SOUTH AUSTRALIA

Government of South Australia

Invest SA is a dedicated team of investment and business professionals within the Department of State Development, the only agency that can connect you with opportunities, industry networks, and other government agencies in the health and medical sector in South Australia.

Invest SA's Health and Medical Industries team is available to support your project facilitation, case management and business case development for growth in South Australia.

Let's talk 40

Uniquely connected health innovation ecosystem

South Australia is characterised by deep clinical research, manufacturing and an end-to-end value chain supported by world-class infrastructure and digital capabilities. It is an exceptionally collaborative and connected ecosystem for drug development, advanced manufacturing and data-driven health innovation. **This makes Adelaide and South Australia the perfect location to collaborate, innovate, and trial new products, ready for global commercialisation.**

End–to–end clinical trial capabilities

Australia's streamlined regulatory framework enables fast timelines for clinical trial conduct delivering data recognised by key global regulators such as the TGA, FMA, EMA, MHRA, MFDS and PDMA. Clinical trials can commence in as little as six weeks.

South Australia offers a unique and efficient ecosystem for clinical trials, serving as an ideal entry point into the Australian clinical research sector. Clinical trials in South Australia are cost-effective, highlighted by the Australian Research and Development Tax Incentive Program of up to 43.5 per cent.

Data–driven precision health innovation

Adelaide is home to world-leading artificial intelligence, data analytics and virtual reality capabilities, supported by unique clinical infrastructure, longitudinal datasets and biospecimen for precision health innovation.

Australia's first facility solely dedicated to artificial intelligence research, the Australian Institute for Machine Learning (AIML), conducts globally renowned research in machine learning, artificial intelligence, computer vision and deep learning and collaborates with industry across sectors to develop high-tech products and solutions. AIML works with leading global companies including Roche, GSK and Medtronic to push the frontier of precision health.

Manufacturing capability

Australia's commercial drug manufacturing pedigree was forged in South Australia. The nation's leading academic manufacturing resources and established commercial operations are based here.

South Australia's contract development and manufacturing organisations (CDMOs) support process development through to clinical and commercial scale manufacturing for global markets to Good Manufacturing Practice (GMP) for small molecules and biologics. South Australia offers radiopharmaceutical manufacturing, including access to radio isotopes.

Expertise spans across therapeutics (biologics and small molecules), vaccines, medical devices, nutraceuticals, traditional medicines, and radiopharmaceuticals to GMP requirements.

Drug development and biotech

South Australia is a centre for drug research across a wide range of indications including immunology, infectious diseases, neuroscience and endocrinology.

Oncology is a focus, including precision health, CAR T-cell technology, computational systems, epigenetics, single cell and spatial technologies, gene regulation, molecular signaling, translational oncology and cancer genomics.

Connected innovation precincts

Adelaide's flagship innovation places include Adelaide BioMed City, an AUD$3.8 billion investment, Lot Fourteen, focused on critical technologies, and Tonsley Innovation District, centred around advanced manufacturing. These places boast state-of-the-art infrastructure combined with world-class researchers, industry, government and academia, spurring a high degree of integration and collaboration.

With Adelaide BioMed City, Lot Fourteen and the universities within walking distance of each other in the central business district, South Australia has a unique clustered environment where health and medical research, manufacturing and clinical care are embedded with technological innovation.

This makes Adelaide and South Australia the perfect location to collaborate, innovate, and trial new products, ready for global commercialisation.

Complete clinical trial ecosystem

Clinical trials data accepted by global regulatory agencies

Australia's best longitudinal clinical data set

Statewide electronic medical record linked to Australia's largest pathology and medical imaging providers

World-class hi-tech capabilities

Artificial intelligence, augmented and virtual reality(AR/VR), quantum, data analytics and computer vision leadership

World-class health and medical ecosystem

One of the world's most connected and technologically advanced precincts

State-of-the-art GMP manufacturing

R&D to commercial scale, small and large molecules and radiopharmaceuticals

Leader in cancer research, clinical translation and care

Including key opinion leaders, research institutions and isotope synchrotron for clinical research and care

43.5% R&D Tax Incentive Program

Supporting companies across R&D activities in Australia

Advanced device manufacturing capabilities

Expertise and capability for ISO 13485

Leading biotech R&D

Concentration of world-class biotech including vaccine, microbiome and CAR-T cell research

Leading global innovation

South Australia:

- Gained the world's first microbiome therapy approval[1]
- Was the first to revolutionise x-ray technology[2]

More than 150 health companies within a 20-minute radius

Over 4,000 researchers and concentrations of deep health expertise

[1] *CosmosID 2022, Australia to Become the First Country to Approve Fecal Transplant to Restore Gut Health*
[2] *Australian National Fabrication Facility-South Australia 2020, Mobilising life-saving portable x-ray systems across the globe*

End–to–end clinical trial capabilities

South Australia provides the fastest pathway for clinical trial conduct with data accepted by regulatory agencies globally, offering speed, quality and value in medical research.

South Australian Advantage

Australia's most experienced providers operate in South Australia, creating the nation's most comprehensive, connected and supportive clinical trial ecosystem, providing leadership across the entire supply chain:

- Local ethics approval and an advanced ecosystem allows you to start trials in five to six weeks.
- Save by collaborating with experienced partners, providing specialist advice for you to be efficient, de-risk and add value to your trial exploration, setup and conduct.

Our globally unique ecosystem provides a trusted and connected environment for you to partner and innovate, maximising value for your organisation.

Start in South Australia to leverage the Australian Advantage

SPEED

- Efficient regulatory framework saves up to one year in regulatory timelines
- Investigational new drug application (IND) not required for Phase I studies

QUALITY

- Globally accepted data with the highest quality standards for submission to regulatory agencies including the US FDA, UK MHRA, EU EMA, and Japan PDMA

VALUE

- 43.5% R&D tax incentive program

Complete clinical trial ecosystem

Medtech capabilities

Pioneering medtech innovation and commercialisation

Adelaide's medtech ecosystem brings together quality manufacturing and strengths in product innovation and R&D, clinical trial expertise and hi-tech capabilities.

Three strategic precincts connect research, development, commercialisation and manufacturing with the expertise, programs and capabilities of our state's universities, hospitals and industry.

Medtech in South Australia benefits from access to critical technology capabilities such as AI, opening up data-driven and precision opportunities from product development through to manufacturing.

The state's clinical trial capabilities are Australia's most comprehensive. Service providers work together to support device companies on their clinical trial journey.

Device manufacturing depth

South Australia's manufacturing draws from advanced manufacturing sectors such as medical, aerospace, electronics and defence. This diverse industrial base encompasses small-scale to mass production, ISO 13485-compliant contract and precision manufacturing resources. This accelerates medical devices towards trial, regulatory approvals and scale-up to commercial production.

Programs and features

Medical Device Research Institute (MDRI)
A multi-disciplinary collaboration integrating engineering, medicine, allied health and information technologies.

Medical Device Partnering Program (MDPP)
Flagship initiative supporting medtech companies to develop minimum viable products.

Aged Care Partnering Program (ADPP)
Focused on medical devices for the aged care sector.

Aged Care Research and Industry Innovation Australia (ARIIA)
Industry-led organisation working collaboratively to facilitate positive transformation of aged care.

Australian National Fabrication Facility (ANFF)
Supports companies to develop advanced manufacturing processes for medical devices.

Strengths include lab-on-a-chip, micro/nanofluidics, advanced sensing, functional coatings and separation science.

Colab.Tech
Brings together medical, engineering, business and science professionals around medical device projects and small-scale ISO 13485 manufacturing, including for clinical trials.

Pharmaceutical manufacturing

Manufacturing capability

Australia's commercial drug manufacturing pedigree was forged in South Australia. The state is home to the nation's leading academic manufacturing resources and established commercial operations.

South Australia's contract development and manufacturing organisations (CDMOs) support process development through to clinical and commercial scale for global markets to Good Manufacturing Practice (GMP), for small molecules and biologics.

Expertise areas span across therapeutics (biologics and small molecules), vaccines, medical devices, nutraceuticals, traditional medicines, and radiopharmaceuticals to GMP requirements.

BioCina is a global biologics CDMO operating from Adelaide. BioCina provides scientific and operational excellence from process development through the cGMP clinical and commercial scale manufacturing of microbial, pDNA and mRNA therapeutics and vaccines.

BioCina presents an elite regulatory track record, including approvals from the United States' FDA, the European Union's EMA, Australia's TGA, and Health Canada.

BioCina provides an end-to-end offering, from cell line and process development to clinical and commercial drug substance and sterile fill-finish of drug products.

This comprehensive suite of services positions BioCina to meet the ever-growing demand for high-quality, integrated manufacturing solutions for clients.

Additionally, Australia provides attractive tax incentives (up to 43.5% cash rebates) for drug developers partnering with Australian CDMOs, making BioCina a cost-effective and strategic choice for drug developers looking to invest in scaling-up and manufacturing their products.

Mayne Pharma is a specialty pharmaceutical company focused on commercialising pharmaceuticals. **Mayne Pharma Services** is a full-service CDMO with more than 40 years of scientific expertise in drug discovery and development, clinical trials supply and commercial manufacturing. Headquartered in South Australia in a GMP-accredited facility, Mayne Pharma is FDA and TGA-compliant and holds mutual agreements with United Kingdom's MHRA, Health Canada and other European and Asian authorities.

Mayne Pharma Services' focus areas include formulation development and scale-up from concept to commercialisation, including modified release capsules and tablets, bioavailability enhancement using spray drying technology, fluid bed coating and granulation and others.

Mayne Pharma has a dedicated commercial team focused on the commercialisation of branded, generic and consumer products in Australia and New Zealand. With more than 255 staff members, including commercial, and 10 manufacturing suites dedicated to pharmaceutical development, they produce over 2 billion of capsules and tablets annually, more than 700 tonnes of semi-solid, liquid and topical product each year, and 45 million units of finished packaged products across all dosage per annum. Mayne Pharma currently export finished dose forms to more than 16 countries.

Molecular Imaging and Therapy Research Unit (MITRU)

Located within the South Australian Health and Research Institute (SAHMRI), the Molecular Imaging and Therapy Research Unit (MITRU) is dedicated to the research, development and manufacture of radiopharmaceuticals. Home to South Australia's only cyclotron - a particle accelerator that produces radioactive isotopes for use in medical imaging, treatment and research – MITRU supplies radiopharmaceuticals for hospitals and imaging centres all over Australia and for research purposes including clinical trials.

MITRU is GMP-accredited by the Australian Therapeutic Goods Administration (TGA) as a radiopharmaceuticals manufacturer, and in a world's-first for cancer scan innovation, it was the first recipient of a TGA licence to manufacture the fluorinated prostate specific membrane antigen for clinical use in 2019.

MITRU specialises in positron emission tomography (PET) imaging tracers. These tracers bind to target cells in the body and emit radiation which is detected by a PET scanner at the imaging facility. The scanner then combines the reading with a CT scan of the patient to show where in the body the target cells are located.

MITRU products include products utilising radionuclides Fluorine-18 [^{18}F], Copper-64 [^{64}Cu], Lutethium-177 [^{177}Lu], Zirconium-89 [^{89}Zr] and Gallium-68 [^{68}Ga].

MITRU is actively involved in researching new radiopharmaceuticals which target different cells in the body in order to image or treat new conditions.

Drug development and biotech

South Australia is a centre for medical research and drug development. Researchers focus on drug development across a wide range of indications including immunology, infectious diseases, neuroscience and endocrinology.

Oncology is a focus, including precision health, CAR-T cell technology, computational systems, epigenetics, single cell and spatial technologies, gene regulation, molecular signalling, translational oncology and cancer genomics.

Leading innovative biotechs

BiomeBank is commercialising the world's first approved donor derived microbiome therapy and is at the forefront of developing therapies that treat disease through restoration of gut microbial ecosystem. BiomeBank has developed a breakthough co-culturing platform enabling the generation of artificial human gut microbial community in a bioreactor – the CONSORTIOME™.

Clinical-stage **Carina Biotech** is developing next-generation CAR-T technologies to treat solid cancers. Carina Biotech has a fully integrated, proprietary manufacturing process reducing time and improved effectiveness for patients.

Clinical-stage oncology company **Aucentra Therapeutics** has a pipeline of seven targeted anticancer drugs including candidates for the treatment of leukaemia, breast cancer, colorectal cancer, glioblastoma, lung cancer, prostate cancer and ovarian cancer, with the lead candidate having finalised a Phase I/IIa study.

Bionomics/Neuphoria is a clinical-stage company developing a pipeline of novel, ion channel targeting drug candidates designed to transform the lives of patients suffering from serious central nervous system disorders. Bionomics has recently been acquired by Neuphoria and has re-domiciled to the United States of America.

Transforming vaccines

Several new vaccines and a range of novel platforms are being developed by South Australian companies. These companies are all currently in-clinic and include viral vector, whole-cell vaccine, and vaccine adjuvant technologies.

GPN Vaccines is a clinical-stage company focused on creating innovative vaccines via a whole-cell approach that offer robust protection against the world's most important bacterial pathogens, including invasive pneumococcal disease, chronic obstructive pulmonary disease, otitis media, invasive group A streptococcus disease and streptococcus suis infection. One example is the Streptococcus pneumoniae vaccine, aimed at providing broad-spectrum immunity across all 100 known serotypes including life-threatening pneumonia, bacteraemia, meningitis and middle ear infections.

Sementis is building Australia's most technologically advanced viral vector vaccine platform. The Sementis Copenhagen Vector (SCV) platform is designed to provide a long lasting, economical and effective vaccine delivery platform that can be adapted to rapidly respond to emerging bio-threats and treat diseases of high unmet medical need including allergies. The pipeline of vaccines currently includes Mpox, Chikungunya/Zika and Pan-Coronavirus, as well as a vaccine targeting peanut allergy.

Other leading research includes mRNA, DNA, formulation and lipoparticles, as well as bioengineering and manufacturing process development.

Leading the nation in artificial intelligence for healthcare

South Australia is well-placed to be a global leader in medical artificial (AI) intelligence thanks to its abundance of digital health assets and its research capability. Adelaide is Australia's home for AI and data analytics-driven innovation and is leading the nation in AI for healthcare.

With a robust healthcare system and advanced data management capabilities, South Australia is uniquely positioned to develop, apply, and commercialise AI solutions for global health problems. South Australia is embracing the ability for AI to deliver the biggest transformative impact to healthcare.

South Australia has a proven history of effective government, industry and academia collaboration, delivering greater efficiency in the health system, optimising operational and clinical decision-making and improving patient outcomes.

South Australia's integrated health ecosystem, combined with its globally unique datasets, provides the state with a distinct advantage in AI-driven personalised healthcare innovation. Key assets enabling this industry transformation include world-leading hi-tech capabilities and SA Pathology's biospecimen assets and **a database of 3.5 million unique patient records, containing over 21 billion data points and more than 80 years of historical pathology data.**

Major AI research capabilities in South Australia include:

- The Australian Institute for Machine Learning (AIML)
- MIT Connection Science: Adelaide Living Lab
- Australian Research Centre for Virtual and Interactive Environment (IVE)
- Amazon Web Services
- The University of Adelaide's Centre for Augmented Reasoning.

Australian Institute for Machine Learning

Australia's first facility solely dedicated to artificial intelligence research. The Australian Institute for Machine Learning (AIML), one of Australia's largest AI capabilities, conducts globally competitive research and development in machine learning, artificial intelligence, computer vision and deep learning.

AIML is recognised for its world-leading research in AI ethics and safety in health capability, particularly in clinical imaging. It is partnering with the world's leading healthcare companies to ensure that patient safety is at the centre of the digital health innovation that will transform health outcomes for the global community. Together with leading global companies including Roche, GSK, and Medtronic, AIML is pushing the frontier of precision health.

Massachusetts Institute of Technology – Connection Science: Adelaide Living Lab

The Government of South Australia's partnership with the Massachusetts Institute of Technology (MIT) Connection Science links South Australia to MIT's world-leading data analytics capabilities and the ability to bring together experts to develop, deploy, and test new technologies and strategies built on safe and trusted data sharing. The collaboration focuses on exploring and developing secure data exchange platforms in health, net-zero and trade finance. Together they are the foundation of the state's knowledge ecosystem, generating new expertise and technologies.

Industrial AI Research Centre

The University of South Australia's Industrial AI Research Centre is at the forefront of transforming healthcare with innovative AI and data-driven solutions. Their multi-disciplinary team of experts collaborates with healthcare professionals and organisations to revolutionise patient care, diagnostics and medical research.

Key focus areas include health data analytics and informatics, digital health and the development of AI-driven algorithms, with applications in healthcare decision-making and patient centric approaches.

Australian Research Centre for Interactive and Virtual Environments

The Australian Research Centre for Interactive and Virtual Environments (IVE) is a unique alignment of computer science, engineering, art, architecture and design. IVE is responding to the challenge of increased global demand for augmented reality (AR) and virtual reality (VR) technologies, with leading research including wearable computing, interface design, empathic computing, 3D visualisation, perception and telepresence. Their Design Research for Health and Wellbeing (DRHW) group is home to a cross-disciplinary network of professionals including researchers, computer scientists and healthcare workers, merging design, healthcare, and immersive digital experiences to help tackle major health and wellbeing issues.

Case studies: AI is changing the way we think health

Harnessing AI for preventative healthcare

Leveraging SA Pathology's 80-year long continuous pathology data and South Australia's advanced capabilities in emerging technologies, research labs in Adelaide have developed AI systems capable of identifying health risks in high-risk patients before they occur.

Based at the Royal Adelaide Hospital, researchers from AIML, SA Pathology, the MIT Connection Science-Adelaide Living Lab and IVE built a software system that alerts doctors if a patient is at higher risk of requiring hospitalisation.

By looking at the blood tests showing early signs of prediabetes and, if there are patterns and trends in certain geographic hotspots, doctors in those areas can get an early warning about what to focus on.

SA Pathology aims to further increase the use of AI to improve preventative health care, speed up manual time-consuming tasks and lower costs to deliver better public health outcomes, focusing on three key areas: clinical decision making, disease surveillance and population health management.

In addition to those three key areas, AIML's engineers are working towards ways of improving digital pathology services. Areas of interest include cell counting through a deep learning network to capture pathologists' annotations to learn how to trace each cell in an image, reducing the time pathologists need to work on pathology images.

Source: Australian researchers develop system to ID high-risk patient conditions

SMART–PH – Digitising information for practice in public health

In a milestone demonstration of South Australia's AI expertise and capabilities, Flinders University is leading the development of Australia's first AI-driven integrated public health and clinical data platform, SMART-PH (DigitiSing InforMAtion for PRacTice in Public Health).

Designed to tackle the lack of real-time, high-quality public health data and pressing healthcare challenges, including pandemics and natural disasters, the SMART-PH project will create a common digital infrastructure capable of eliminating data silos and enabling real-time collaboration in healthcare decision-making. This is also particularly beneficial for improving healthcare in remote and rural regions.

Launched in 2024, the project was awarded nearly AUD$3 million from the Medical Research Future Fund 2023 National Critical Research Infrastructure initiative. Implementation and evaluation with key South Australian partners is scheduled from 2027 to 2029.

Global technology leaders are here

These leading technology companies continue to build around South Australia's connected technology ecosystem driving global businesses well into the future.

accenture

"We are incredibly proud of the success of our Adelaide capability and our contribution to the growth of Australia's sovereign capabilities. Adelaide is a highly attractive destination for companies and first-class talent looking to deliver technological and scientific excellence and we are privileged to be a part of this momentum.

Peter Burns,
CEO Accenture Australia and New Zealand

aws

"Amazon Web Services recognise that South Australia has a rich community of both innovation and entrepreneurship, and we're excited to continue to support our customers and partners in South Australia out of our office in the innovation district of Lot Fourteen in Adelaide."

Rianne van Veldhuizen,
Managing Director, Amazon Web Services ANZ

Commonwealth Bank

"The focus on Cyber Security and AI within Adelaide and Lot Fourteen, and the depth of the local talent pool in these topics are big attractors for us. AI and data are key to the next generation of digital personalisation, and the local focus on Augmented Reasoning, in particular, is very exciting when we think about how we can use AI technology to better empower our staff to serve our customers."

Brendan Hopper,
CIO for Technology, Commonwealth Bank of Australia

Deloitte.

"We have chosen Adelaide as the home of our first Australian Centre for Innovation and Technology because we have enormous confidence in the South Australian economy and the exceptional talent market that exists in the region."

Hendri Mentz,
Adelaide Office Managing Partner

Microsoft

"Having maintained a presence in South Australia for over 30 years, it has been wonderful to see the significant development of the local ICT industry over the last few years. Adelaide is fast becoming a hub for technology innovation and we're excited to continue our commitment to the state."

Mark Cuggy,
State Manager, South Australia

MIT Connection Science
the technology of innovation

"South Australia is quickly becoming a leader in the world's emerging digital economy, with its research leadership in data and AI, bringing partners from around the world to develop solutions relevant not only for Australia but also for the entire IndoPacific region."

Professor Alex 'Sandy' Pentland,
Massachusetts Institute of Technology

World–class innovation places

Our sectors co-exist in hi-tech hubs and research centres, forging collaborative ecosystems that open doors and inspire new ways of thinking.

Roseworthy Campus 50kms from central business district

Part of the University of Adelaide, a hub of undergraduate teaching, postgraduate training, research and clinical services with an international reputation for excellence in dryland agriculture, natural resource management and animal production.

Edinburgh Defence District 34kms from central business district

Key national defence research, manufacturing and sustainment hub housing the RAAF Base Edinburgh, Defence Science and Technology Group and major defence companies.

Edinburgh Parks Precinct 34kms from central business district

The precinct is part of a key food manufacturing, food service, defence and transport industry hub. Located in a major industrial growth corridor connected by Adelaide's Northern Expressway and located adjacent to some of South Australia's fastest growing council areas ensuring access to suitable labour.

Osborne Naval Precinct 26kms from central business district

Australia's premier naval industry hub and one of the world's most technologically advanced naval shipyards in the world, which includes new capability to build the SSN-AUKUS nuclear submarines.

Technology Park 17kms from central business district

Hub for systems development and integration, information communications technology, advanced manufacturing and electronics, and home to over 100 small to medium enterprises, multinationals and start-ups.

Adelaide BioMed City Adelaide central business district

AUD$3.8 billion health and medical innovation district with leading-edge anchor institutes, including the South Australian Health and Medical Research Institute (SAHMRI) and the Royal Adelaide Hospital (RAH), and companies that cluster and connect with start-ups, business incubators and accelerators.

The University of Adelaide Adelaide central business district

With three main campuses in South Australia, and over 150 years of educational experience, recognised globally as a leading research university ranked in the world's top 130 universities. Distinguished alumni of five Nobel Laureates, over 100 Rhodes Scholars, including Australia's first Indigenous recipient, and Australia's first female prime minister and Supreme Court judge.

Lot Fourteen Adelaide central business district

Australia's first ideas and innovation neighborhood and home to the Australian Space Agency, SmartSat CRC, Defence and Space Landing Pad, Stone & Chalk start-up hub, MIT Adelaide Living Lab, Australian Institute for Machine Learning and the Australian Cyber Collaboration Centre.

University of South Australia Adelaide central business district

Australia's University of Enterprise on the global stage; partnered globally and nationally with academic, research and industry leaders with six campuses. Offering degree programs including business, law, education, arts and social sciences, health sciences, information technology, engineering and the environment.

Waite Research Precinct 7kms from central business district

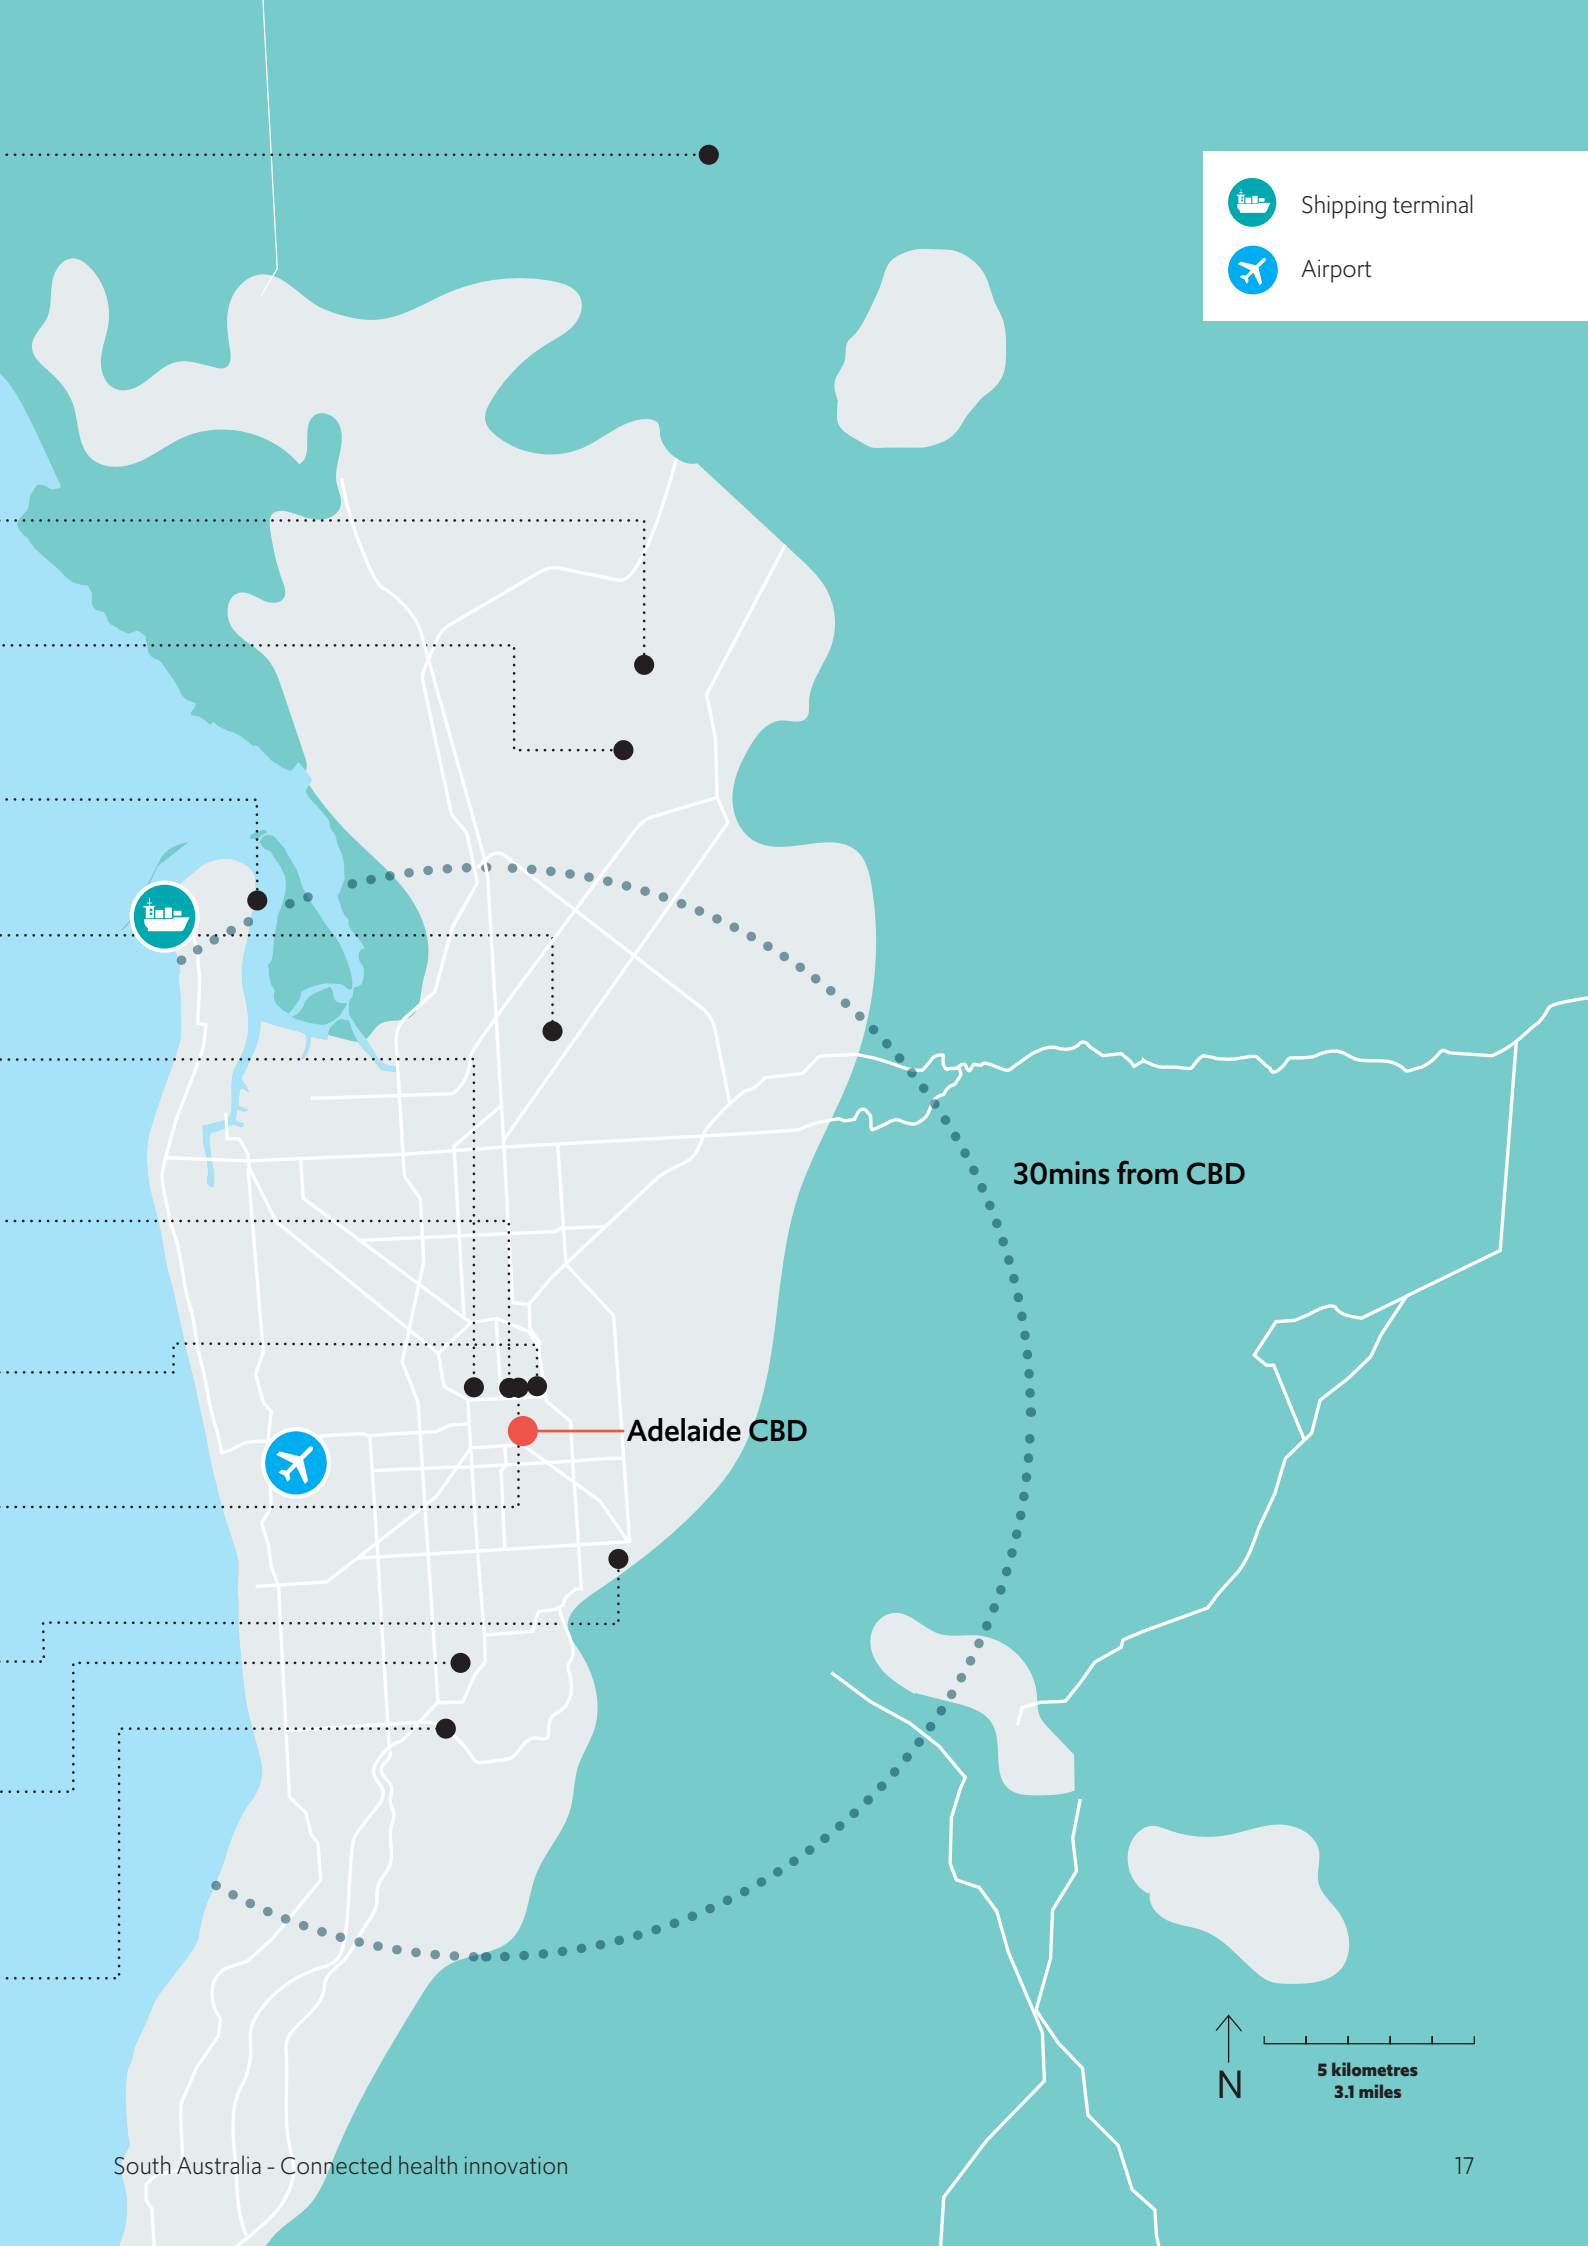

Part of the University of Adelaide, home to the largest concentration of agriculture and wine research and teaching expertise in the Southern Hemisphere and a leading centre of Australian research capability in wine, grains, soil and plant breeding.

Tonsley Innovation District 12kms from central business district

Home to high-value manufacturing industries including defence, health, medical devices and assistive technologies, clean tech and renewable energy, software and simulation, and minerals and energy services. Home to Flinders Factory of the Future advanced manufacturing test bed, South Australia Drill Core Reference Library, SA-H2H Hydrogen Technology Cluster, Hydrogen Park SA, BAE Systems Maritime Australia, Micro-X and the Medical Device Research Institute.

Flinders University 13kms from central business district

For over 50 years, Flinders has been a centre of inspiring achievement, from pioneering research and excellence in teaching to the positive impact the university has on the communities it serves. Three main campuses provide future-focused, internationally recognised degrees with flexible study options.

Biotech

BiomeBank

P: +61 (08) 7223 0075
W: www.biomebank.com
Linkedin: BiomeBank
Address: Level 3, 21-24 North Terrace, Adelaide 5000, South Australia, Australia

BiomeBank is an Australian biotechnology company leading the development of co-cultured microbiome-based therapies. Their proprietary CONSORTIOME™ platform enables the targeted cultivation of stable, defined microbial consortia, overcoming the limitations of donor-derived approaches and unlocking new therapeutic potential.

With the world's largest gut microbiome collection, BiomeBank is at the forefront of microbiome drug development. Their lead candidate, BB265, a live biotherapeutic product (LBP) for ulcerative colitis, has over 100 carefully selected strains that collectively deliver over 93 per cent of the therapeutic function of a healthy microbiome. Through advanced co-culturing techniques, BiomeBank engineers complex microbial communities under controlled conditions, ensuring consistency, scalability, and efficacy.

BiomeBank has transformed the regulatory landscape for microbiome-based medicines, securing the world's first regulatory approval for a microbiome therapy and setting new standards for quality and safety in the field. Their research and production facility in South Australia integrates cutting-edge microbiology, bioinformatics, and bioprocessing to develop high-quality, clinically validated therapies.

With a strong pipeline and a clear commercial pathway, BiomeBank is shaping the future of microbiome therapeutics.

BiomeBank welcomes collaboration with biopharma companies and investors to harness the full potential of the microbiome in transforming human health.

Objectives:

- Seeking strategic partnerships with biopharma companies and investors.
- Advancing BB265, BiomeBank's lead live biotherapeutic product (LBP) for ulcerative colitis.
- Establishing CONSORTIOME™ as the world's most advanced microbiome-based drug discovery platform.
- Restoring gut microbial ecology.
- Expanding BiomeBank's pipeline of co-cultured microbial therapies for a range of clinical indications.
- Scaling BiomeBank's production capabilities at their South Australian research and manufacturing facility.
- Leading regulatory advancements to set new standards for microbiome drug development.

Address: Level 2, Ian Wark (IW) Building, UniSA Mawson Lakes Campus, Mawson Lakes 5095, South Australia, Australia

Carina Biotech (Carina) is clinical stage, immuno-oncology company developing CAR-T and other adoptive cell therapies for the treatment of solid cancers. Its lead candidate, CNA3103, targets LGR5, a cancer stem cell marker, and is in development for the treatment of metastatic colon cancer with early promising clinical results. Colon cancer represents a significant unmet clinical need with large market potential. It is the second leading cause of cancer deaths with an estimated therapeutics market of US$16.53 billion per annum in 2024. Additional indications include gastric cancer (estimated US$5.32 billion), ovarian cancer (estimated US$5.16 billion), head and neck cancer (estimated US$1.7 billion) and neuroblastoma (estimated US$2.78 billion).

In addition to CNA3103, Carina has a pipeline of CAR-T programs as well as platform technologies for the positioning of CAR-T cells within solid tumours, to enhance potency and induce "serial" killing that is capable of memory. Using its proprietary chemokine receptor platform, Carina aims to improve access to and infiltration of solid cancers by CAR-containing cells, resulting in more potent and specific cancer killing and reduced off-target effects. Carina also has a fully integrated, proprietary five-day manufacturing process that has an improved CAR-T cell quality, capable of delivering robust "serial-killing" CAR-T cells to patients.

Objectives:

- Seeking investment for a Phase II LGR5 targeted CAR-T (CNA3103) clinical.
- Establishing strategic partnerships and collaborations to further develop the Carina CAR product portfolio.
- CAR co-development opportunities.

Address: Level two, Tech Central, Lot Fourteen, Frome Road, Adelaide 5000, South Australia, Australia

Qubigen is an exciting new venture that combines Federated AI technology, quantum chemistry and AI drug design capabilities. Qubigen's mission is to create the largest global federated proprietary dataset and computational toolbox for AI-driven drug design.

This means that multiple entities such as pharmaceutical and biotech companies can work on new molecule discoveries at the same time, thereby shortening drug development pipelines.

Federated AI enables a global 'collaborative-first' approach by significantly increasing the access to health technology to a broader range of collaborators. This means that multiple research institutes and industry can work on novel molecule discoveries at the same time, thereby shortening drug development pipelines.

Qubigen has raised seed funding from SYNthesis BioVentures (via Professor Andrew Wilks), hitting its early milestones successfully and showing the effectiveness of its innovation for initial clients.

Objectives:

- Connecting with investors for significant Series A enabling expansion into the United States.
- Seeking to expand into the United States by raising a significant Series A round.
- Collaborating or partnering with large biotech or pharma organisations, CROS, foundations and institutes.

Address: Ground Floor, 21-24 North Terrace, Adelaide 5000, South Australia, Australia

CMAX Clinical Research been a leader in delivering early phase clinical trials for over 30 years, making it one of the most respected clinical trial businesses in Australia. Their modern custom-built facility is equipped with 78 inpatient beds and located opposite Royal Adelaide Hospital and Adelaide's Bio-Med City, providing ready access to state-of-the-art facilities, equipment and world-class medical and pharmacology specialists.

As Australia's longest-operating early phase unit, CMAX conducts successful world-leading research for local and international clients, specialising in a range of early-phase trials and first-time-in-human studies (FTIH).

Objectives:

- Engaging with biotech companies, pharma, CROs and collaborators interested in discussing early phase clinical trials in Australia.
- Reconnecting with companies previously met to explore further collaboration opportunities.

News:

- CMAX Clinical Research celebrates its 30th anniversary[6]

Clinical sites

P: +61 (08) 7074 4404
W: PARC Clinical Research
Address: Port Road, Adelaide 5000, South Australia, Australia

PARC Clinical Research (PARC) is an established high acuity multi-specialty clinical trial unit with dedicated beds and staff, embedded in a large tertiary teaching hospital.

PARC is located within the Royal Adelaide Hospital (RAH), South Australia. It has 10 beds suitable for day and outpatient visits through to Intensive Care level, with all the specialist clinical and diagnostic services available at a large tertiary teaching hospital. Co-located with a 10-bed postoperative high acuity care unit, PARC has a unique advantage that ensures immediate access to a range of specialist clinical staff across all fields of healthcare, along with the investigative and treatments available within the hospital.

PARC has experienced clinical and administrative staff dedicated to the conduct of clinical trials from Phase I (first-in-human) through to later Phase II/III across all medical specialities. PARC has multiple clinical trials underway, both in healthy volunteers and patients. PARC is involved in trial planning, protocol design and writing, trial conduct, strategic product development, and discussions with potential investors. PARC can also assist with product strategy.

PARC's Director, Professor Guy Ludbrook is a practicing specialist in anaesthesia and perioperative medicine, and a research pharmacologist with a PhD in pharmacokinetics and pharmacodynamics. He is aqualified health economist. Professor Ludbrook has a very extensive track record in academia, industry research and clinical trials. PARC's Manager, Ms Kathy Heyman, is a registered nurse with vast expertise in managing clinical trials.

PARC's location, combined with its capable and experienced staff makes it a flexible, efficient and highly regarded location to conduct clinical trials.

Objectives:

- Collaborating with sponsors, investigators and CROs for conduct of clinical trials.
- Developing new connections with sponsors, investigators, and CROs globally.
- Showcasing PARC's activities and capabilities through improved visibility with industry.
- Strengthening collaboration with existing partners.

W: www.socru.org.au
Linkedin: Southern Oncology Clinical Research Unit (SOCRU)
Address: Level 3, Mark Oliphant Building, 5 Laffer Drive, Bedford Park 5042, South Australia, Australia

Southern Oncology Clinical Research Unit (SOCRU) is a dedicated Phase I private clinical research site in Adelaide, South Australia, committed to advancing cancer research and providing exceptional, evidence-based, patient-centred care. Led by a team of five experienced oncologists, SOCRU specialises in conducting clinical trials involving cytotoxic agents, targeted therapies, immunotherapy, and genetically modified organism therapies. The Unit is renowned for successfully managing complex studies, particularly those involving high-reaction-risk products and extended pharmacokinetics (PK) collection timepoints.

With a proven track record in swift startup timelines, SOCRU excels in regulatory submissions and rapid trial initiation. The Unit is also recognised for its strong recruitment rates, consistently enrolling eligible patients efficiently and effectively across a wide range of trials.

Their facilities include:

- Day infusion suite
- Overnight beds for prolonged admissions
- 24-hour patient monitoring
- Out of hours include late and weekend PK sample collection and processing
- Access to telemetry and 24-hour cardiac monitoring
- Private consulting rooms
- On-site radiology provider
- Biosafety PC2 level laboratory access
- Hospital emergency services department on call (MET calls)
- Access to ICU beds, if required

Objectives:

- Identifying and connecting with potential sponsors, CROs, and biotech companies to secure new clinical trials for SOCRU over the next three years.
- Establishing and strengthening strategic relationships with industry stakeholders to position SOCRU as a preferred site for clinical research in Australia and South Australia.

E: info@biocina.com
W: www.biocina.com
Linkedin: BioCina
Address: 8 Dalgleish St, Thebarton 5031, South Australia, Australia

BioCina is a leading global contract development and manufacturing organisation (CDMO) providing end-to-end solutions for biologics and small molecules. Following their strategic merger with NovaCina, BioCina now offers fully integrated drug substance and drug product manufacturing services to streamline complex development programs and accelerate time to market.

BioCina's Adelaide facility specialises in biologics drug substance manufacturing, specifically microbial, plasmid DNA (pDNA), mRNA, and lipid nanoparticle (LNP) modalities, supporting both clinical and commercial production. Their Perth facility offers advanced sterile fill-finish capabilities, including Blow-Fill-Seal (BFS), cytotoxic and non-cytotoxic vial filling, pre-filled syringes, and cartridges.

With a strong regulatory track record, BioCina's facilities meet global compliance standards, including US FDA, EMA, Health Canada, and TGA. Their client-centric approach, elite quality standards, and industry-leading on-time delivery ensure that drug developers worldwide have a reliable partner from early development to commercial production.

Objectives:

- Meeting with drug developers that are in need of BioCina's capabilities and services.
- Meeting with VC/PE firms with portfolio companies in need of BioCina's capabilities and services.
- Meeting with companies with which there is a strong potential for a mutually beneficial partnership due to synergies between BioCina's and their offerings.

Linkedin: Avance Clinical
Address: Global HQ: 213 Glynburn Rd, Firle 5070, South Australia, Australia
North America HQ: 525 South White Street, Wake Forest NC 27587, United States

The Australia-based global CRO for biotechs.

Avance Clinical (Avance) is a full-service CRO headquartered in Australia, with extensive operations across New Zealand, Asia, North America, and Europe. As the market leaders in early phase clinical trials, Avance leverages the unique advantages of the Australian market, including rapid ethics approval, no investigational new drug (IND) requirement, and the 43.5 per cent Research and Development Tax rebate Incentive, to provide biotechs with an accelerated pathway to clinical success.

Specialising in world-class operations, Avance guides biotechs from early pre-clinical development through to late-phase studies. With a focus on agility, innovation, and cost-effectiveness, they deliver fast results backed by robust, globally accepted data.

With expertise spanning over 250+ indications, across all therapeutic areas, over the last three decades, Avance Clinical consistently delivers data recognised by key global regulators, including the TGA, FDA, EMA, MHRA, MFDS, and PDMA. Their success and differentiation stems from providing personalised service tailored to each client, ensuring customised, flexible solutions rather than a one-size-fits-all approach.

Objectives:

- Connecting with biotech innovators– engaging with biotech companies to explore tailored clinical trial solutions.
- Showcasing Avance's global services – highlighting Avance's ClinicReady (preclinical to Phase I), Australian advantage (early-phase trials with rapid start-up and rebate benefits), Asia Advantage (expanding patient access and regulatory expertise in Korea and beyond), GlobalReady (seamless transition from Australia to U.S. trials), and North America Advantage (expert late-phase trial execution).
- Discussing the Australian advantage – explaining the benefits of conducting early-phase trials in Australia, including the 43.5 per cent rebate and fast regulatory pathways.
- Strengthening CRO partnerships – supporting biotech clients with strategic clinical trial partnerships across Avance's key regions.
- Exploring emerging trends – staying ahead of biotech advancements to refine Avance's clinical trial strategies and regulatory expertise.

W: www.syneoshealth.com
Linkedin: Syneos Health
Address: Level 24, RAA Tower, 91 King William St, Adelaide 5000, South Australia, Australia

As a global organisation, Syneos has offices, services and employees across North America, APAC (including China, Japan, India, New Zealand, South Korea, Southeast Asia, Hong Kong and Taiwan), Latin America, Europe, Middle East and Africa.

Syneos has operated in Australia since 1997, with their head office located in Adelaide, South Australia. With 28 years of local experience and knowledge in clinical trials, Syneos can help you understand the local Australian clinical trial environment. Syneos' Australian-based team can support you in taking advantage of the Research and Development Tax Incentive and leveraging their long-standing relationships with Australian sites, Phase I units and local vendors. You will have executive support on the ground, advocating for your success with a General Manager based in market, providing support as needed.

Syneos delivers integrated clinical, commercial and medical affairs expertise to accelerate your success by creating efficiencies, reducing time to market and improving ROI. They achieve this by working collaboratively with their customers in a problem-solving way.

Objectives:

- Seeking new relationships with potential biotech customers looking to conduct clinical trials in Australia or New Zealand.
- Engaging with biotech companies looking to conduct global clinical trials or to expand their study into new countries or regions.
- Building upon existing relationships with Australian biotech companies, sites and vendors.
- Seeking customers who are looking for commercial solutions such as brand strategy, payer engagement/communications and deployment solutions.
- Connecting with biotech companies looking for medical affairs solutions such as evidence generation, stakeholder engagement, RWLP and data analytics.

CLEVER CULTURE SYSTEMS

P: +61 (08) 8227 1555
W: www.cleverculturesystems.com
Linkedin: Clever Culture Systems
Address: HQ: 16 Anster Street, Adelaide 5000, South Australia, Australia
United States: 80 Technology Drive, Irvine CA 92618, United States

Clever Culture Systems (ASX: CC5) is an Australian biotechnology leader developing AI-powered microbiology solutions. Their flagship product, the Automated Plate Assessment System (APAS®), addresses a critical global challenge in pharmaceutical manufacturing where millions of culture plates are manually processed yearly. APAS® uses patent-protected machine learning and intelligent imaging to automate the interpretation and reporting of microbial growth on culture plates, supporting the sterility and compliance requirements for safe production of drugs.

Following a decade of development, Clever Culture Systems launched APAS® in 2024. Major pharmaceutical companies including AstraZeneca, Bristol Myers Squibb, and CDMOs such as Thermo Fisher Scientific have adopted APAS®. With blue-chip customers in place and additional sales completed, there is a substantial market opportunity for APAS® to become the new standard in pharmaceutical microbiology automation.

Objectives:

- Connecting with pharmaceutical manufacturing organisations, building awareness of the APAS® solution.
- Seeking potential partners with complementary products or services that could align with the APAS® platform.
- Partnership opportunities may include distribution or technological advancement through combined technologies.
- Seeking new investors.

News

- Blue-chip customers (eg AstraZeneca, Bristol Myers Squibb) underpin path to sustainable positive cash flow
- Product sales transition Company to maiden profit in HY25
- Growing pipeline of large global pharmaceutical companies supports confidence in sales outlook[17]

Bb Bellberry Limited
supporting research and ethics

P: +61 (08) 8361 3222
E: bellberry@bellberry.com.au
W: www.bellberry.com.au
Linkedin: Bellberry Limited
Address: 123 Glen Osmond Road, Eastwood, South Australia, Australia 5063

Bellberry Limited is an Australian award-winning independent, not-for-profit organisation offering Human Research Ethics Committee (HREC) services.

Driven by two key objectives – to protect the welfare of research participants and improve the quality, efficiency and effectiveness of research, Bellberry provides high-quality, time-efficient, and internationally accredited scientific and ethical review of research projects.

Established in 2004, Bellberry is Australia's single largest reviewer of clinical research, providing specialist HREC oversight to 43 per cent of Clinical Trial Notification (CTN) registered clinical trials across all phases of clinical and device trials, as well as for social and behavioural studies.

In 2024, Bellberry was honoured as the national winner of the Telstra *Best of Business* award for Championing Health highlighting its support of advancing research.

Participant wellbeing is at the centre of all that Bellberry does. Unique within the research sector, Bellberry reinvests the surplus funds generated by the activities of its Human Research Ethics Committees back into the Australian medical research community through philanthropy and education.

It is the only organisation in Australia to gain the "gold seal" of accreditation from the Association for the Accreditation of Human Research Protection Programs (AAHRPP) for excellence and ethically sound processes in running Human Research Ethics Committees.

Objectives:

- Interacting with US and international sponsors and complementing their understanding of the Australian regulatory environment.
- Facilitating discussions between US and international sponsors and Australian clinical trials organisations.
- Supporting clinical trials ecosystem development in Australia and South Australia by facilitating investment in the sector.
- Supporting conversations to build the understanding of the process to start up and conduct clinical trials in Australia.

Expeditionary health systems

P: +61 (08) 8227 1555
W: www.sabrntech.com
Linkedin: SABRN
Address: 19 Hayman Retreat, Craigburn Farm 5051, South Australia, Australia

SABRN is an Australian-veteran-owned, South-Australia-based purpose-driven group of companies that aims to revolutionise healthcare delivery by making high-quality, life-saving medical care available, affordable, and scalable for all. Their innovative system-of-systems approach shifts the traditional 'patient-to-hospital' model to a 'hospital-to-patient' paradigm, leveraging the cutting-edge 'SABRN LifePods' which integrate multiple advanced technologies, including diagnostic, treatment, and telementoring solutions.

The SABRN LifePods are compact, modular, scalable, and transportable medical units designed for deployment in remote, underserved, and disaster-stricken areas. These domain-agnostic and vehicle-agnostic units provide critical care capabilities, enabling early stabilisation and intervention before patient transport. Integrated telemedicine and augmented reality solutions empower frontline providers with real-time guidance from specialists, bridging the gap in healthcare access across rural communities, mining industries, indigenous populations, and conflict zones. SABRN is committed to affordability through scalable manufacturing, AI-driven efficiencies, and sustainable partnerships, ensuring our solutions remain viable for governments, humanitarian agencies, and healthcare providers worldwide.

With applications spanning civilian, defence, and disaster response, their goal is to reduce preventable deaths and improve health equity for the 50 per cent of the world's population who do not have timely access to care.

Milestones:

- Arctic Warrior Technical Experiment 25-1: Invited to participate in the Arctic Warrior Technical Experiment, hosted by USSOCOM and NORSOCOM in January 2025 at Camp Rødsmoen, Norway.
- Austrade Delegations: Participated in Austrade delegations to Eurosatory 2024, SOF Week 2024, Association of the United States Army Convention 2023, and Sea-Air-Space 2023.
- Defence Trailblazer Alumni 2024: Recognised as part of the Defence Trailblazer Alumni in 2024 for contributions to defence innovation.
- G20 Space Economy Leaders Forum 2023: Presented as an Australian industry representative at the G20 Space Economy Leaders Forum in 2023. For more detailed information, please visit SABRN official website (www.sabrntech.com).

Objectives:

- Establishing strategic partnerships with global healthcare providers, biotech firms, and investors to scale LifePod technology.
- Seeking funding and collaboration for advanced manufacturing, AI-driven healthcare solutions, and remote medical technologies.
- Showcasing SABRN LifePods as a scalable solution for affordable, accessible healthcare in remote and underserved regions.
- Engaging with government agencies and humanitarian organisations to explore deployment in disaster response and global health initiatives.
- Expanding SABRN Health's global footprint, particularly in North America, Europe, and Asia, to drive innovation in portable and telemedicine-enabled healthcare solutions.

Madderns Patent & Trade Mark Attorneys (Madderns) is a leading, privately-owned patent and trade mark attorney firm that helps businesses and organisations navigate the complexities of intellectual property (IP).

Madderns has the experience, expertise and proven track record to provide the highly specialist IP services and commercially-astute advice needed to match the needs of all businesses in the biotech and pharmaceutical sectors. With a client base including businesses, both big and small, with interests in Australia, New Zealand and around the globe, Madderns is adept at meeting the varied needs of its clients and providing assistance at a local level or over distance, as needed.

Madderns' provides advice on:

- Designing and advising on appropriate searches
- Creating and enforcing patent, trade mark, design, and plant variety and domain name rights
- Providing strategies and advice concerning third party IP rights and IP disputes.

Madderns is driven by the opportunity to contribute to its client's successes, and places a high emphasis on developing long-term relationships.

Objectives:

- Connecting with companies and organisations requiring IP advice.

THE UNIVERSITY of ADELAIDE

P: +61 (08) 8313 5208
W: www.adelaide.edu.au
Linkedin: University of Adelaide
Address: North Terrace, Adelaide 5000, South Australia, Australia

The University of Adelaide is a *Group of Eight* member, ranked in the Top 100 universities in the World, with a 150 year reputation for excellence in health, medical and life-sciences research and education.

The University's expertise spans biomedical research, drug discovery from targets to clinical trials, and population health studies. University research themes cover the life course - from reproduction, through vaccinations and metabolism, to ageing.

Research institutes provide focussed hubs of excellence and reach-through to end users, including the following.

- **SAiGENCI** (South Australian immunoGENomics Cancer Institute) – Transformative research in cancer epigenetics, computational systems oncology, resistance prevention, and tumour inflammation and immunotherapy.
- **IPAS** (Institute for Photonics and Advanced Sensing) – Trans-disciplinary experimental physicists, chemists, material scientists, biologists, and medical researchers, creating new sensing and measurement technologies.
- **RRI** (Robinson Research Institute) - Addressing reproductive and early life origins of health and disease with world-leading research.
- **AIML** (Australian Institute for Machine Learning) – Solving data-intensive approaches to medical data, medical imaging, patient monitoring, response coordination and drug development.
- **JBI** (Joanna Briggs Institute) – A global organisation promoting and supporting evidence-based decisions that improve health and health service delivery.

The University is also able to leverage expertise through leadership in the SABRE Alliance (Safeguarding Australia through Biotechnology Response and Engagement), fostering national scale, focused, dual-purpose solutions in sectors ranging from Defence Tech and Agricultural Tech to harnessing human bio-capabilities for broader societal benefits.

Objectives:

- Seeking opportunities that align with the University's strengths and technologies in R&D and commercialisation, including in priority fields of cancer, radiation protection, reproductive health, metabolism, RNA, and drug delivery.
- Seeking strategic partnerships and collaborations to further development of the University's pipeline portfolio of assets in pharmaceuticals, diagnostics and biotech.
- Networking with BIO delegates, linking into senior University of Adelaide contacts for R&D, business development and technology transfer.

W: www.unisa.edu.au
Linkedin: University of South Australia
Address: City West Campus, 9/9 Light Square, Adelaide 5000, South Australia, Australia

The University of South Australia (UniSA) is a leading public research institution located in Adelaide, recognised for its innovative approach to education and research. The university is committed to addressing societal challenges and advancing global knowledge, particularly in health and medical research, where it has a significant impact on both local and international health outcomes.

UniSA conducts ground-breaking research across a broad spectrum of health and medical fields, including biomedical sciences, cancer, cardiovascular health, neuroscience, mental health, and public health. A key player in this research is the Centre for Cancer Biology (CCB), which focuses on understanding the molecular mechanisms behind cancer and developing novel treatments. However, UniSA's commitment to improving health outcomes extends beyond cancer research.

The university is home to several other specialised research centres, such as the Allied Health and Human Performance Research Group and the Future Industries Institute, which focus on areas like rehabilitation, aging, and disease prevention. Researchers at these centres work collaboratively with hospitals, industry, and government agencies to translate scientific discoveries into real-world applications that enhance patient care and health systems.

Through its diverse health and medical research initiatives, UniSA plays a pivotal role in advancing medical knowledge, improving healthcare delivery, and shaping the future of health around the world.

Objectives:

- Actively seeking licensing deals, spin-offs, research partnerships, and other commercialisation opportunities to translate its cutting-edge research into real-world solutions.
- By collaborating with industry leaders, government bodies, and entrepreneurs, UniSA facilitates the commercialisation of innovations in various sectors, including health, technology, and engineering. The university's commitment to fostering entrepreneurship and knowledge transfer ensures that its ground-breaking discoveries reach the market, contributing to economic growth and societal wellbeing.
- UniSA provides a robust support system for researchers to develop and commercialise their ideas, enhancing the impact of their work both locally and globally.

Address: Level 2, 169 Pirie Street, Adelaide 5000, South Australia, Australia

RDI Partners is a national leader in the delivery of compliant, low-cost services that enable non-Australian groups to benefit from R&D Incentives through the establishment of an Australian presence.

RDI Partners is a long-standing and award-winning provider of a full range of professional corporate and R&D Incentive services delivered under one roof, with a single point of contact.

RDI Partners boasts a national footprint with the experience of over 2,000 R&D Tax registrations, supporting over a billion dollars in R&D and innovation investments.

RDI Partners competitive advantage in this highly specialised space is demonstrated by:

- An award-winning full-service model, including resident director and international tax advisory, under one roof.
- A strong track record of seamless service delivery, R&D Tax outcomes and overseas finding successes.
- Depth of technical expertise in R&D tax, biotechnology, tax and advisory.
- Solid alliances with CROs and industry networks.
- Low-cost and low-risk pricing model of a fixed quoted fee where fees are linked to outcomes with no ongoing monthly maintenance fees.

Objectives:

- Connecting with clinical stage biotech entities looking to conduct future clinical development activities in Australia, and assist them with benefiting from the quality, speed and cost benefits offered through the application of Australian R&D Incentives, including the 43.5% Australian Government R&D Tax Incentive.

Australia's most cost competitive business environment

South Australia's competitive business environment supports commercial success and scaling of operations.

South Australia offers a suitably skilled and scalable workforce with competitive premium central and non-central business district rental space and high staff retention rates.

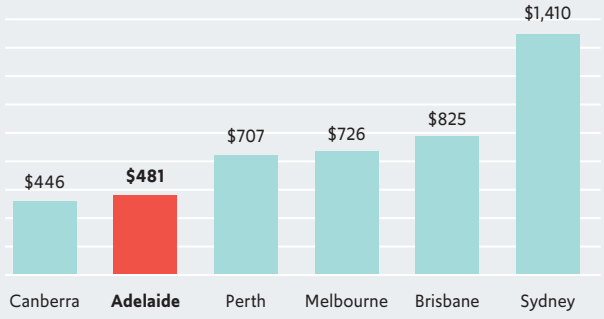

Adelaide prime CBD office rental space is:

68%
cheaper than Sydney

46%
cheaper than Brisbane

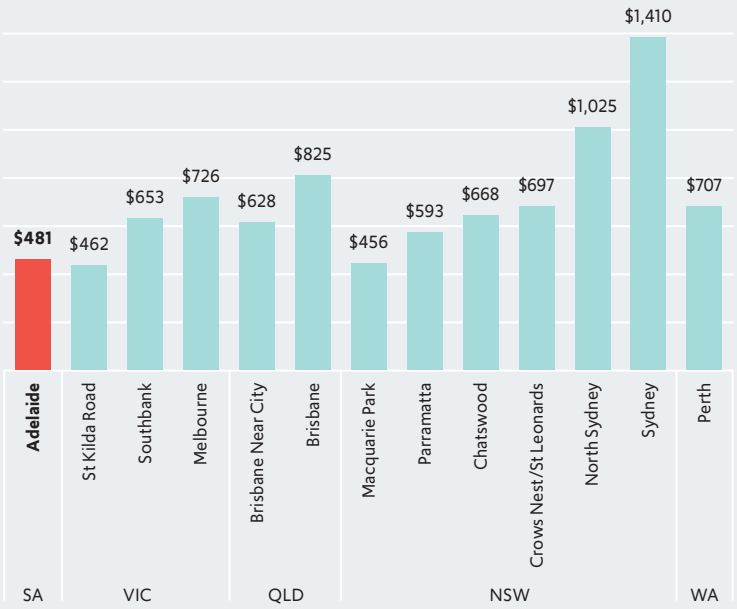

39%
cheaper than Melbourne

Prime CBD office space - net face rent (AUD/sqm pa)

Enviable lifestyle

From the city to the sea, South Australia offers the ultimate living experience with something for everyone.

Our state is a prime living destination for individuals and families alike, boasting a perfect combination of cultural experiences, picturesque landscapes, and a lively yet peaceful city centre, in a Mediterranean climate with warm, dry summers and mild winters.

Adelaide, our cosmopolitan capital city, has been named the *most beautiful city in the world* in 2024 by Architectural Digest and in November 2023 was named *Australia's coolest city* by The Wall Street Journal. It is one of Australia's safest cities and is consistently ranked as one of the world's most liveable cities by The Economist Intelligence Unit Global Liveability Index.

Whether you choose to be city, suburban or country based, you are guaranteed work-life balance, a family-friendly community and high-quality options for primary, high school and university students.

Family-friendly

South Australia enjoys excellent public and private education and welcoming family friendly experiences, including dedicated children's festivals like DreamBIG Children's Festival, Adelaide Writers' Week Young Readers' Day and free entry for children under 12-years-old for WOMADelaide world music festival.

With our extensive offer of safe and clean swimming beaches, adventure playgrounds and national parks, along with a superior lifestyle at an affordable cost, South Australia is the ideal state in Australia for families to live, work and play.

Top-level education

The high-quality education credentials of the state's private and public schools are showcased in the latest release of the *Better Education* analysis of 2023 academic outcomes. South Australia achieved top results, with every school in the top 50 achieving at least 90 out of 100 points and three high schools attaining a maximum score.

Immersive nature and wildlife experiences

South Australia's unique mixture of landscapes is home to incredible national parks and wildlife reserves, combining stunning scenery with once-in-a-lifetime wildlife encounters. From the Flinders Ranges to the Outback region and Kangaroo Island, there is something for all types of nature-lovers looking for adventure.

The South Australian coastline is more than 5,000 kilometres long and offers conventional and unique aquatic activities. From fishing, boating and surfing on Yorke Peninsula to oyster harvesting and whale watching in Eyre Peninsula, it is one of the only places in the world where tourists can cage dive with great white sharks and swim with giant cuttlefish.

Culture and events

Our state hosts world-class events catering for all interests across music, arts and culture, food and wine, wildlife, family fun, motorsports festivals and other adrenaline pumping activities.

Key attractions include Adelaide Fringe, Tasting Australia, Adelaide Festival, OzAsia Festival, WOMADelaide, Tour Down Under and LIV Golf.With a year-round calendar of large events, entertainment, culture and excitement, Adelaide, is known as the Festival City, Australia's first and only UNESCO City of Music.

World-renowned gourmet experiences

From culture rich Adelaide to the lush Adelaide Hills, the bountiful Barossa to the Eyre Peninsula, South Australia's food and wine scene continued to receive nationally and internationally acclaimed awards for our food, wine and experiences, including:

- 2025 Australian Tourism Awards' *Tourism Wineries, Distilleries and Breweries Gold award*
  - **Seppeltsfield Barossa (Barossa Valley)**
- 2025 World Cheese Awards' *Gold medal*
  - **Woodside Cheese Wrights' "Florence" cheese (Adelaide Hills)**
- 2025 and 2024 The Australian Good Food Guide's *One Chef Hat* award and HM Awards for Hotel & Accommodation Excellence's *Hotel Chef of the Year 2024*
  - **Luma Restaurant & Bar (Adelaide)**
- Trip Advisor's *#1 Small Hotel Award in Australia & South Pacific 2023-2024*
  - **Mount Lofty House (Adelaide Hills)**
- LUXLife Magazine's *Best Culinary Experience Hotel in the world for 2023-2024*
  - **Watervale Hotel (Clare Valley)**
