SOUTH AUSTRALIA

Government of South Australia

Invest SA is a dedicated team of investment and business professionals within the Department of State Development that can connect you with opportunities, industry networks, and other government agencies in the defence and space sectors in South Australia.

The Invest SA, Defence and Space team offers specialist industry and investment advice in partnership with Defence SA and the South Australian Space Industry Centre (SASIC), the state's lead agencies in these sectors, to support your business growth.

In addition to Invest SA's in-house project managers, the Department of State Development boasts an extensive network of international offices spanning across 17 cities in 11 countries, available to provide in-market support for investors and exporters.

invest.sa.gov.au/defence | invest.sa.gov.au/space

Defence SA is South Australia's lead government agency for all defence matters, supporting the state's defence industry to create jobs and generate investment, bolstering South Australia's economic transformation.

defencesa.com

The **South Australian Space Industry Centre** (SASIC) provides a whole-of-state-government focal point, spearheading the advancement of space industry innovation, research and entrepreneurial development.

Introducing South Australia

Innovative defence and space ecosystem	More than 400 defence companies exist within a thriving network of primes, small to medium enterprises and start-up companies across advanced manufacturing, aerospace and maritime domains. More than 100 space organisations deliver innovative technologies and critical space services in both upstream and downstream segments, supported by a progressive defence ecosystem.
Research and education	World-renowned universities combined with national research centres including Defence Science and Technology Group (DSTG) and the SmartSat Cooperative Research Centre (CRC). Leading catalyst and incubator programs for start-up companies.
Infrastructure	Major upgrades and maintenance scheduled for key infrastructure across the state. Competitive construction costs for new infrastructure. Affordable land linked to transport corridors and key infrastructure for new projects and test and evaluation areas.
Workforce and capability	Industry contributing products and services into global and local supply chains for the build and sustainment of defence and space projects. Focus on Industry 4.0 technology development through leading innovation places at Lot Fourteen, Tonsley and Technology Park Adelaide. Government and industry investment in a highly skilled workforce in line with the strategies including *South Australian Defence Industry Workforce and Skills Action Plan.*

● Invest SA overseas offices

What SA offers investors

Invest SA helps facilitate:

- Identification of suitable locations
- Connections across government for approvals
- Attracting and retaining highly-skilled staff
- Introductions to industry partners and networking opportunities
- Planning and cross-government delivery of investment projects
- Connections with our global teams and identifying export opportunities

Our strengths = your opportunity

Our state offers unmatched competitive advantages

Strong geographical position: centrally located, globally connected

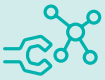

Highly skilled workforce with mainland Australia highest retention rates

Woomera Range Complex

Approximately the size of England, it remains the largest land-based test range in the western world

Edinburgh Defence Precinct

Key national defence research, manufacturing, and sustainment hub, including the RAAF Base Edinburgh, Defence, Science and Technology Group (DSTG) and BAE Systems Australia

Technology Park

A vibrant world-class business community of innovative, hi-tech organisations including Kongsberg, L3Harris, Lockheed Martin Australia, Northrop Grumman, Raytheon Australia and Saab Australia

Tonsley Innovation District

Brings together research, businesses, government and the wider community, 10 kilometres south of the Adelaide CBD

Lot Fourteen

Innovation precinct, home to the Australian Space Agency, Defence and Space Landing Pad recipients, SmartSat Cooperation Research Centre and the Australian Space Discovery Centre

7 of the world's top 10 defence companies

Boeing Defence Australia, Lockheed Martin Australia, RTX (Raytheon Australia), General Dynamics, BAE Systems, L3 Harris and Northrop Grumman have an established presence in the state

Commercial test, launch and return capability

South Australia has three unique spaceports supporting orbital launch, sub-orbital missions, orbital re-entries and range services for defence and aerospace organisations

Space sector strategy

South Australia was the first Australian state to develop a space strategy to drive innovation, research and development

Long and proud defence and space history

1980s

1987 – Collins-class submarine program approved; the fleet of six submarines to be built in Adelaide

1987 – Ground broken at Osborne; work starts on Australia's first submarine shipyard

1989 – Osborne submarine yard opens, anchoring South Australia's shipbuilding industry

1990s

1993 – HMAS Collins launched at Osborne; the first submarine ever built in Australia. Milestone validated Adelaide's sovereign design-and-build capability for complex underwater platforms

1996 – HMAS Collins commissioned, giving the Royal Australian Navy (RAN) its first Australian-built submarine

1996 – Dr Andrew ('Andy') Thomas was the first Australian-born NASA Mission Specialist aboard the Space Shuttle Endeavour

2000s

2007 – Defence SA is established as Australia's first state defence-industry agency

2007 – Beginning of construction of three Hobart-class Air Warfare Destroyers

2010 – Techport Common-User Facility opens with 9 300-t shiplift, turning Osborne into a world-class yard

2010s

2017 – HMAS Hobart commissioned; first Australian built destroyer showcases SA shipbuilding

2018 – Hunter class Frigate Program announced; six ships to be built at Osborne

2018 – Construction of first Arafura-class OPV begins at Osborne, kicking off SEA 1180

2018 – The Australian Space Agency commenced operations on 1 July 2018

2020

2020 – The Smart Satellite Technologies and Analytics Cooperative Research Centre is established in Adelaide as part of the Cooperative Research Centres Program

2020 – Opening of the Australian Space Discovery Centre and Mission Control Centre at Lot Fourteen

2021

2021 – SSN-AUKUS Submarine Program announced. South Australia identified as key partner and the construction site of the Australian submarines due to its established shipbuilding industry

2021 – Launch of the first Arafura class vessel with plans for multiple vessels to be constructed at the Osborne Shipyard

2021 – The Australian Space Agency will collaborate with NASA to send an Australian designed, built and operated semi-autonomous rover to the lunar surface later this decade

2022

2022 – Establishment of the South Australian Defence Industry Workforce and Skills Taskforce as a joint initiative between the Australian and South Australian Governments. The Taskforce would later release the South Australian Defence Industry Workforce and Skills Report and Action Plan

2022 – Launch of Kanyini Mission, a South Australian built small satellite for Earth observation

2023

2023 – AUKUS "Optimal Pathway" unveiled; Osborne expansion for SSN-AUKUS line begins

2023 – Defence Strategic Review released; surfacefleet reshape keeps six Hunter frigates in SA

2023 – Cooperation agreement between federal and state governments for nuclear-focused Skills Training Academy at Osborne Shipyard

2024

2024 – Announcement of A$2.2 billion Life-Of-Type Extension (LOTE) program of the Collins Class submarines at Osborne Shipyard from 2026, as part of the Naval Shipbuilding and Sustainment Plan

2024 – The A$200 million Deep Maintenance and Modification Facility of ADF's P-8A Poseidon maritime surveillance aircraft begins construction at the RAAF Base Edinburgh

2025

2025 – First-ever commercial spacecraft re-entry in Australia at Southern Launch's Koonibba Test Range, by Varda Space Industries. This positions South Australia as a global leader in launch and return services

2030+

2030s – Planned delivery of UK's first SSN-AUKUS (late 2030s)

2040s – Planned delivery of Australia's first SSN-AUKUS in the early 2040s - to be built in South Australia

South Australia: The defence state and maritime capital

With the highest growth of defence employment in the country[1], our state is leading Australia's defence agenda into the future through joint engagement between Australian and state governments. This is done by funding nation-leading initiatives, establishing a skilled workforce pipeline and partnering with world-leading higher education and research institutions to enhance our collaborative and defence-ready ecosystem.

The Defence State

South Australia is at the centre of the Australian Submarine Agency's once in-a-generation opportunity to build Australia's first fleet of SSN-AUKUS nuclear-powered submarines.

South Australia's success in the defence sector combines a strong history of highly skilled workforces, leading capabilities and the development of an engaged, supportive and collaborative ecosystem which includes: a global supply chain; access to leading defence primes; strategic intelligence; test and evaluation facilities; reconnaissance capabilities; and world-leading capabilities in artificial intelligence, data analytics and cyber security.

Major initiatives

South Australia holds a significant proportion of Australia's in-country defence materiel spend.

Working alongside education institutes, industry and the Australian Government, South Australia is home to major defence and security initiatives including[2]:

- Expansion of the Osborne Naval Shipyard to build what will become the world's most advanced naval construction facility with a Skills and Training Academy dedicated to producing the highly skilled workforce required to build SSN-AUKUS submarines, supporting the Australian Government's commitment to continuous shipbuilding
- Building of Australia's first fleet of nuclear-powered submarines (SSN-AUKUS) by 2030
- Establishment of an Office for AUKUS in Adelaide to support delivery of the SSN-AUKUS nuclear-powered submarines program
- Creation of the South Australian Defence Industry Workforce and Skills Task force, a joint initiative between the Australian Government and the Government of South Australia[3].
- Being home to one of only two Australian universities delivering the Defence Trailblazer Program, upskilling the workforce and accelerating leading-edge science and technology to boost Australia's sovereign defence capabilities
- Leading Australia's AUKUS nuclear education in partnership with The University of Manchester and the University of Rhode Island to help power the future workforce
- Developing purpose-built aircraft maintenance and modification facility adjacent to the RAAF Base Edinburgh
- Significant upgrade of the Woomera Test Range and surrounding infrastructure
- Establishing partnerships across the Advanced Strategic Capabilities Accelerator[4],connecting and streamlining defence innovation, science and technology systems to rapidly translate innovative technologies into capabilities that will take defence further, faster.

Located centrally in Australia, South Australia is the ideal gateway for your company to manage logistics via well established air, sea and rail freight channels.

AUKUS partnership

Under the AUKUS trilateral partnership, our nation will work to deliver the new conventionally armed, nuclear-powered SSN AUKUS submarines, with the first Australian-built vessel to be delivered in the early 2040s in South Australia.

An Office for AUKUS has been established by the Government of South Australia to coordinate the state's preparations and provide a key point of contact for Commonwealth agencies and high-level inter- governmental relations.

Over the next four years, South Australia expects A$2 billion in investment for this undertaking, with up to 4,000 workers at its peak employed in designing and building the infrastructure for the construction yard in Osborne. A further 4,000-5,500 direct jobs will be created in the state to build the submarines when the program reaches its peak in 20 to 30 years.

Works on the new submarine construction infrastructure at Osborne Naval Shipyard commenced in 2023.

Alongside our strengths in the defence sector, operating in South Australia connects you to world-leading innovation and leadership in key and growing industries including renewable energy, healthcare, manufacturing, critical and emerging technologies. Our state provides access to significant business advantages, including recognition as Australia's best performing jurisdiction for doing business due to its regulatory and taxation environment[5].

Guided Weapon and Explosive Ordnance opportunity

South Australia is ideally positioned for Guided Weapons and Explosive Ordnance related engagement with government and industry.

The Guided Weapons and Explosive Ordnance (GWEO) Enterprise has been established by the Australian Government to build capability in the domestic manufacturing of guided weapons and munitions, enhancing national security and industrial resilience.

Announced in 2021, the GWEO Enterprise is a cornerstone of Australia's modern defence capabilities and one of seven Sovereign Defence Industrial Priorities of Australia's Defence Industry Development Strategy, underpinned by critical enablers including research and development (R&D), manufacturing test and evaluation, storage and distribution, maintenance, disposal and demilitarisation and education and training.

South Australia boasts a long and proud defence and manufacturing history while actively embracing Industry 4.0 and its associated technologies, underpinned by multiple world-class research and innovation districts, parks and precincts. The state's globally recognised education ecosystem consistently delivering state-of-the-art training programs to meet future workforce demands.

South Australia has a comprehensive network of test and evaluation facilities across both government and private enterprise, suitable for long-range weapons testing, positioning the state as a prime location for GWEO related activities. One example is the Air Warfare Centre at RAAF Base Edinburgh, which supports the nation's electronic warfare capabilities through several directorates including Test and Evaluation, Air Force Ranges, Capability and Logistics and Mission Support.

In addition, the Long-Range Strike (HIMARS - High Mobility Artillery Rocket Systems) and integrated Air and Missile Defence capabilities (NASAMS- National Advanced Surface-to-Air Missile System) will be based at the 10th Brigade in Adelaide, which will further consolidate key future long-range strike capabilities in South Australia.

Woomera NASAMS live fire 2023

South Australia: The space capital

With over 100 space organisations across the state, South Australia has a dynamic space ecosystem that includes notable private investors, companies, startups, and research institutions that are developing space technologies and attracting global attention and investment.

The Australian Space Agency (ASA), the heart of the nation's space sector is located in South Australia. ASA's vision is to grow a globally respected space sector that lifts the Australian economy, inspires and improves the lives of Australians, and contributes to humanity's broader goals of exploration and a better Earth.

The SmartSat Cooperative Research Centre (CRC) is the biggest space industry-research collaboration in Australia's history, and headquartered in Adelaide. It is a national research powerhouse with more than 85 participants comprising universities, global space companies, Australian SMEs and more than 35 startups.

Funded by the Australian Government, it brings together universities and other research organisations, partnered with industry to develop know-how and technologies in advanced telecommunications and IoT connectivity, intelligent satellite systems and Earth observation next generation data services.

The South Australian Space Industry Centre (SASIC) leads the Venture Catalyst Space program which is Australia's first space dedicated accelerator and incubator program of its kind. The program, delivered through the University of South Australia's Innovation and Collaboration Centre, supports the founders of new startups within the space sector.

Kanyini Mission – an Australian first

In 2024, the South Australian Government partnered with SmartSat CRC and local companies Inovor Technologies and Myriota to send a locally manufactured small satellite to low Earth orbit.

Fully manufactured at Adelaide's Lot Fourteen innovation district, South Australia's first state-funded satellite - Kanyini - is a major milestone for South Australia's space sector. The mission has established space heritage for its South Australian partners, increased the capabilities of local space companies in the small satellite supply chain and created new investment opportunities for local space SMEs.

"The space sector in South Australia is thriving and is well-supported by the Government of South Australia and a range of other organisations."

Lloyd Lopez
CEO, Hex 20

With a strong foundation in advanced technologies and strategic geographic advantages for space flight, including returns, South Australia's space industry boasts a dynamic and comprehensive full-service ecosystem supported by leading research institutions and a thriving startup culture.

Upstream

South Australia has established itself as a leader in the upstream space sector, boasting advanced facilities and highly skilled professionals with significant expertise in satellite manufacturing, launch services, and sophisticated tracking and communication systems.

- **Advanced manufacturing, including spacecraft, sensors and components**
- **Spacecraft integration, testing and validation**
- **Launch services with full mission planning**
- **Payload development and integration**
- **Propulsion systems**
- **Space robotics and automation.**

Downstream

Through cutting-edge innovation districts and robust industry support, South Australia's downstream space sector leads globally through a collaborative ecosystem where shared expertise and resources deliver impactful solutions.

- **Satellite operations and ground services**
- **Mission control and space operations**
- **Space Domain Awareness (SDA)**
- **Remote communications**
- **Data Services and Internet of Things (IoT)**
- **Connectivity and data added-value services**
- **Quantum-enabled position, navigation and timing.**

Global advantage for launch and return

South Australia offers a globally unique opportunity: test, launch and return capabilities in the same state; environmental and operational advantages; and an ecosystem that supports industry innovation. The state's vast geography, coupled with robust infrastructure and regulatory readiness, enables safe, controlled and repeatable space operations from test to launch to recovery.

The state's unique geography and ongoing investment in infrastructure is meeting the growing international demand for easy, safe and reliable access commercial space ports. Key environmental and operational advantages include:

- minimal air traffic and electromagnetic interference: the testing and launching locations are outside significant flight paths reducing cost and risks during launch and re-entry
- year-round accessibility: moderate and predictable weather conditions allow for consistent scheduling and reduced delays, enhancing operational efficiency
- large and versatile operational areas: secure facilities that support a wide variety of mission profiles, including high-risk and experimental payloads.

From launch vehicle development testing to micro gravity experimentation and hypersonic flight, the Koonibba Test Range and Whalers Way Orbital Launch Complex can support test, evaluations, launch and return missions.

World's first commercial spaceport

South Australia's Koonibba Test Range is pioneering commercial space. The world's first commercial spaceport supports test, launch and re-entry operations.

Developed in partnership with Southern Launch and the Koonibba Community Aboriginal Corporation, this world-class space facility spans over 41,000 square kilometres of uninhabited land. It is one of the largest overland suborbital rocket testing facilities in the Southern Hemisphere.

In 2025, in a mission led by United States-based Varda Space Industries, Koonibba Test Range hosted the world's first-ever successful re-entry of a commercial spacecraft to a commercial spaceport.

This landmark achievement places South Australia at the forefront of the nation's launch and returns ecosystem.

Space manufacturing capability

The government has committed A$20 million to establish a space manufacturing facility within the Lot Fourteen innovation district in Adelaide. This facility will provide industry access to world-class equipment for small satellite and component manufacturing, assembly, integration and testing.

Committed government support

"From the very inception of the Inovor journey, the South Australian Government has been a pillar of strength, offering invaluable resources, financial assistance, and a conducive environment for innovation. Their commitment to fostering a thriving space industry in South Australia is truly commendable and has been instrumental in the growth and success of our business and our mission to push the boundaries of space technology.

The South Australian Government's efforts to create a collaborative ecosystem have been vital. By facilitating connections with other industry players, research institutions, and potential clients, they have helped us build robust networks that are essential for our business expansion and technological advancements."

Established test and evaluation capability

1. Woomera Range Complex

Size: 122,000 square kilometres

Operator: Royal Australian Air Force

Location: 500 kilometres north-west of Adelaide

Largest land-based range in the western world, capable of testing rockets and hypersonic technology.

The Woomera Range Complex's remoteness and quiet electromagnetic environment is ideal for complex air, ground and space test activities. The Complex comprises the Woomera Test Range, RAAF Base Woomera and the Nurrungar Test Range. The complex is used extensively by Australian and allied forces in joint exercises and training and includes the Advanced Test and Training Environment (ATTE) capability within RAAF's Air Warfare Centre (AWC).

2. Cultana Training Area

Size: 1,900 square kilometres

Operator: Australian Army

Location: 370 kilometres north-west of Adelaide

Australian Defence Force's (ADF's) largest training area capable of supporting joint and combined arms exercises.

One of only two areas in Australia able to support joint and combined arms training, with ideal terrain and climate for year-round armoured, mechanised and cavalry forces training.

3. Port Wakefield Proof and Experimental Establishment

Size: 56 square kilometres

Operator: Australian Army

Location: 83 kilometres north of Adelaide

Hosts weapons trials, munitions proofing and environmental testing for the Royal Australian Navy, Australian Army and Royal Australian Air Force.

Port Wakefield Proof and Experimental Establishment is the only range in Australia where projectiles can be fired into a coastal area and retrieved relatively undamaged for assessment.

4. Whalers Way Orbital Launch Complex

Size: 16 square kilometres (including ocean frontage)

Operator: Southern Launch

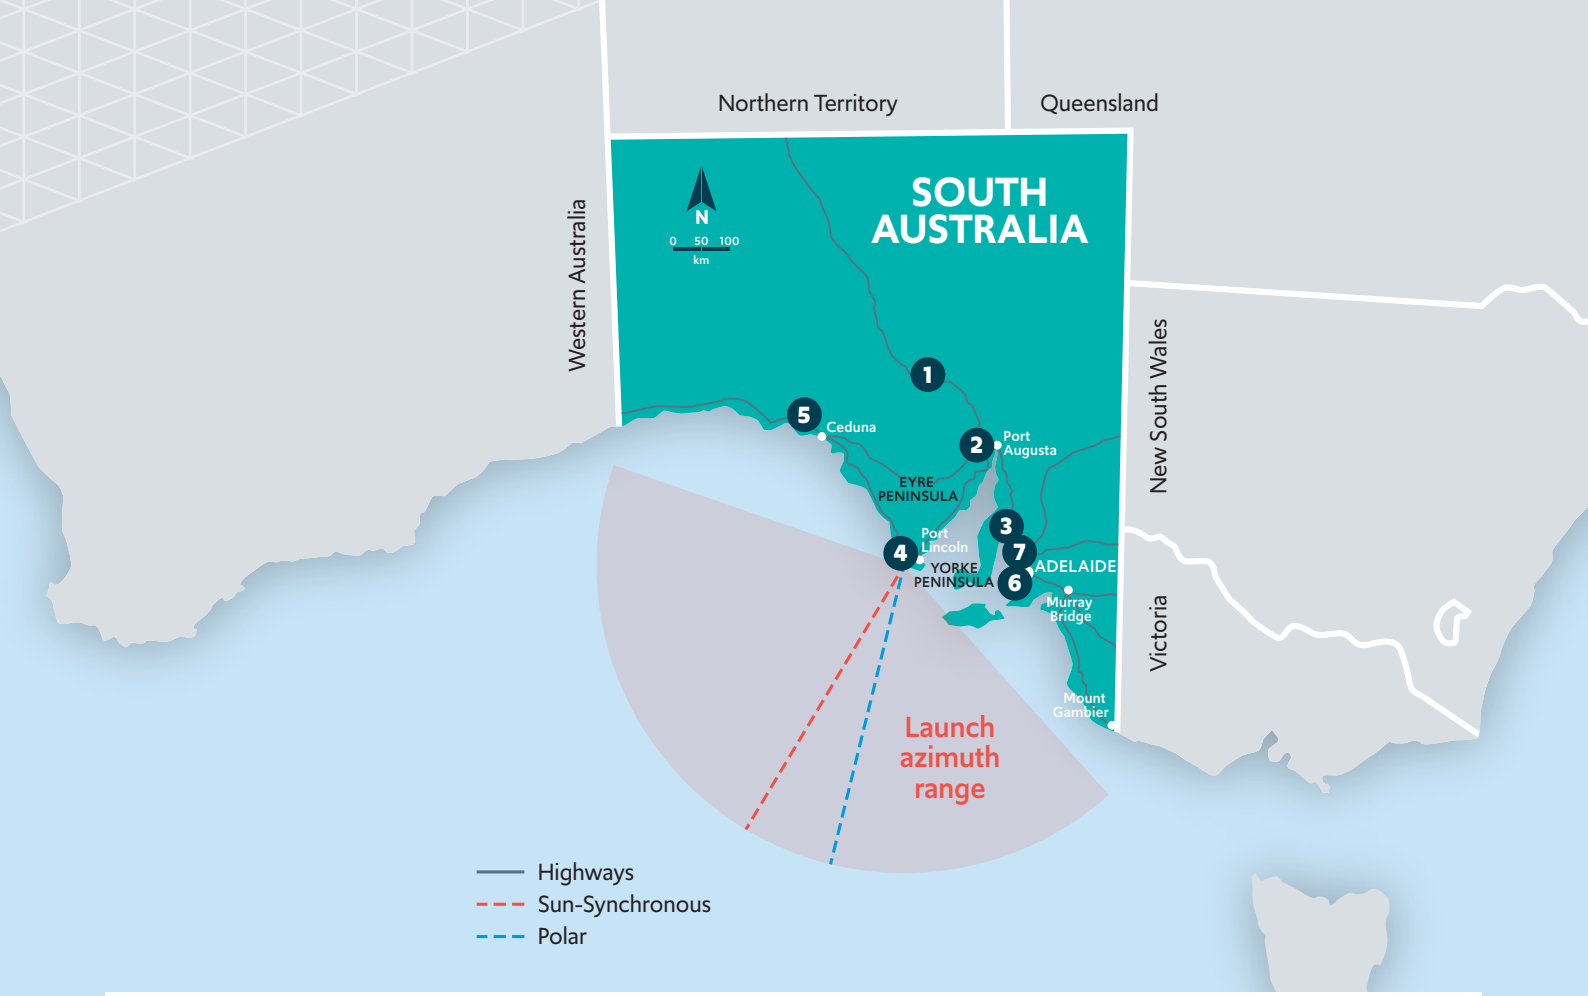

Location: South coast of Eyre Peninsula, close to Port Lincoln

The Whalers Way Orbital Launch Complex is one of the only sites in the world that can provide high-cadence launches to polar and sun-synchronous orbits. It is a fully instrumented range with telemetry, optical and radar systems.

The Whalers Way Orbital Launch Complex supports direct ascent trajectories from 55 to 177 degrees including polar, sun-synchronous orbits and 135 degree (equivalent to 45 degree) inclination.

The complex covers over 16 square kilometres (6 square miles) of open land with over 6 kilometres (3.72 miles) of ocean frontage and supports direct ascent to orbit flight trajectories over the Great Australian Bight, maximising spacecraft payload to orbit. The complex can also accommodate hypersonic flight testing and the return of space technology from orbit over water.

Favourable launch conditions at the Whalers Way Orbital Launch Complex offers greater launch window availability and launch schedule flexibility. Stable year-round weather and low maritime and air traffic provide unhindered access to space.

5. Koonibba Test Range

Size: up to 41,000 square kilometres (15,830 square miles) of range area, up to 350km (217 miles) downrange overland payload recovery

Operator: Southern Launch

Location: West coast of Eyre Peninsula

The Koonibba Test Range is one of the world's largest commercial ranges and Australia's largest civilian overland testing facility. It specialises in suborbital launches and returns from space. The range is equipped with a 16.8 metre launch rail capable of launching rockets up to 4,200kg. The facility can also receive the return of space technology from orbit inclinations from polar orbit to as low as 32 degrees. Support from the logistics hub of Ceduna.

The Koonibba Test Range is operated by Southern Launch in partnership with the Koonibba Community Aboriginal Corporation and is Australia's first licensed space launch facility. Koonibba exemplifies inclusive, future-focused infrastructure— where cutting-edge aerospace technology meets Indigenous stewardship and international collaboration.

6. University of Adelaide's Roseworthy Campus

Size: 1,600 square kilometres

Operator: Government of South Australia

Location: 50 kilometres north of Adelaide

Commercial testing services.

Provides comprehensive, high-quality commercial engineering testing services to government and industry. Can conduct engineering laboratory and field-testing services to nominated national standards, or design bespoke solutions specific to company needs.

7. RAAF Base Edinburgh

Operator: Royal Australian Air Force

Location: 34 kilometres north of Adelaide

Hosts weapons trials, munitions proofing and environmental testing for the Royal Australian Navy, Australian Army and Royal Australian Air Force. Port Wakefield Proof and Experimental Establishment is the only range in Australia where projectiles can be fired into a coastal area and retrieved relatively undamaged for assessment.

Driving workforce education

South Australian education providers have a strong track record of creating a highly skilled workforce through their world-class courses and training, driving the success of defence and space projects.

The Government of South Australia is committed to further enhancing the state's role as a leader in defence and space industries. This commitment is further cemented through the actions of the South Australian Defence Industry Workforce and Skills Taskforce, which plays a pivotal role in addressing workforce development and skills needs in these critical sectors.

Building upon the state's strong workforce across defence, advanced manufacturing, mining and other complementary industries, South Australia is poised to capture more investment opportunities in the shipbuilding, cyber, defence science and research and space industries.

Defence SA, SASIC and the Department of State Development work closely with academic partners and industry to meet the defence and space sector's workforce needs. At the same time, education pathways and student numbers across all levels of education are growing as a result of private and public initiatives, partnerships and investment, developing the skills needed for sustained growth of the defence and space sectors in South Australia.

South Australian Defence Industry Workforce and Skills Taskforce

Building a skilled workforce to enhance future capabilities

Established in 2022 as a joint initiative between the federal and state government, the South Australian Defence Industry Workforce and Skills Taskforce aims to ensure availability of a highly skilled workforce for future defence projects in the state.

Engaging directly with major defence contractors (known as 'primes'), small and medium enterprises (known as SMEs), defence industry associations and the education sector including universities, schools, TAFE and registered training organisations, key initiatives from the Taskforce's Workforce Action Plan include:

- supporting Science, Technology, Engineering and Mathematics (STEM) education pathways for up to 27,000 students across the state
- establishing an industry-ready pipeline of around 2,600 additional Vocational Education and Training (VET) and university students through flexible training programs, technical colleges and STEM focused higher education places
- establishing five new technical colleges
- strengthening STEM evaluations to better evaluate their impact
- supporting industry to sponsor security clearances to engage highly skilled workers from AUKUS partners in employing more apprentices, graduates and undergraduates through the Early Careers Program
- engaging and upskilling experienced workers and industry leaders through mid-career transition programs, the Skills and Training Academy and Defence Industry Leadership Program
- continuing close engagement with sector leaders and industry and union partners to sustain their collaborative and coordinated approach for continued defence sector skilling.

Flinders University

The University of Adelaide

Universities in South Australia have produced:

- 5 Nobel Laureates
- 12 knighthoods
- Over 100 Rhodes Scholars
- The first Australian to walk in space
- Australia's first female Prime Minister
- Nearly 5,000 graduates in engineering and science degrees over last five years[9]

Technical colleges

Underpinned by the South Australian Defence Industry Workforce and Skills Taskforce's *Workforce Action Plan*, the Government of South Australia is investing A$208.8 million to develop five technical colleges in metropolitan and regional South Australia[10].

Prioritising the defence sector, the first technical college at Findon opened in January 2024, with BAE Systems Australia as a key employer partner to support delivery of the Advanced manufacturing and engineering learning program. **Findon Technical College** will develop a pipeline of skilled workers for defence and naval shipbuilding, providing pathways to welders, fabricators, computer assisted designers, programmers and robotic technicians, among others.

Students who complete high school at Findon Technical College are guaranteed a job when they leave school with one of the employer partners. Students are also offered the unique opportunity to fast-track to university and work part-time in the industry while they complete their tertiary education.

Tonsley Technical College will be located within Tonsley Innovation District and with ASC announced as its key industry partner. The College is being built in tandem with Flinders University Factory of the Future, developing vibrant industry linked research, education and training facilities. The remaining colleges will also work closely with industry partners to align with workforce needs and capabilities, including a focus on advanced manufacturing.

Skills and Training Academy

A dedicated Skills and Training Academy will be established at Osborne, supporting pathways into and within the submarine and naval shipbuilding workforce including developing skills required for construction of the SSN-AUKUS submarines. Up to 500 international placements will be available to grow the necessary nuclear program experience for Australia's nuclear-powered submarine program[11].

Co-designed by the Australian and state governments, and developed in consultation with industry and unions, the Academy will provide trade training facilities, welding bays, workshops and machining centres for hands-on training to prepare graduates with workforce-ready skills.

Australian Defence Technologies Academy

Lot Fourteen will be home to the new Australian Defence Technologies Academy from 2026. This state-of-the-art facility will provide digital training, education and research capabilities critical to the defence industry, while aligning with other sectors including space and cyber.

Operated by the new Adelaide University, the joint A$60 million investment by the state and Australian governments, the Academy will drive sovereign research and development of defence capabilities in South Australia, building on Adelaide's position as a global leader in defence innovation and research.

Defence Industry Connection Program

Now open for registrations, the Defence Industry Connection Program is a A$3.9 million investment by the Government of South Australia over four years, providing eligible students with a scholarship to undertake work placements with a local defence company.

As one of the 22 initiatives outlined in the *South Australian Defence Industry Workforce and Skills Report* (2023), the program will enable up to 300 university students to gain vital work experience in the defence industry. Through hands on learning and financial support in the form of scholarships, the program aims to reduce barriers often associated with undertaking work placements.

[9] *Relevant engineering degrees include chemical, mechanical, aerospace, defence, electrical, mechatronics, general engineering degrees, robotics (where combined with mechanical), minerals and resources. Relevant science degrees include chemical science and physics)*

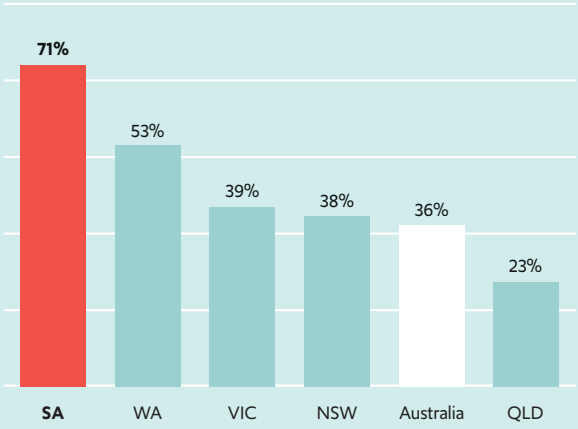

[10] *Findon Technical College building underway (March 2023), media release, Premier of South Australia*

[11] *South Australian Defence Industry: Workforce and Skills Report, Government of South Australia*

Committed to supporting end–to–end industry development

The Government of South Australia, working in collaboration with the Australian Government, is driving and supporting state and federal initiatives that bolster local supply chains, and drive substantial investment in skills development and job creation to guarantee the success of future projects.

Growth in defence industry direct employment headcount (%), 2019-20 to 2023-24

Source: ABS Australian Defence Industry Account

Since 2019–20, South Australia has had the highest defence industry employment growth rate across Australia, 34 percentage points above the national average.

With the state's success in securing federal and international projects, the South Australian defence industry workforce is projected to experience an increase of over 140 per cent in next two decades - a major increase on the 42 per cent growth rate since 2019-20. This future growth will see direct employment in the sector rise from approximately 3,500 jobs today to over 8,500 by the 2040s[12].

Industry Capability Network

Securing the future's workforce by building the right procurement partnerships

The Industry Capability Network (ICN) is a network of experienced industry procurement and supply chain specialists who connect Australian and New Zealand businesses to projects large and small.

Over the last 40 years, ICN has been helping find the suppliers and service providers who are best equipped to meet the requirements of thousands of projects across Australia and New Zealand.

The ICN team within South Australia's Department of State Development provides a pivotal connection between major projects and South Australia's best suppliers.

It fosters opportunities for local businesses to capitalise on the billions of dollars in major projects underway and in the pipeline in South Australia. With powerful tools like Gateway by ICN, a database containing more than 90,000 supplier records, ICN has contributed to contracts valued at more than A$2 billion being awarded to South Australian companies and the creation of more than 28,000 jobs[13].

"Through ICN we have been able to connect the local supply chain to international opportunities linked to building Hunter class frigates for the Royal Australian Navy. This growing supply chain collectively contributes to building sovereign shipbuilding capability."

Sharon Wilson
Director, Continuous Naval Shipbuilding

[13] *South Australia's innovative manufacturing sector, Department of State Development, Government of South Australia*

South Australian universities

Our current three public universities: the University of Adelaide, the University of South Australia (UniSA) and Flinders University, along with VET providers, including TAFE SA, all offer courses that build job-specific skills across a wide range of industries, including defence and space.

South Australia's performance is equivalent to the top three performing OECD countries for citation impact in the following STEM research fields:

- engineering
- numeric and computational mathematics
- manufacturing engineering
- statistics
- nanotechnology
- chemical sciences.[14]

Global Executive Master of Business Administration GEMBA (Defence and Space)

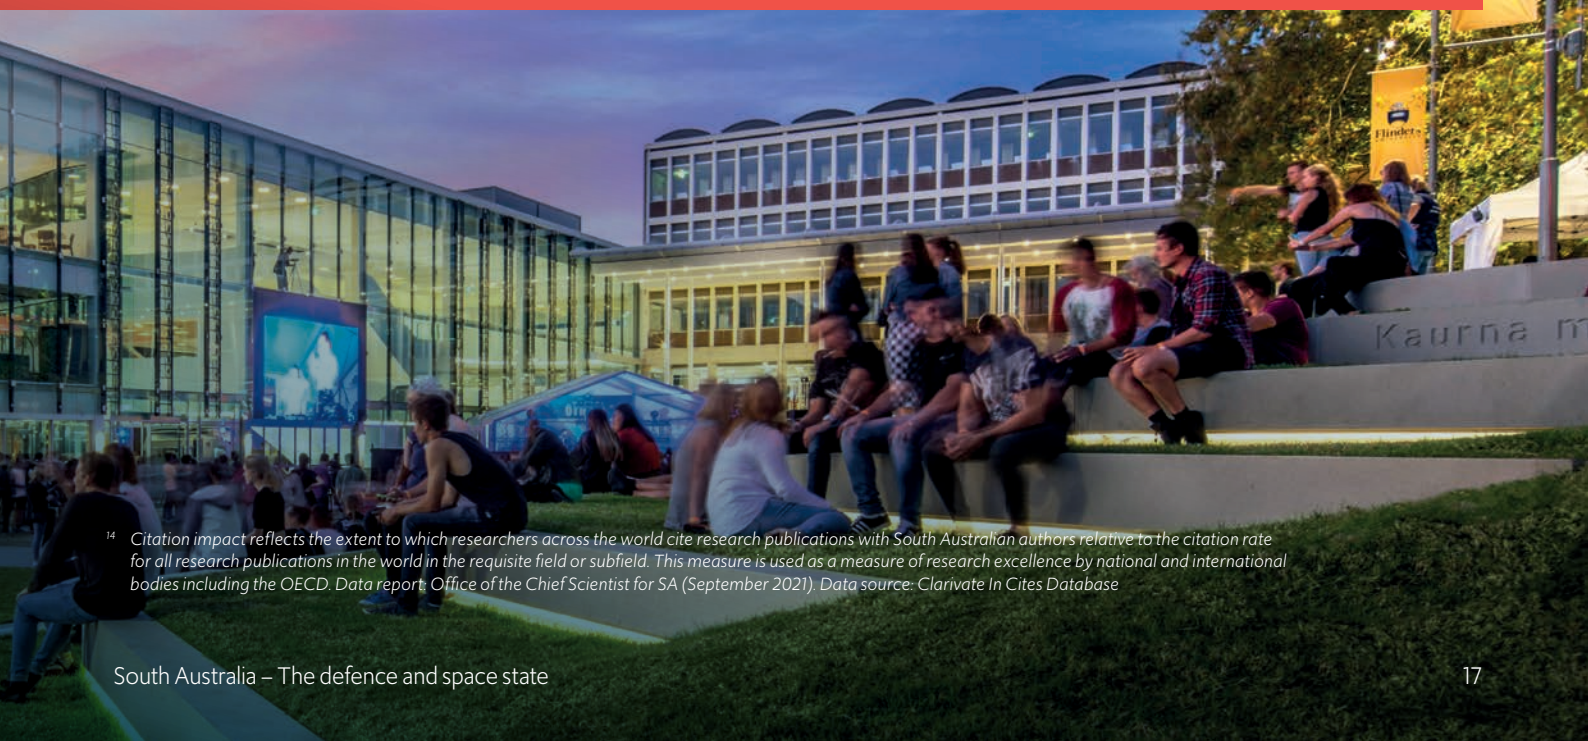

The Global Executive Master of Business Administration GEMBA (Defence and Space) is a world-class, industry-focused program, designed to meet the workforce development needs of these sectors. GEMBA is a unique collaboration with international industry experts and is delivered across the United States, the United Kingdom and Australia. The program targets the development and extension of knowledge and understanding in relevant fields including space systems, defence procurement, global security and digital disruption.

Adelaide is positioned to be the largest domestic educator and provider of defence and space research in Australia through an impending merger of two of the state's universities. From 2026, the University of Adelaide and the University of South Australia will be combined to create a new university called Adelaide University. Commencing operation in January 2026 and building on the legacy and strengths from both universities, the new Adelaide University will cater for over 70,000 enrolments.

South Australia is acting now

Addressing South Australia's growth in high-skilled jobs vacancies, the *South Australian Defence Industry Workforce and Skills Action Plan* provides a detailed blueprint to create, train, and retain a highly skilled and experienced defence industry workforce into the 2040s.

- **More than 80% of the initiatives in the Action Plan delivered within one year of its release**
- **A$300 million in investment between state and federal governments including the five technical colleges and university places.**

[14] *Citation impact reflects the extent to which researchers across the world cite research publications with South Australian authors relative to the citation rate for all research publications in the world in the requisite field or subfield. This measure is used as a measure of research excellence by national and international bodies including the OECD. Data report: Office of the Chief Scientist for SA (September 2021). Our research and cyber advantage

South Australia is home to world-leading research and cyber innovation and the Government of South Australia is committed to further building the state's capabilities in pioneering research, robust cyber security and innovation leadership across all economic sectors.

Underpinned by South Australia's advanced technology infrastructure, including *SABRENet* and the *Ten Gigabit Adelaide* networks' revolutionary speed and performance, our state is home to key national innovation, research and cyber institutions. Several of these nation leading capabilities located in South Australia are:

Defence Science and Technology Group

The Defence Science and Technology Group (DSTG) is the Australian Government's lead agency responsible for applying science and technology to safeguard Australia and its national interests.

As Australia's second largest national science agency, DSTG employs approximately 2,200 staff[15]- predominantly scientists, engineers, IT specialists and technicians - with half of them based at Edinburgh in South Australia.

In 2024, a partnership involving DSTG, UniSA, South Australian company Fleet Space Technologies and SmartSat CRC achieved a giant step in the development of sovereign Australian technology. The team conducted a demonstration consisting of receiving and retransmitting voice communications relayed from a nano-satellite in low-Earth-orbit to a remote user terminal in South Australia, which relayed the signal back. This represented an all-Australian achievement and is probably a world-first.[16]

Defence Innovation Partnership

The Defence Innovation Partnership is a collaborative venture between DSTG, Defence SA, South Australia's three public universities and other research organisations and industry. These stakeholders act as a catalyst for defence-relevant R&D collaboration, improving the relationship between industry and academia while building research capability in South Australia.

Higher education research

Enabled by South Australia's long history and leading role in the defence and space industries, our state's three public universities are at the forefront of research in defence, cyber, and space sectors.

Leveraged by world-class expertise and a cooperative academic community, the University of Adelaide, UniSA and Flinders University's capabilities address current and future industry needs by providing advisory services, developing research partnerships, and participating in specialty programs such as the Defence Trailblazer.

This multifaceted approach fosters a dynamic ecosystem that brings together industry, government agencies and cutting-edge researchers, and ensures that South Australia remains a hub for innovation and excellence in defence, space and cyber technologies.

Australian Institute for Machine Learning

The Australian Institute for Machine Learning (AIML) conducts globally competitive research and development in AI, machine learning, computer vision and deep learning, across industries including defence and space, healthcare and agriculture.

With almost 200 members spanning across academics, researchers, students, engineers and professional staff, AIML partners with industries to provide technologically advanced products and solutions for even the most challenging problems.

SmartSat Cooperative Research Centre

The SmartSat Cooperative Research Centre (CRC) is the largest space industry research collaboration in Australia. The consortium includes universities, global space companies, Australian startups and SMEs, working with industry to enhance Australia's space capabilities.

Headquartered in Adelaide and funded by the Australian Government's CRC Program, SmartSat CRC supports the development of technologies and know-how in advanced telecommunications, AI, intelligent satellite systems and earth observation data services.

The organisation brings together academic researchers, industry and end users to develop, manage and deliver useful technologies, algorithms and knowledge that supports every sector of the economy. The research and innovation developed creates the expertise to grow the Australian space industry, delivers economic prosperity and generates new high-tech jobs for future space leaders.

DTEX Systems at The Cyber Range, Lot Fourteen, Adelaide.

Australian Cyber Collaboration Centre

The Australian Cyber Collaboration Centre (Aus3C), backed by the Government of South Australia, is a central connection point for businesses looking to improve their cyber resilience by connecting leaders, thinkers and doers of today and tomorrow with real opportunities to learn, activate businesses, adapt to change and solve challenges within the digital domain. Aus3C fosters an ecosystem in which industry, researchers and government can collaborate and enhance the nation's reputation as a cyber security leader, with a focus on:

- developing the future cyber workforce
- providing hardware and software testing capability
- building cyber security awareness and capability with a focus on Boards, C-suite executives, SMEs and government.

Aus3C features a cyber training academy and test range facility, physical spaces for collaboration, infrastructure to support product testing and training and access to, and delivery of, best of breed training courses.

DSTG – Space, Intelligence, National Security and Cyber Division

DSTG's Space, Intelligence, National Security and Cyber Division, with the majority of its workforce based in Adelaide, leads the delivery of innovation, science and technology programs for defence intelligence, joint capabilities and joint operations.

The division contributes to the delivery of the *Innovation, Science, and Technology Delivery Program*, which encompasses AUKUS Pillar II collaborative efforts, as well as the Information Warfare and Agile Command & Control Resilient Multi-Mission Space Star Shots.

The division focuses on the following areas:

- security resilience
- artificial intelligence
- quantum
- intelligence
- cyber
- joint electronic warfare
- space systems.

The Royal Australian Air Force – cyber capability

The Royal Australian Air Force's (RAAF) leading cyber warfare capability is primarily based at RAAF Base Edinburgh in South Australia.

This team of experts are specifically selected, trained and prepared to protect the RAAF's networks, data and information systems. They also assist customers seeking expert advice and accreditation of the RAAF's standalone mission systems and networks, in addition to providing an incident response capability.

The group provides critical support to exercises and operations around the world and has received widespread recognition for its effectiveness and cutting-edge approach as the RAAF's premier cyber capability.

DTEX Systems and MITRE Corporation, united in Aus3C: homegrown leadership in cybersecurity and insider risk management

Award-winning cyber security company, DTEX Systems, and United States Government trusted research partner, MITRE Corporation, have been partners since 2022.

DTEX, founded in South Australia, and MITRE are creating a world-leading capability in proactive cybersecurity across Five Eyes nations by integrating behavioral science into insider threat detection. Their partnership fosters a public-private collaboration, leveraging DTEX's purpose-built InTERCEPT platform in MITRE's Inside-R Protect program to uncover data-driven insights for detecting and mitigating insider threats before they become data breaches.

Both members of Aus3C, based at Adelaide's Lot Fourteen, key clients for DTEX and MITRE operate in highly regulated environments, including Australian and United States government agencies, critical infrastructure, energy, pharmaceuticals, banking and finance.

Alongside South Australia's dedicated defence and space precincts at Edinburgh and Osborne, our state is home to key innovation precincts and world-leading organisations that offer capabilities able to underpin and advance industries.

Technology Park Adelaide

Innovation and Collaboration Centre at Lot Fourteen

Lot Fourteen

Lot Fourteen is Adelaide's leading district for accelerating innovation, entrepreneurship, research and education.

Home to global leaders in machine learning, data and cyber, including the AIML and the Australian Cyber Collaboration Centre, Lot Fourteen is a driving force in the South Australian economy, a gateway for transformative knowledge and a beacon of opportunity, allowing defence agencies and organisations to partner with innovation leaders.

The **Defence and Space Landing Pad** provides approved relocating companies with affordable, short-term office facilities and relationship building opportunities, with assistance relevant to their relocation and business development plans.

The precinct is part of the Global Institute of Innovation Districts (GIID) – a global network of innovation districts, collaborating to maximise potential by leveraging unique R&D strengths, and providing organised responses to global issues.

Set for completion in 2027, Lot Fourteen's new Innovation Centre will drive the growth of defence, space, critical technologies, and cyber industries. It will house the A$60 million Australian Defence Technologies Academy, a A$20 million Innovation Hub, and a A$20 million space assembly integration and testing facility.

Technology Park Adelaide

Technology Park Adelaide is a vibrant business community of innovative, emerging and established organisations with a critical mass of technology expertise.

An established hub of over 100 hi-tech organisations in the defence and aerospace, engineering, advanced electronics and ICT sectors, Technology Park Adelaide provides a thriving environment for continual collaboration and networking.

Adjacent to the world-class Mawson Lakes residential development, Technology Park Adelaide is an ideal place to work and do business.

Key precinct partners include:

- Airspeed
- Australian National Fabrication Facility South Australia
- CEA Technologies
- Kongsberg Defence Australia
- Lockheed Martin
- L3 Harris
- Northrop Grumman
- Raytheon Australia
- Saab Australia
- Solinnov
- University of South Australia.

BAE Systems Australia establishes its national headquarters at Lot Fourteen.

In September 2024, major defence prime BAE Systems Australia (BAE) announced its decision to sign on as a cornerstone tenant in Lot Fourteen's Innovation Centre.

Establishing its Australian headquarters with approximately 500 employees, will further position BAE at the centre of South Australia's defence and critical technologies innovation. This is a key contributor to South Australia's *Innovation Places Leadership Network*, accelerating the state's innovation capability and supporting economic investment and growth in the state.

Flinders Factory of the Future

Tonsley Innovation District

Tonsley Innovation District brings together leading-edge institutions and companies to connect with startups, business incubators and accelerators in high-value industry, research and education.

Tonsley is a multi-award-winning 61-hectares district south of Adelaide's city centre, based around a triple-helix partnership between government, university and industry while adhering to the guidelines of the Innovation District Model. This model incorporates the integration of physical assets, economic assets and networking assets in order to create a thriving and sustainable innovation ecosystem that has grown to around 2,000 workers and approximately 8,500 students.

Under the umbrella of high-value manufacturing, Tonsley targets four focus sectors that reflect South Australia's economic strengths and opportunities: software and simulation; cleantech and renewable energy; health, medical devices and assistive technologies; mining and energy services as well as automation.

Innovation is in Tonsley's DNA. Tonsley offers a collaborative testbed for developing and trialing new innovations and technologies in a real-world setting. The complex and multi-faceted nature of Tonsley provides great opportunities for businesses, researchers and students to translate and apply new thinking in many of the world's key challenges such as energy, mobility or connectivity.

Tonsley is home to the Flinders Factory of the Future, a world-class reconfigurable advanced manufacturing testbed, training and industry growth facility, and the future site of the Tonsley Technical College. A joint initiative of Flinders University and BAE Systems Australia, the facility is a first of its kind in Australia.

Education campuses onsite

The Tonsley-based campuses of Flinders University and TAFE SA are building our state's next generation of skilled capabilities in STEM fields, artificial intelligence, defence and national security, autonomous vehicles, and building and construction services.

Key district partners at Tonsley include:

- SAGE Group
- BAE Systems Australia
- Tesla
- SIEMENS Energy.

> *"There's nothing like it [Tonsley] in Australia and I believe it represents as one of the best innovation hubs in the world."*
>
> **Andrew Downs, Founder and Executive Director, SAGE Group**

Innovation places

Our sectors co-exist in hi-tech hubs and research centres, forging collaborative ecosystems that open doors and inspire new ways of thinking.

Edinburgh Defence Precinct
34 kilometres from central business district

Key national defence research, manufacturing and sustainment hub housing the RAAF Base Edinburgh, Defence Science and Technology Group and major defence companies.

Osborne Naval Precinct
26 kilometres from central business district

Australia's largest naval shipbuilding hub incorporating a critical mass of world-class warship design and construction skills.

Significant upgrades are slated to make it one of the most technologically advanced naval shipyard in the world.

Technology Park Adelaide
17 kilometres from central business district

Hub for systems development and integration, information communications technology, advanced manufacturing and electronics, and home to over 100 SMEs, multinationals and startups.

Lot Fourteen
Adelaide central business district

Australia's first ideas and innovation neighbourhood and home to the Australian Space Agency, SmartSat CRC, Defence and Space Landing Pad, Stone & Chalk Startup Hub Adelaide, the Australian Mission Control Centre, Australian Institute of Machine Learning and the Australian Cyber Collaboration Centre.

Tonsley Innovation District
12 kilometres from central business district

Home to high value manufacturing industries including defence, health, medical devices and assistive technologies, cleantech and renewable energy, software and simulation, mining and energy services.

Location of Flinders University Factory of the Future.

Australia's most cost competitive city

South Australia's competitive business environment supports commercial success, a suitably skilled workforce with competitive labour costs and high staff retention rates.

With one of the lowest central business district office rental costs, establishing in Adelaide will support companies to operate and more rapidly scale their operations.

Most affordable CBD office rent (AUD/sqm p.a.)

Most affordable industrial rental space (AUD/sqm p.a.)

Adelaide offers an unrivalled cost advantage

Invest SA has prepared a generic cost model to demonstrate the cost savings over 10 years for 20 full time staff based in Adelaide compared to other major Australian capital cities. The model takes into account warehouse leasing costs, salary costs and payroll tax.

$17.6m
cost saving when compared to Sydney

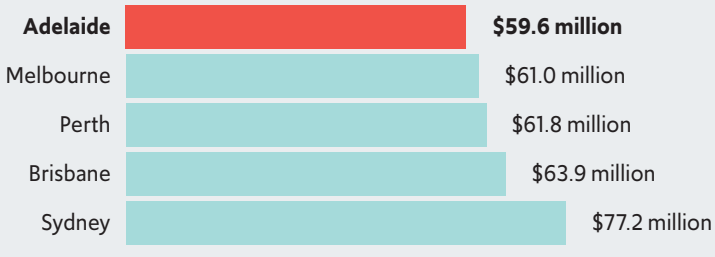

$4.3m
cost saving when compared to Brisbane

$2.2m
cost saving when compared to Perth

$1.4m
cost saving when compared to Melbourne

Cumulative operational costs over 10 years

Total operational costs over the next ten financial years

Assumptions

- *All costs are in current Australian Dollars (AUD).*
- *All payroll tax payments assume wages for Australian business operations only and do not consider pre-existing business operations.*
- *All property transfer duty and land tax calculations are estimates only. Companies may face different rates, exemptions, or additional charges depending on existing company operations, alternate land uses, leasing agreements etc.*
- *Staff salaries sourced from the Hays Salary Guide exclude superannuation and so is added on top of these estimates.*
- *Wages and salaries are assumed to increase by the state-respective Wage Price Index (WPI) each year.*
- *Land prices, site leasing costs, and construction costs are assumed to increase by the state-respective Producer Price Index (PPI) each year.*
- *Queensland's Regional Property Payroll Tax Concession ends on 30 June 2030.*
- *Victoria's Regional Property Tax Concession assumes at least 85 per cent of the business' operations occur outside of Greater Melbourne.*
- *Victoria's Temporary Payroll Tax Surcharge ends on 30 June 2033.*
- *The Federal Creative Industries Offset/Rebate is assumed to cap at $20 million.*

Advantage Adelaide – live, work & play

From the city to the sea, South Australia offers the ultimate living experience with something for everyone.

Our state is a prime living destination for young professionals and families alike, boasting a perfect combination of cultural experiences, picturesque landscapes, and a lively yet peaceful city centre, in a Mediterranean climate with warm, dry summers and mild winters.

Adelaide is a progressive, cosmopolitan capital offering a premium lifestyle with world-renowned festivals, major sporting events and iconic locations, such as the Barossa Valley, Kangaroo Island and Flinders Ranges.

South Australia's innovative, cost competitive and agile nature is luring more young talent, and the ability to rapidly scale and provide skilled workers in critical sectors has caught the attention of world-class companies.

With a thriving economy, recognition as one of Australia's safest cities, and consistent ranking as one of the world's most liveable cities by The Economist Intelligence Unit's Global Liveability Index, Adelaide offers a great lifestyle for individuals and families at an affordable cost.

Whether you choose city, suburban or country life, you are guaranteed a lifestyle that supports work-life balance, a supportive and family-friendly community and high- quality options for primary, high school and university students.

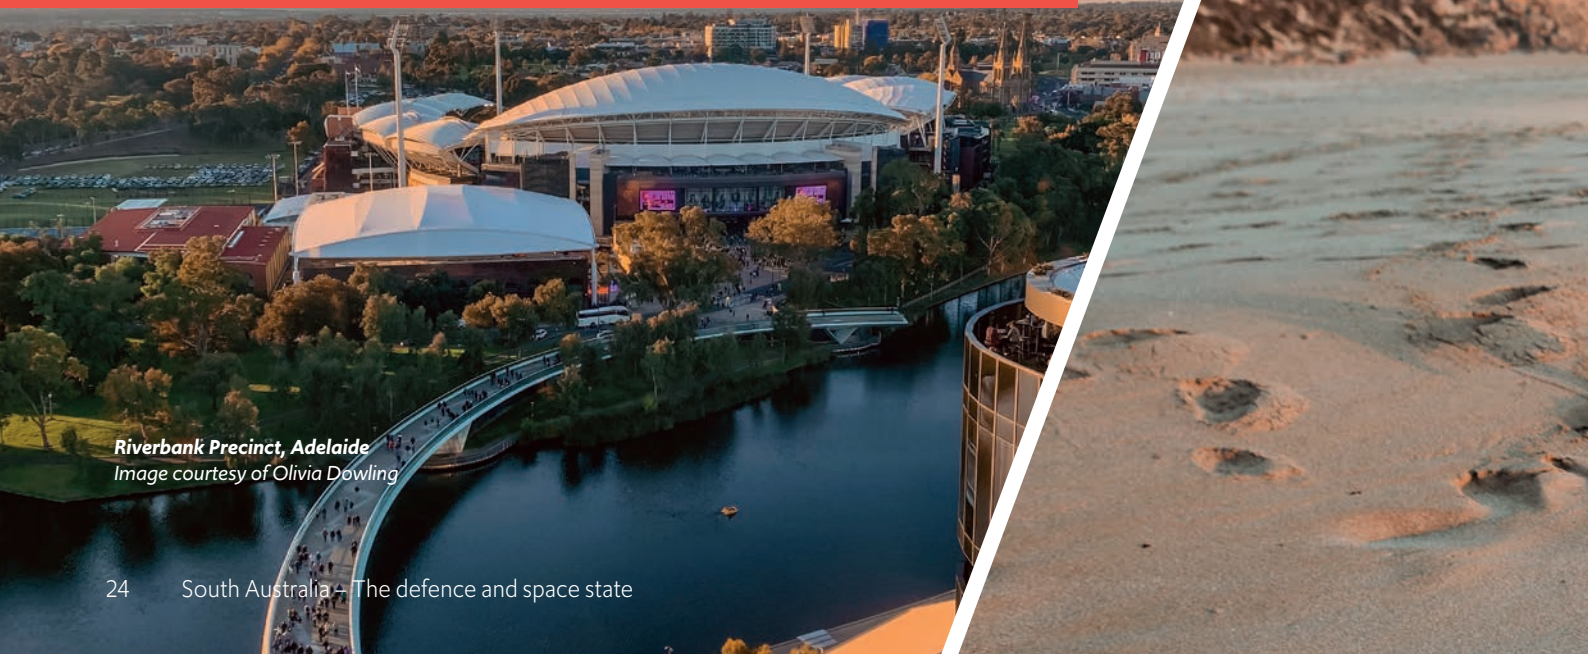

The high-quality education credentials of the state's private and public schools are showcased in the latest release of the Better Education analysis of 2024 academic outcomes. South Australia achieved top results, with every secondary school in the top 50 achieving at least 91 out of 100 points and three high schools attaining a maximum score.

South Australia's established role as Australia's Defence State has attracted large numbers of national and international employees, building a diverse defence community with social and professional networks that support workers and their families throughout their relocation journey.

- **Australia's best location for doing business. South Australia's land planning system recognised as the nation's best, based on efficiency, consistency, certainty and transparency** [17]
- **One of the lowest cost of living capital cities in Australia** [18]
- **Adelaide's median house price is 40% lower than Sydney** [19]
