one of the largest healthcare solutions in Asia.

With a proven record of over 27 years of experience, their Australian facility has supported over 1,400 clinical trials, predominantly in Australia and New Zealand, spanning across phase I, II, III and IV studies, SAS supply and direct-to-patient services.

Services include:

- Clinical storage and distribution
- Cold chain management
- Global and local clinical sourcing
- Secondary packaging and labelling
- Local and global project management
- Regulatory insight (Import of Record-IoR, Export of Record-EoF, Release For Supply-RFS) and assistance
- Returns and destruction management
- Direct-to-patient supplies, including depot-to-patient, site-to-patient and direct-from-patient.

zuelligpharma-australia.com.au

Ethics

Bellberry Limited

Bellberry Limited (Bellberry) is an Australian, independent, not-for-profit organisation providing streamlined scientific and ethical review of human research projects across all phases of clinical and device trials, and social and behavioural studies across private, public, academic and government sectors. Bellberry aims to protect the welfare of research participants and improve the quality, efficiency and effectiveness of research.

Founded 21 years ago, Bellberry initially focused on providing specialist scientific and ethical review for research conducted in the private health sector and has evolved to become the single largest reviewer of clinical research in Australia.

Bellberry holds weekly Human Research Ethics Committee (HREC) meetings, providing specialist oversight to at least one third of Australia's clinical trial notification (CTN) registered clinical trials annually. Their 125+ HREC members have reviewed over 4,000 studies since its beginnings in 2004.

Bellberry is at the forefront of global drug development and is the first organisation in Australia to achieve international accreditation for excellence and ethically sound processes in running HRECs by the Association for the Accreditation of Human Research Protection Programs (AAHRPP).

As a not-for-profit, Bellberry redistributes any surplus from its professional review service back into the research sector community to support the advancement of research knowledge through philanthropy and education.

Bellberry provides real time expert insight on regulatory processes including ethics, governance and start-up processes.

bellberry.com.au

Regulated bioanalysis and toxicology

Agilex Biolabs

Agilex Biolabs, Australia's largest most technologically advanced regulated bioanalytical and toxicology laboratory, provides reliable and defendable bioanalytical, biomarker, and toxicology data, enabling their clients globally to improve human health. They have been recognised for their scale and proven track record for large and small molecule bioanalysis including quality method development, method validation and sample analysis services.

Agilex Biolabs' FDA-inspected, world-class immunoassay and immunobiology laboratories are equipped with cutting-edge technology, including the Sciex API 6500+, Gyrolab xPlore, MSD Quickplex 120, BD FACSymphony A3, and Cytek Aurora flow cytometers. The labs also feature a droplet digital real-time PCR system for precise quantification of RNA, siRNA, and miRNA, supporting clinical studies such as vaccines and gene therapies. Agilex Biolabs holds ISO/IEC 17025 and ISO/IEC 27001:2022 accreditations, alongside OECD GLP recognition through NATA, ensuring the highest standards of quality for comprehensive preclinical to clinical testing services.

As a global leader in providing flexible solutions, Agilex Biolabs has accelerated numerous biopharmaceutical and pharmaceutical drug development programs from the United States, Asia-Pacific and Europe.

agilexbiolabs.com

GNOMIX

With experience spanning four decades of growth and development in the molecular genetic industry, GNOMIX provides a one-stop shop for a broad range of molecular solutions, tailored to meet individual client requirements.

Combining client engagement with experience and extensive professional network, GNOMIX is committed to collaborating with clinical researchers, CROs and clinical trial units to provide personalised quality solutions to meet the scale, data content, financial and time constraints of their projects.

GNOMIX is accredited by NATA to ISO/IEC 17025 standard for laboratory testing.

Services include:

- Molecular laboratory services: DNA and RNA extraction and quality control, PCR and sequencing
- Sequence analysis: DNA and RNA assay and sequencing from individual SNPs to exome or transcriptome analysis
- Expression analysis: off-the-shelf and custom-design assays for gene expression analysis
- Precision custom solutions: holistic tailored solutions
- Consultancy.

gnomix.com.au

South Australian Genomics Centre

With NATA accreditation under ISO/IEC 17025, the South Australian Genomics Centre (SAGC) is a unique partnership between South Australia's three public universities – University of Adelaide, University of South Australia and Flinders University. SAGC is supporting research and industry partners across disciplines, nationally and internationally.

SAGC provides an extensive suite of genomics and bioinformatics services, including ribonucleic acid (RNA) sequencing, whole genome sequencing (WGS), whole exome sequencing (WES), epigenomics, metagenomics, and single-cell and spatial transcriptomics.

SAGC is equipped with a broad-range of next-generation sequencing (NGS) platforms, guaranteeing the highest quality standards in the genomics field. The dedicated bioinformatics team delivers advanced, customised data analysis, integration, and visualisation solutions.

Single Cell Sequencing Service:
SAGC offers a variety of single cell technologies and application types: gene expression, immune profiling, epigenetics, CRISPR library detect.

- Complete toolkit from 10X Genomics
- Certified service provider for Parse Biosciences.

Spatial Transcriptomics Service:
SAGC is the only Genomics Centre in Australia offering both 10X Genomics platforms (Xenium in situ analyser, Visium HD) and Stereo-seqTM single cell whole transcriptomics from MGI Australia.

sa-genomics.com.au

R&D incentives, accounting and corporate services

rdi partners

RDI Partners

RDI Partners is an award-winning, globally connected provider of a full range of corporate and management services enabling foreign-owned and controlled biotech/medtech companies to establish a presence in Australia, conduct research and development (R&D) activities and benefit from the 43.5 per cent R&D tax incentive.

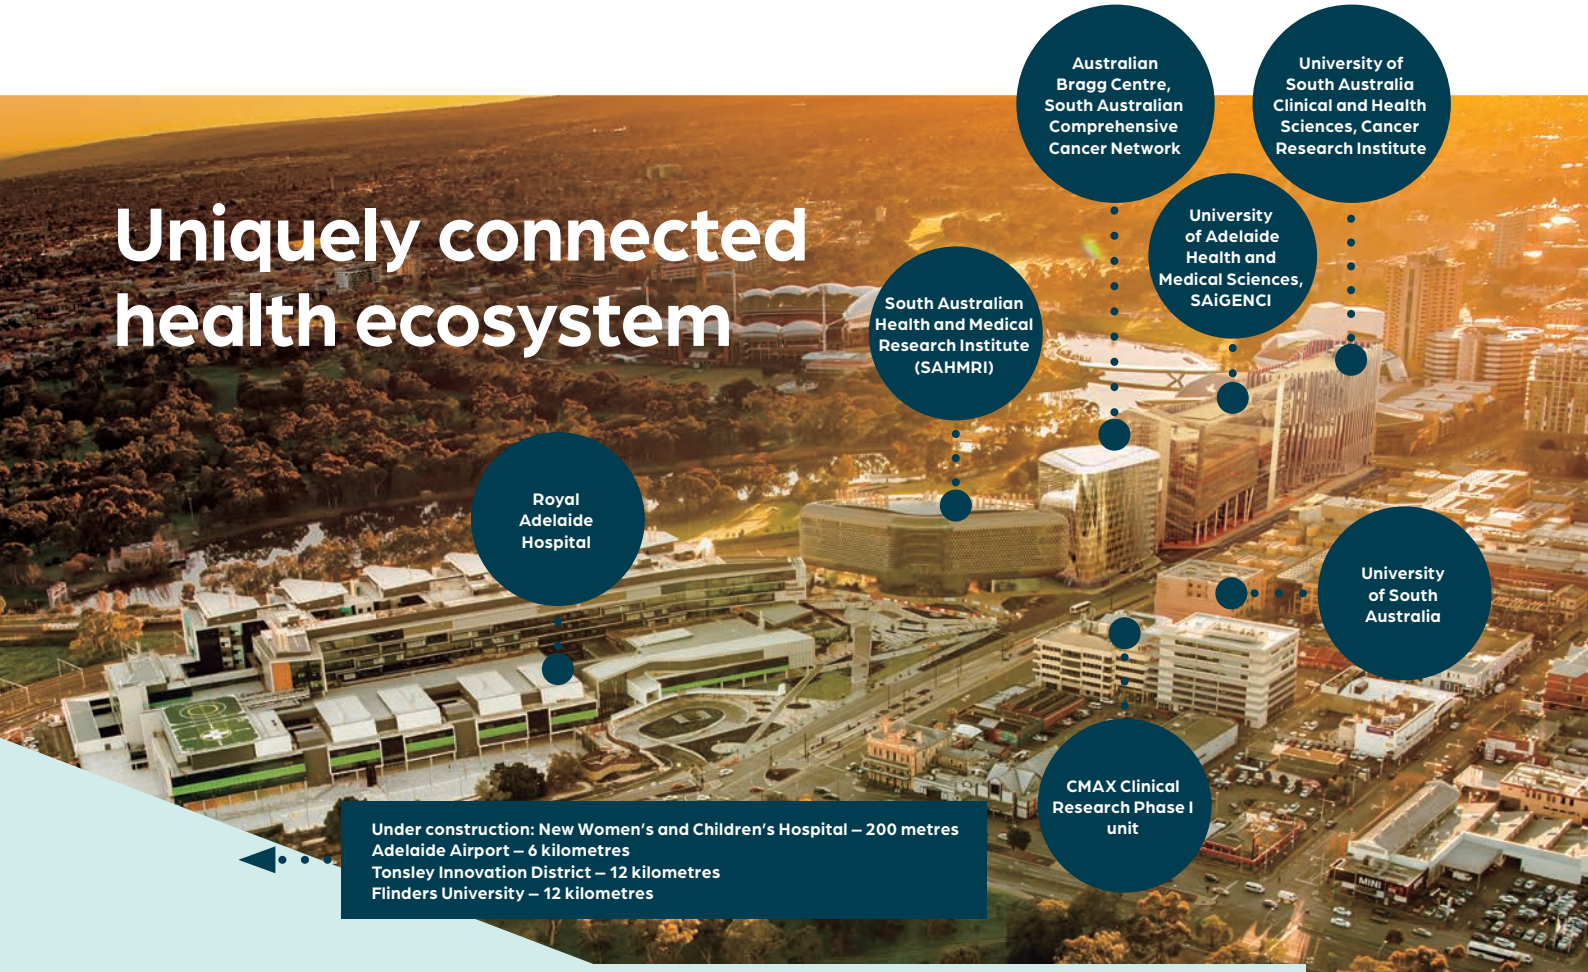

RDI Partners has supported over AUD$750 million in R&D investments by foreign owned biotech companies in Australia operating through an Australian presence.

The RDI Partners competitive advantage is underscored by:

- A full-service model, including company establishment and structuring, resident director, accounting and tax, R&D tax, advanced/overseas findings and finance
- Depth of technical knowledge in R&D tax, biotechnology and corporate structuring
- Track record of seamless service delivery, R&D tax outcomes and overseas finding successes
- Strength of relationships with clinical service providers through Australia
- Low-cost and low-risk pricing model of a fixed quoted fee where fees are linked to outcomes with no ongoing retainers or monthly charges.

rdipartners.com.au

Uniquely connected health ecosystem

South Australia is characterised by deep clinical research, manufacturing and an end-to-end value chain supported by world-class infrastructure and digital capabilities. It is an exceptionally collaborative and connected ecosystem for drug development, advanced manufacturing and data-driven health innovation. **This makes Adelaide and South Australia the perfect location to collaborate, innovate and trial new products, ready for global commercialisation.**

Adelaide BioMed City

With over 30 clinical trial rooms, Adelaide BioMed City is one of the most technologically advanced health and life science research districts globally and is located right in the heart of Adelaide. Comprised of leading-edge anchor institutes and companies that cluster and connect with start-ups, business incubators and accelerators, the AUD$3.8 billion innovation district offers mixed-use infrastructure where researchers, clinicians and students work together with entrepreneurs and leading industry players. Adelaide BioMed City aspires for global significance through high impact translational research that, when commercialised, drives positive tangible healthcare improvements nationally and internationally.

With more than 2,000 researchers and 10,000 staff, Adelaide BioMed City brings together institutes and centres from health and life sciences, clinical care, research, education and industry. The district is home to a range of specialist research institutes and organisations that are supported by a world-class genomics capability, a cancer research biobank and the country's largest public pathology and medical imaging capabilities.

Combining Australia's most experienced end-to-end clinical trial supply chain with a regulatory framework that provides the fastest pathway to first-in-human (FIH), Adelaide BioMed City enables clinical trial conduct for submission to global regulatory agencies. Adelaide BioMed City incorporates state-of-the-art, FDA-accredited Good Manufacturing Practice (GMP) manufacturing, servicing research and development to commercial scale.

The district is built around the Royal Adelaide Hospital (RAH) and the South Australian Health and Medical Research Institute (SAHMRI), offering a true bench-to-bedside capability with a key focus on research translation to improve health outcomes for patients.

Adelaide BioMed City is home to key health and medical research institutions including:

- South Australian Health and Medical Research Institute
- Royal Adelaide Hospital
- The University of Adelaide Health and Medical Sciences and South Australian immunoGENomics Cancer Institute
- University of South Australia Cancer Research Institute.

Public clinical sites

Central Adelaide Local Health Network (CALHN)

The Central Adelaide Local Health Network (CALHN) is South Australia's largest health network, covering almost 30 per cent of the population. With over 17,000 staff and more than one million patients , they deliver public health services to two major Adelaide hospitals, the Royal Adelaide Hospital and The Queen Elizabeth Hospital, and a range of rehabilitation and mental health facilities.

Royal Adelaide Hospital

The 800-bed Royal Adelaide Hospital is one of Australia's most technologically advanced healthcare facilities and the state's flagship hospital, providing a comprehensive range of the most complex clinical care to an estimated 85,000 inpatients and 400,000 outpatients each year.

Located within Adelaide BioMed City, the state-of-the-art facilities appeal to healthcare professionals, helping to attract some of the best expertise from around the world.

The Royal Adelaide Hospital features:

- a purpose-built Clinical Trials Centre with advanced facilities built to meet the needs of clinical trial patients and optimise patient flow
- leading telehealth facilities that enable staff to consult with colleagues and patients in regional and remote areas across the state and further afield, while digital imaging technology allows clinical images to be streamed live from operating theatres and procedural rooms for diagnostic and training purposes
- the largest automated microbiology system, providing world-class technology to support the timely diagnosis and treatment of infectious diseases
- one of the biggest automated pharmacy distribution systems in the nation, bringing South Australia to the forefront of automated medication technology
- the state's only public hospital with a digital instrument tracking system to manage its vast collection of medical equipment.

Supported areas include:

- Adult prevention and recovery care (PARC) - anaesthetic
- Cardiology
- Cardiometabolic
- Gastroenterology and inflammatory bowel disease
- Gastrointestinal and pancreatic disease
- Haematology
- Immunology and allergy
- Infectious diseases
- Memory
- Neurology and neurosurgery
- Neurology movement disorders
- Nuclear medicine
- Oncology
- Ophthamology
- Orthopaedics and trauma
- Rheumatology
- Spine Service.

Adelaide EpiCentre

The Adelaide EpiCentre (Centre for Clinical Epidemiology) is a state-of-the-art health informatics, biostatistics, health economics and epidemiology centre. Its research activities revolve around clinical epidemiology with the aims of improving access to and outcomes of health care.

Based at the Royal Adelaide Hospital, the Adelaide EpiCentre's objectives are to grow research and research translation; support clinical researchers with advice, training and mentorship; and optimise health service delivery through data-driven insights.

Some of the Centre's key functions are:

Support in clinical and applied research

- Advice on study design and clinical epidemiology
- Advice and support for data management (e.g., linked data) and analyses (e.g., biostatistics)
- Advice about ethics and governance issues related to data use in a health setting.

Health services research

- Facilitate the use of routinely collected health and EMR data for research and service improvement
- Use of data to drive health service planning and evaluation.

Research translation and implementation

- Support to improve the real-world relevance of research
- Support for implementation of research findings into practice and policy.

Health economics

- Quantification of the economic burden of ill-health
- Economic evaluation of health interventions complementary to other fields of research
- Evaluation of the impact of health programs in hospitals or other settings, to refine programs and inform practice and policy.

Teaching, training and mentorship

- Supervision of higher research degrees
- Research mentorship
- Short courses
- Ad-hoc advice to clinicians, researchers and students.

The Queen Elizabeth Hospital

The Queen Ellizabeth Hospital is a 355 bed, acute and sub-acute care teaching hospital that provides inpatient, outpatient, emergency and mental health services to a population of more than 250,000 people living primarily in Adelaide's western suburbs.

Clinical trials

The Queen Elizabeth Hospital Cancer Clinical Trial Unit specialises in the conduct of first-in-human studies to Phase IV and extended access programs across a broad range of haematology and oncology indications and has participated in more than 400 studies.

The Basil Hetzel Institute for Translational Health Research

The purpose-built Basil Hetzel Institute for Translational Health Research is the productive research arm of The Queen Elizabeth Hospital. It is located opposite the main campus of The Queen Elizabeth Hospital, just 8 minutes from the Royal Adelaide Hospital. Research themes include cardiovascular disease, cancer, chronic inflammatory disease, population epidemiology, transplantation immunology, vascular surgery, drug response, stroke, as well as surgical technologies and training.

Over 180 researchers in more than 25 research groups have strong links to clinical divisions within The Queen Elizabeth Hospital, underpinning translational health research. The 'bench-to-bedside' approach is at the forefront of an emerging area of medical science that aims to improve public health through collaborative discoveries and innovations in patient care, education and research.

The Basil Hetzel Institute for Translational Health Research has long-standing teaching and research affiliations with The University of Adelaide, the University of South Australia and Flinders University, which offer a range of undergraduate and postgraduate research training opportunities.

Supported areas include:

- Cardiometabolic
- Inflammatory bowel disease
- Intensive care
- Memory
- Oncology
- Surgery.

Southern Adelaide Local Health Network (SALHN)

The Southern Adelaide Local Health Network (SALHN) provides care for approximately 350,000 people living in the southern metropolitan area of Adelaide as well as providing a number of statewide and regional services. It has a strong reputation for the quality of its scientific and medical research.

The SALHN Research Hub, a critical mass of research and clinical trial service, provides an environment that promotes collaboration in research and improvement. The Hub aims to work with partners to make SALHN a premier and preferred site to conduct investigator-initiated research and sponsored clinical trials across a broad range of disciplines.

Currently, over 300 clinical trials are being conducted across more than 60 departments, including but not limited to:

- Gastroenterology
- Haematology
- Medical oncology and mental health
- Neurology
- Respiratory medicine.

Flinders Medical Centre

Part of the Southern Adelaide Local Health Network (SALHN), Flinders Medical Centre (FMC) is the largest hospital in the southern metropolitan area of Adelaide and one of two major trauma centres in the state with around-the-clock emergency retrieval service bringing patients to the hospital by road or helicopter.

FMC counts with more than 5,000 skilled staff providing an extensive range of services for patients of all ages.

The hospital is co-located with the Flinders University School of Medicine and Flinders Private Hospital, and also the base for the South Australian Eye Bank. FMC has earned an international reputation as one of Australia's finest public teaching hospitals and a centre for research excellence.

Clinical trials

The Department of Medical Oncology at FMC provides a comprehensive specialist service for patients with cancer. The Oncology Team at FMC treat patients diagnosed with any solid-tumour cancers, using their team of Allied Health professionals to support patients and carers with physical and psychological needs. The Department of Medical Oncology is involved in a number of clinical trials investigating new or potentially improved cancer treatments. Treatment trials for most common cancers including breast, prostate, metastatic melanoma, pancreas, lung, colon and gastricoesophageal cancer are in progress.

Other supported areas of research include:

- Audiology
- Cardiology
- Cardiothoracics
- Gastroenterology
- Haematology Clinical Trials Unit (HCTU)
- Hepatology
- Intensive Care Unit (ICU) Clinical Trials Unit
- Neurology
- Ophthalmology
- Orthopaedics and trauma
- Palliative Care Research
- Renal
- Respiratory
- Rheumatology
- Southern Adelaide Diabetes and Endocrine Services (SADES) Clinical Research.

Northern Adelaide Local Health Network (NALHN)

The Northern Adelaide Local Health Network (NALHN) delivers services to more than 400,000 people living in the north and north-eastern suburbs and regional areas of Adelaide. These areas of currently have the highest population growth in South Australia, expected to grow to over 456,000 people by 2030, with every age group experiencing an increase.

NALHN's major redevelopments are taking shape, with the $130 million Modbury Hospital upgrade and the $47 million Lyell McEwin Hospital (LMH) expansion well underway, increasing health care capacity in the north and north-east.

NALHN includes the Lyell McEwin Hospital (LMH) and Modbury Hospital, major tertiary hospitals in South Australia, a range of sub-acute and primary health care services and a number of state-wide services.

Clinical trials

NALHN has a broad range of clinical trial facilities, dedicated clinical trial managers for sponsored studies, and specialist research groups for the areas including below:

- Northern Adelaide Neurology Clinical Trial Unit
- Northern Adelaide Cancer Centre Clinical Research Unit
- Lyell McEwin Hospital Intensive Care Research Unit
- Lyell McEwin Hospital Clinical Trials Unit.

Lyell McEwin Hospital

The Lyell McEwin Hospital (LMH) is a major tertiary hospital located north of Adelaide, South Australia that provides medical, surgical, diagnostic, emergency and support services.

The LMH Clinical Trials Unit, is a dedicated, purpose-built area within the hospital that runs Phase II-IV clinical trials for many of the world's leading pharmaceutical and biotechnology companies. The Unit upholds stringent observation of the international regulatory requirements that facilitate the practice of the highest standards in clinical research.

The Clinical Trial Unit conducts trials and has a dedicated research team for the following indications:

- Cardiology
- Endocrinology
- Gastroenterology
- Gastroenterology and hepatology
- Psychiatry
- Renal
- Respiratory.

Trial staff are Good Clinical Practice (GCP)-certified and highly experienced in the use of electronic data capture, electronic capture patient reported outcomes (PROs), conducting ECGs, venepuncture, processing and shipping laboratory samples.

Women's and Children's Health Network (WCHN)

Women's and Children's Hospital

The Women's and Children's Hospital is South Australia's largest specialist facility for women's and children's health. It is South Australia's leading provider of care for children with acute and chronic conditions in South Australia and the state's largest maternity and obstetric service.

Highly regarded as a centre for research, the Women's and Children's Hospital works with all three South Australian universities in the training of hundreds of health professionals each year. The Women's and Children's Hospital aims to be a leader in quality health research, partnering with other agencies, and translating research into innovative and improved services.

WCHN is home to over 200 researchers, currently undertaking more than 400 projects, with over 200 publications every year.

Clinical trials

World-leading clinical trials conducted at the Women's and Children's Hospital in departments and units are including but not limited to:

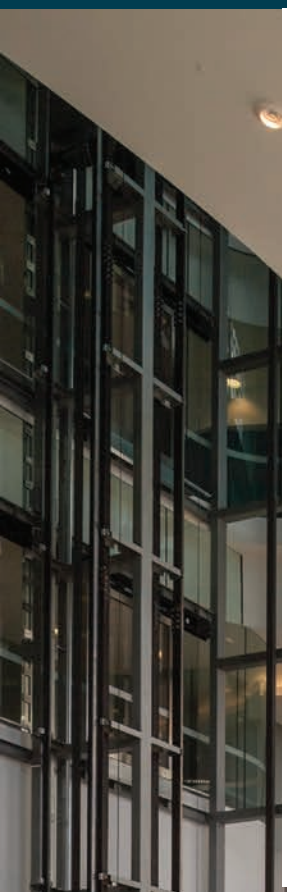

- Department of Anaesthesia
- Department of Endocrinology
- Department of Gastroenterology
- Department of Neurology and Clinical Neurophysiology
- Department of Respiratory and Sleep Medicine
- Department of Rheumatology
- Michael Rice Centre for Haematology and Clinical Oncology
- Paediatric Emergency Department (PED)
- Robotics Unit
- Women's and Babies' Unit (WABs).

Research organisations

South Australian Health and Medical Research Institute

South Australian Health and Medical Research Institute (SAHMRI) is the state's flagship health and medical research institute, focused on delivering better and more equitable healthcare through four major research themes: precision cancer medicine, lifelong health, women and kids, and Aboriginal health equity. It is home to over 800 medical researchers, partners, students and support staff.

SAHMRI has significant clinical trial expertise and provides a central resource for conducting and coordinating clinical trials. SAHMRI's Clinical Trials Platform together with the Biostatistics Unit, provide professional services and support for researchers and industry sponsors who need assistance at any stage of the clinical trials life cycle, including grant development, statistical support and all aspects of clinical trial design and conduct. Their vision is to accelerate the translation of research into real-world impact by providing exceptional, participant-centred clinical trial services and support.

Registry Centre

The SAHMRI Registry Centre provides an important and rich source of translational and observational research data. It brings together a collaboration of registries, including those based within SAHMRI, as well as member registries based externally, that span patient populations across South Australia, Australia and New Zealand.

Clinical trials

SAHMRI has a well-established reputation in the conduct and independent oversight of local, national, and international phase Ib to IV clinical trials covering a diverse range of therapeutic areas including cardiology, oncology, nutrition, metabolic disorders, immunology, paediatrics, pregnancy and medical devices.

The Clinical Trials Platform provides:

- easier, more equitable access to trial involvement for patients and the public
- innovative ways to design and conduct clinical trials that prevent disease or deliver treatments faster by using new and emerging technologies
- support for researchers and industry sponsors who need assistance at any stage of the clinical trial life cycle which includes grant development, statistical support and all aspects of clinical trial design and conduct
- support for rapid and efficient study start-up including assistance with ethics submissions, contract development and negotiation
- high quality systems and processes that underpin clinical trial conduct to ensure alignment to best practice examples.

Preclinical and Imaging Research Laboratories

SAHMRI is home to the Preclinical and Imaging Research Laboratories, and Clinical and Research Imaging Centre and in this way can work with universities, institutions, and industry to progress therapies and imaging agents through the translational pipeline, from preclinical studies to the clinic.

Molecular Imaging and Therapy Research Unit (MITRU)

Located within the South Australian Health and Medical Research Institute (SAHMRI), the Molecular Imaging and Therapy Research Unit (MITRU) is dedicated to the research, development and manufacture of radiopharmaceuticals. Home to South Australia's only cyclotron - a particle accelerator that produces radioactive isotopes for use in medical imaging, treatment and research, MITRU supplies radiopharmaceuticals to hospitals and imaging centres all over Australia for medical use, research purposes and clinical trials.

MITRU is GMP-accredited by the Australian Therapeutic Goods Administration (TGA) as a radiopharmaceuticals manufacturer and, in a world-first for cancer imaging, it was the first recipient of a TGA licence to manufacture fluorinated prostate specific membrane antigen for clinical use in 2019.

MITRU specialises in positron emission tomography (PET) imaging tracers. These tracers are bound to an appropriate radionuclide and target specific cells in the body. The patient is then scanned, and the emitted radiation is detected by a PET scanner. The scanner then combines the reading with a CT scan to show where in the body the target cells are located. Tracers used in PET imaging include those used to diagnose cancer as well as Alzheimer's and Parkinson's diseases. The radioactive isotope linked to the tracer is either produced using the SAHMRI cyclotron (ie Fluorine-18, Copper-64, Zirconium-89) or sourced externally (ie Lutetium-177, Gallium-68).

Tracers used in the PET imaging of cancer can also be bound to radionuclides that can be used to treat cancer. This field of medical research, theranostics – a combination of therapy and diagnostics – is a strong focus of the MITRU facility and its many partnerships with industry.

South Australian Comprehensive Cancer Network (SaCCaN) – Commission for Excellence and Innovation in Healthcare (CEIH)

The Commission on Excellence and Innovation in Health (CEIH) in South Australia is a uniquely positioned independent government agency established to lead and drive innovation and improvement in healthcare through the establishment of diverse connections across the broad health ecosystem. The CEIH approach is focused on building collaborations, partnerships and networks to create linkages and connections. We deliver new perspectives that harness the power of connection across consumers, clinicians, private, public and community agencies, researchers and academics and industry bodies, informed by data and evidence, to work together, creating health and prosperity for all.

CEIH is hosting the establishment of a comprehensive cancer network capable of navigating in a complex and dynamic environment with a focus on sustainability and high-quality cancer care across the service spectrum promoting system-level collaboration, knowledge sharing, and driving collective agendas, leveraging research and data to guide improvements in equity in cancer care outcomes, maximise cancer prevention and early detection, enhance the consumer experience, and deliver health systems for optimal care.

The South Australia Comprehensive Cancer Network (SACCaN) will establish a network of expertise from across the state, with linkages to other jurisdictions, delivering initiatives that align with national and state cancer plans and supporting the national agenda under the Australian Comprehensive Cancer Network and Framework. SACCaN will build the foundations to ensure the state is equipped to reduce rural and remote travel to metropolitan locations for cancer care and treatment; allow capacity and infrastructure for future treatment, research and clinical trials, and future demand for services; and improve health equity across the state.

Bragg Centre

Located in the heart of Adelaide, within Adelaide BioMed City, the Centre provides unmatched accessibility to a world-class, highly connected health and life sciences precinct that links with the most complete clinical trial ecosystem in Australia, world-leading AI and data analytics capabilities and a thriving cluster of medtech companies.

PARC Clinical Research (University of Adelaide/ CALHN)

PARC Clinical Research, led by Professor Guy Ludbrook, is a high-acuity clinical trials unit within the Royal Adelaide Hospital (CALHN) and is developed in collaboration with the University of Adelaide. This University-based research group conducts specialised research across multiple disciplines and undertakes contract clinical research for the pharmaceutical and biotech industries. The unit aims to provide a safe and suitable environment for academic clinical studies while meeting the continuing demand for high-quality clinical research infrastructure in the South Australia, building research capacity, and fostering healthcare innovation and collaboration.

PARC has extensive experience in conducting clinical trials across a broad range of therapeutic areas and development stages, from Phase I through to Phase IV. PARC has extensive experience in the management of compounds with narrow therapeutic indices, such as opioids and products in the early phases of development, which often require specialised monitoring and management. In addition, PARC's highly specialised clinical facility is equipped for intensive monitoring of high-risk therapies, with non-hospital allocated beds for overnight and participant studies. The facility's expertise also extends to the dosing and handling of Schedule 8, intravenous, and infusion therapies.

Located within the Royal Adelaide Hospital and complementing other trials units within the Health Precinct, PARC has access to a large number of specialist clinicians, many of whom require a flexible and unique facility such as PARC to conduct their clinical research studies or who can provide patient referrals. PARC provides safe, high-quality facilities with ready-access to clinicians and diagnostic services for the management of a wide range of medical conditions. The experienced nursing staff, combined with the research expertise of the unit, ensures that trials are conducted to the highest standards of care and safety.

Flinders Health and Medical Research Institute (FHMRI)

Flinders Health and Medical Research Institute is a leading centre for life-changing medical and health research at Flinders University. They focus on addressing some of the most pressing health concerns of our time, driven by the bold ambition to eliminate disease, combat health inequities and improve outcomes for all.

Co-located at Bedford Park, south of Adelaide, Flinders main campus is part of the Flinders Health Precinct, home to one of Australia's busiest public hospitals, Flinders Medical Centre, Flinders Private Hospital and the newly completed Health and Medical Research Building (HMRB). The HMRB houses cutting-edge laboratory and clinical research facilities for over 400 researchers, technology platforms (such as the SA Genomics Centre, proteomics, flow cytometry, microscopy), enabling platforms, including the Flinders Clinical Trials Unit and the Statistics, Epidemiology and Data Analytics Unit, and pre-clinical facilities.

FHMRI's research strengths include:

- Sleep Health Flagship Program – World-leading, transdisciplinary research aimed at advancing knowledge of sleep, sleep disorders and developing new treatments to improve sleep
- Eye and Vision Flagship Program – Research focussed on genetic risk prediction for early treatment of glaucoma and diabetic retinopathy, as well as inflammatory and infectious eye diseases
- Health Equity Impact Program – Research focussed on Aboriginal and Torres Strait Islander Health and Public Health
- Cancer Impact Program – Home to leading oncology clinical trialists, with research focussed on population screening, high-risk surveillance, cancer prevention and survivorship
- Neurosciences – An emerging area of strength, focussing on degenerative diseases, gut-brain axis, pain research, and associated therapies and diagnostics.

Flinders Clinical Trials Unit

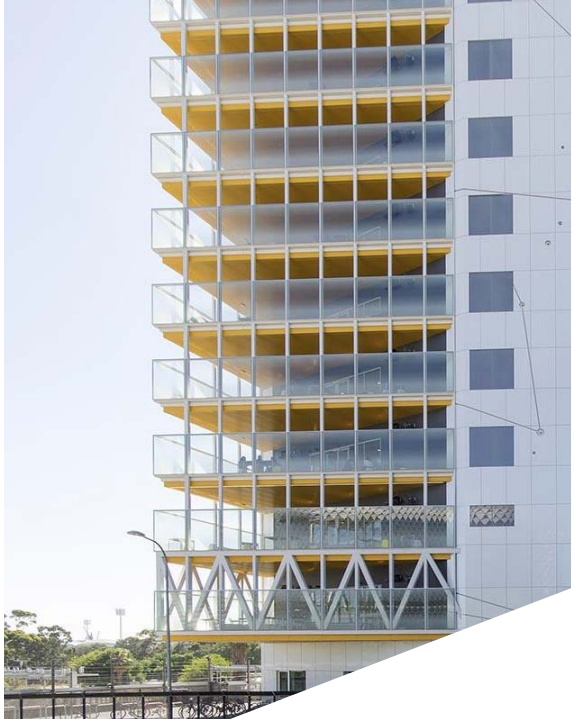

Flinders Clinical Trials Unit provides expert, specialised and patient-centred clinical research services and support.

The team offers clinical research and professional expertise to help advance research outcomes. They consist of multi-disciplinary specialists ready to assist in refining proposals, collaborating, scaling, budgeting, designing and delivering impactful clinical research.

The Flinders Clinical Trials Unit can harness existing strengths and incorporate modern methodologies to develop and implement clinical research effectively, converting it into evidence that supports the translation of research into improved health services and community outcomes.

The expertise spans all stages of the research timeline, including proposal development, research design, execution, collaboration, and budgeting. The team has decades of combined experience in conducting studies in accordance with protocols, standard operating procedures (SOPs), and good clinical practice (GCP) guidelines.

Flinders Clinical Trials Unit support clinical research delivery across a wide range of therapeutic areas, whether for industry-funded studies or investigator-driven grant funded research, at local, national or international levels.

South Australian immunoGENomics Cancer Institute

The South Australian immunoGENomics Cancer Institute (SAiGENCI) is an independent medical research institute focusing on cancer research and clinical trials, including new cutting-edge technologies in immunotherapies and genomics.

SAiGENCI is jointly resourced by the Australian Department of Health, Central Adelaide Local Health Network and the University of Adelaide. The Institute collaborates with centres of excellence across the globe, delivering world-class and life-changing treatments and outcomes for cancer patients.

SAiGENCI's objectives include:

- forging strong research collaborations
- developing and testing new technologies and discoveries
- improving treatment and care options for people living with cancer
- training South Australian clinicians
- commercialising new discoveries.

Principal research areas include:

- drug discovery and development
- tumour inflammation and immunotherapy
- computational systems oncology
- epigenetics
- single cell and spatial technologies.

Case study: The Daisy Project – Advancing radiation protection and cancer treatment

In a recent major outcome from SAiGENCI and the University of Adelaide, researchers of these institutions developed SAi001, which offers critical protection from the immediate and lasting impacts of radiation with potential uses for the space, defence and mining industries and for cancer treatment. under The Daisy Project, the plant-derived active pharmaceutical ingredient of SAi001 exhibits radiation protection effects while also having anti-tumour and anti-inflammatory activities.

The project team is currently working with industry partners in Australia and the United States to progress the product to human clinical trials, regulatory approvals and commercial production after extensive pre-clinical pharmaceutical studies' promising results.

Another focus for the team is a second drug called SAi002, which is predicted to be a ground-breaking cancer treatment that could help patients with metastatic cancers, including breast, prostate, and lung cancer as well as haematological cancers-like lymphomas and leukemias.

Robinson Research Institute

The Robinson Research Institute at the University of Adelaide is a collective of internationally leading researchers addressing reproductive and early life origins of health and disease with world-leading research in:

- child and adolescent health.
- early origins of health
- fertility and conception
- pregnancy and birth.

Their 45+ research teams are uncovering how events and circumstances before birth and during early life impact an individual's healthy development, their susceptibility to disease and their resistance to adversity. These discoveries are being used to develop effective interventions to protect children and improve their health prospects throughout life.

Their research is novel as it includes the critical period prior to conception. As the preconception period is critical for a healthy pregnancy and establishing the health trajectory of the developing fetus, they also consider the health, environment and social circumstances of prospective parents.

Robinson Research Institute's 400+ members manage research projects, clinical trials and cohort studies, and collaborate across many disciplines including biomedical, clinical, social, and epidemiological science to generate new discoveries that will improve reproductive health in parents and tackle life-long health in children.

Case study: The IMAGENDO® study: revolutionising endometriosis diagnosis through AI

Two University of Adelaide research institutes – the Robinson Research Institute and the Australian Institute for Machine Learning (AIML) – are harnessing the power of artificial intelligence (AI) to revolutionise endometriosis diagnosis. By combining ultrasound, magnetic resonance imaging (MRI), and AI, the researchers aim to make IMAGENDO® a cost-effective, accessible, and accurate new way to reduce the need for surgery and the time it takes to receive a diagnose.

The AI algorithm is trained using a large dataset of ultrasounds and MRIs, enabling it to recognise endometriosis markers with accuracy comparable to that of a specialist endometriosis doctor. This will enable other sonographers and doctors to achieve similar diagnosis rates.

With earlier diagnosis, IMAGENDO® technology will lead to prompt treatment and better quality of life by avoiding unnecessary hospitalizations and repetitive surgery. IMAGENDO® could also help preserve fertility by allowing for early interventions like egg freezing.

IMAGENDO® is increasingly recognised globally and is expanding across Australia and internationally with collaborations in North America, South America, Southeast Asia, the United Kingdom, and Europe.

World–class innovation places

Our sectors co-exist in hi-tech hubs and research centres, forging collaborative ecosystems that open doors and inspire new ways of thinking.

Roseworthy Campus 61kms from central business district

Part of the University of Adelaide, a hub of undergraduate teaching, postgraduate training, research and clinical services with an international reputation for excellence in dryland agriculture, natural resource management and animal production.

Edinburgh Defence District 34kms from central business district

Key national defence research, manufacturing and sustainment hub housing the RAAF Base Edinburgh, Defence Science and Technology Group and major defence companies.

Edinburgh Parks Precinct 34kms from central business district

The precinct is part of a key food manufacturing, food service, defence and transport industry hub. Located in a major industrial growth corridor connected by Adelaide's Northern Expressway and located adjacent to some of South Australia's fastest growing council areas ensuring access to suitable labour.

Osborne Naval Precinct 26kms from central business district

Australia's premier naval industry hub and one of the world's most technologically advanced naval shipyards in the world, which includes new capability to build the SSN-AUKUS nuclear submarines.

Technology Park 17kms from central business district

Hub for systems development and integration, information communications technology, advanced manufacturing and electronics, and home to over 100 small to medium enterprises, multinationals and start-ups.

Adelaide BioMed City Adelaide central business district

AUD$3.8 billion health and medical innovation district with leading-edge anchor institutes, including the South Australian Health and Medical Research Institute (SAHMRI) and the Royal Adelaide Hospital (RAH), and companies that cluster and connect with start-ups, business incubators and accelerators.

The University of Adelaide Adelaide central business district

With three main campuses in South Australia, and over 150 years of educational experience, recognised globally as a leading research university ranked in the world's top 130 universities. Distinguished alumni of five Nobel Laureates, over 100 Rhodes Scholars, including Australia's first Indigenous recipient, and Australia's first female prime minister and Supreme Court judge.

Lot Fourteen Adelaide central business district

Australia's first ideas and innovation neighborhood and home to the Australian Space Agency, SmartSat CRC, Defence and Space Landing Pad, Stone & Chalk start-up hub, MIT Adelaide Living Lab, Australian Institute for Machine Learning and the Australian Cyber Collaboration Centre.

University of South Australia Adelaide central business district

Australia's University of Enterprise on the global stage; partnered globally and nationally with academic, research and industry leaders with six campuses. Offering degree programs including business, law, education, arts and social sciences, health sciences, information technology, engineering and the environment.

Waite Research Precinct 7kms from central business district

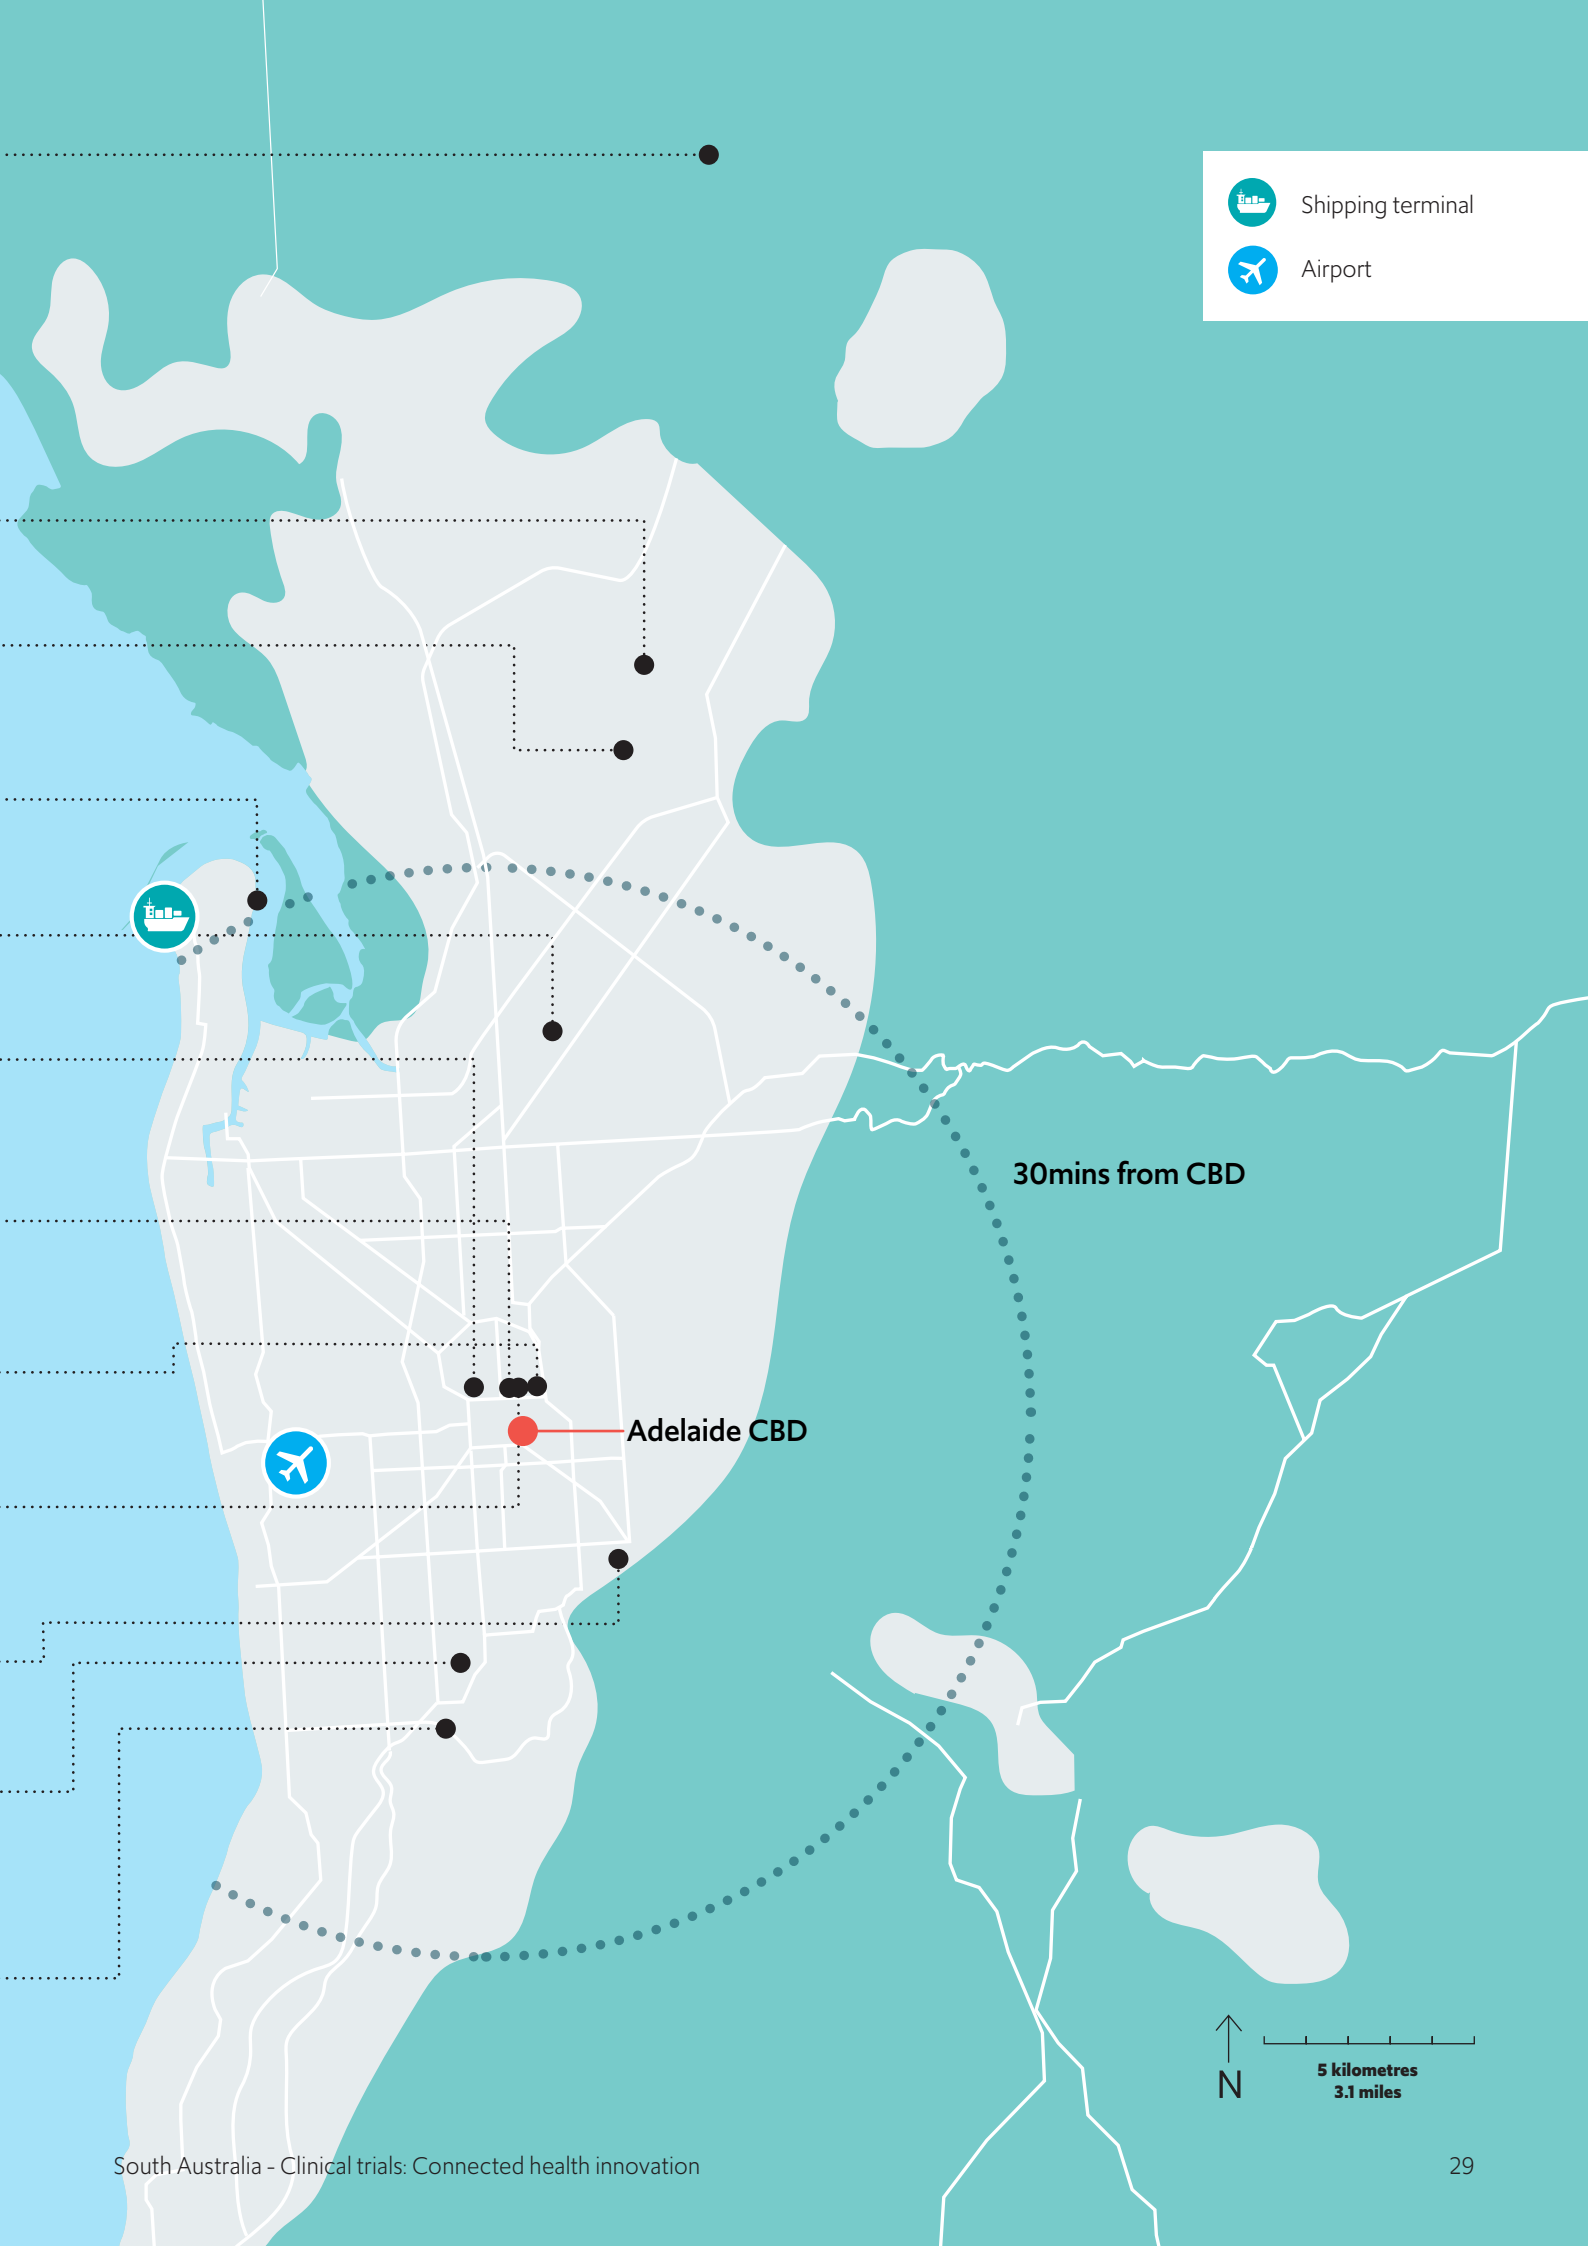

Part of the University of Adelaide, home to the largest concentration of agriculture and wine research and teaching expertise in the Southern Hemisphere and a leading centre of Australian research capability in wine, grains, soil and plant breeding.

Tonsley Innovation District 12kms from central business district

Home to high-value manufacturing industries including defence, health, medical devices and assistive technologies, clean tech and renewable energy, software and simulation, and minerals and energy services. Home to Flinders Factory of the Future advanced manufacturing test bed, South Australia Drill Core Reference Library, SA-H2H Hydrogen Technology Cluster, Hydrogen Park SA, BAE Systems Maritime Australia, Micro-X and the Medical Device Research Institute.

Flinders University 13kms from central business district

For over 50 years, Flinders has been a centre of inspiring achievement, from pioneering research and excellence in teaching to the positive impact the university has on the communities it serves. Three main campuses provide future-focused, internationally recognised degrees with flexible study options.

3.1 miles

Lot Fourteen Innovation District

Adelaide's leading district for accelerating innovation, entrepreneurship, research and education.

Location: Adelaide CBD

Focus: Emerging industries, defence, space, hi-tech, and creative industries. Lot Fourteen's curated community connects universities, researchers, entrepreneurs, start-ups and companies, such as:

- MIT Connection Science: Adelaide Living Lab
- The University of Adelaide
- Australian Institute for Machine Learning
- Australian Cyber Collaboration Centre
- Australian Space Agency
- Defence and Space Landing Pad
- Stone&Chalk start-up hub.

Commercial tenants include Microsoft Azure, Commonwealth Bank, Amazon Web Services Applied Sciences and Salesforce.

Tonsley Innovation District

Global benchmark for reimagining and redeveloping traditional and high-value advanced manufacturing facilities.

Location: 10 kilometres south of the Adelaide CBD

Focus: High-value manufacturing and innovation, connecting leading-edge research and education institutions, established businesses, start-ups, incubators and accelerators, government and the community.

Focus sectors:

- health, medical devices and assistive technologies
- software and simulation
- cleantech and renewable energy
- mining and energy automation.

Capabilities include:

- Global Centre for Modern Ageing
- Flinders Digital Health Research Centre
- Micro-X
- Zeiss
- Flinders Factory of the Future
- BAE Systems Maritime Australia
- Siemens Energy
- Hydrogen Park SA
- Flinders University – Tonsley.

Leading the nation in AI for healthcare

South Australia is well-placed to be a global leader in medical artificial (AI) intelligence thanks to its abundance of digital health assets and its research capability. Adelaide is Australia's home for AI and data analytics-driven innovation and is leading the nation in AI for healthcare.

With a robust healthcare system and advanced data management capabilities, the state is uniquely positioned to develop, apply, and commercialise AI solutions for global health problems. South Australia is embracing the ability for AI to deliver the biggest transformative impact to healthcare.

South Australia has a proven history of effective government, industry and academia collaboration, delivering greater efficiency in the health system, optimising operational and clinical decision-making and improving patient outcomes.

South Australia's integrated health ecosystem, combined with its globally unique datasets, provides the state with a distinct advantage in AI-driven personalised healthcare innovation. Key assets enabling this industry transformation include world-leading hi-tech capabilities and SA Pathology's biospecimen assets and **a database of 3.5 million unique patient records, containing over 21 billion data points and more than 80 years of historical pathology data.**

Major AI research capabilities in South Australia include:

- The Australian Institute for Machine Learning (AIML)
- MIT Connection Science: Adelaide Living Lab
- Australian Research Centre for Virtual and Interactive Environment (IVE)
- Amazon Web Services
- The University of Adelaide's Centre for Augmented Reasoning.

Australian Institute for Machine Learning

Australia's first facility solely dedicated to artificial intelligence research. The Australian Institute for Machine Learning (AIML), one of Australia's largest AI capabilities, conducts globally competitive research and development in machine learning, artificial intelligence, computer vision and deep learning.

AIML is recognised for its world-leading research in AI ethics and safety in health capability, particularly in clinical imaging. It is partnering with the world's leading healthcare companies to ensure that patient safety is at the centre of the digital health innovation that will transform health outcomes for the global community. Together with leading global companies including Roche, GSK, and Medtronic, AIML is pushing the frontier of precision health.

Massachusetts Institute of Technology – Connection Science: Adelaide Living Lab

Partnering with Massachusetts Institute of Technology (MIT) Connection Science links South Australia to MIT's world-leading data analytics capabilities and the ability to bring together experts to develop, deploy, and test new technologies and strategies built on safe and trusted data sharing. The collaboration focuses on exploring and developing secure data exchange platforms in health, net-zero and trade finance. Together they are the foundation of the state's knowledge ecosystem, generating new expertise and technologies.

Industrial AI Research Centre

The University of South Australia's Industrial AI Research Centre is at the forefront of transforming healthcare with innovative AI and data-driven solutions. Their multi-disciplinary team of experts collaborates with healthcare professionals and organisations to revolutionise patient care, diagnostics and medical research.

Key focus areas include health data analytics and informatics, digital health and the development of AI-driven algorithms, with applications in healthcare decision-making and patient centric approaches.

Australian Research Centre for Interactive and Virtual Environments

The Australian Research Centre for Interactive and Virtual Environments (IVE) is a unique alignment of computer science, engineering, art, architecture and design. IVE is responding to the challenge of increased global demand for augmented reality (AR) and virtual reality (VR) technologies, with leading research including wearable computing, interface design, empathic computing, 3D visualisation, perception and telepresence. Their Design Research for Health and Wellbeing (DRHW) group is home to a cross-disciplinary network of professionals including researchers, computer scientists and healthcare workers, merging design, healthcare, and immersive digital experiences to help tackle major health and wellbeing issues.

Case studies: AI is changing the way we think health

Harnessing AI for preventative healthcare

Leveraging SA Pathology's 80-year long continuous pathology data and South Australia's advanced capabilities in emerging technologies, research labs in Adelaide have developed AI systems capable of identifying health risks in high-risk patients before they occur.

Based at the Royal Adelaide Hospital, researchers from AIML, SA Pathology, the MIT Connection Science-Adelaide Living Lab and IVE built a software system that alerts doctors if a patient is at higher risk of requiring hospitalisation.

By looking at the blood tests showing early signs of prediabetes and, if there are patterns and trends in certain geographic hotspots, doctors in those areas can get an early warning about what to focus on.

SA Pathology aims to further increase the use of AI to improve preventative health care, speed up manual time-consuming tasks and lower costs to deliver better public health outcomes, focusing on three key areas: clinical decision making, disease surveillance and population health management.

In addition to those three key areas, AIML's engineers are working towards ways of improving digital pathology services. Areas of interest include cell counting through a deep learning network to capture pathologists' annotations to learn how to trace each cell in an image, reducing the time pathologists need to work on pathology images.

SMART–PH – Digitising information for practice in public health

In a milestone demonstration of South Australia's AI expertise and capabilities, Flinders University is leading the development of Australia's first AI-driven integrated public health and clinical data platform, SMART-PH (DigitiSing InforMAtion for PRacTice in Public Health).

Designed to tackle the lack of real-time, high-quality public health data and pressing healthcare challenges, including pandemics and natural disasters, the SMART-PH project will create a common digital infrastructure capable of eliminating data silos and enabling real-time collaboration in healthcare decision-making. This is also particularly beneficial for improving healthcare in remote and rural regions.

Launched in 2024, the project was awarded nearly AUD$3 million from the Medical Research Future Fund 2023 National Critical Research Infrastructure initiative. Implementation and evaluation with key South Australian partners is scheduled from 2027 to 2029.

Global technology leaders are here

These leading technology companies continue to build around South Australia's connected technology ecosystem driving global businesses well into the future.

accenture

"We are incredibly proud of the success of our Adelaide capability and our contribution to the growth of Australia's sovereign capabilities. Adelaide is a highly attractive destination for companies and first-class talent looking to deliver technological and scientific excellence and we are privileged to be a part of this momentum.

Peter Burns,
CEO Accenture Australia and New Zealand

aws

"Amazon Web Services recognise that South Australia has a rich community of both innovation and entrepreneurship, and we're excited to continue to support our customers and partners in South Australia out of our office in the innovation district of Lot Fourteen in Adelaide."

Rianne van Veldhuizen,
Managing Director, Amazon Web Services ANZ

Commonwealth Bank

"The focus on Cyber Security and AI within Adelaide and Lot Fourteen, and the depth of the local talent pool in these topics are big attractors for us. AI and data are key to the next generation of digital personalisation, and the local focus on Augmented Reasoning, in particular, is very exciting when we think about how we can use AI technology to better empower our staff to serve our customers."

Brendan Hopper,
CIO for Technology, Commonwealth Bank of Australia

Deloitte.

"We have chosen Adelaide as the home of our first Australian Centre for Innovation and Technology because we have enormous confidence in the South Australian economy and the exceptional talent market that exists in the region."

Hendri Mentz,
Adelaide Office Managing Partner

Microsoft

"Having maintained a presence in South Australia for over 30 years, it has been wonderful to see the significant development of the local ICT industry over the last few years. Adelaide is fast becoming a hub for technology innovation and we're excited to continue our commitment to the state."

Mark Cuggy,
State Manager, South Australia

MIT Connection Science
the technology of innovation

"South Australia is quickly becoming a leader in the world's emerging digital economy, with its research leadership in data and AI, bringing partners from around the world to develop solutions relevant not only for Australia but also for the entire IndoPacific region."

Professor Alex 'Sandy' Pentland,
Massachusetts Institute of Technology
