End-to-end clinical trial capabilities

South Australia's collaborative ecosystem connects deep clinical research, manufacturing and an end-to-end clinical trial supply chain with world-class infrastructure and digital capabilities for drug development, advanced manufacturing and health innovation.

As a strategic entry point for exploring the Australian trials sector, our expertise provides an efficient pathway to clinical trial conduct.

Start in South Australia to leverage the Australian Advantage

SPEED

- Efficient regulatory framework saves up to one year in regulatory timelines.
- Investigational new drug application (IND) not required for Phase I studies.

QUALITY

- Globally accepted data with the highest quality standards for submission to regulatory agencies including the US FDA, UK MHRA, EU EMA, and Japan PDMA.

VALUE

- 43.5% R&D tax incentive program.

South Australian Advantage

Australia's most experienced providers operate in South Australia, creating the nation's most comprehensive, connected and supportive clinical trial ecosystem providing leadership across the entire supply chain:

- Local ethics approval and an advanced ecosystem allows you to start trials in five to six weeks.
- Save by collaborating with experienced partners, providing specialist advice to be efficient, de-risk and add value to your trial exploration, setup and conduct.

Our globally unique ecosystem provides a trusted and connected environment for you to partner and innovate, maximising value for your organisation.

Complete clinical trial ecosystem

Clinical trials data accepted by global regulatory agencies

Australia's best longitudinal clinical data set

Statewide electronic medical record linked to Australia's largest pathology and medical imaging providers

World-class hi-tech capabilities

Artificial intelligence, augmented and virtual reality (AR/VR), quantum, data analytics and computer vision leadership

Word-class health and medical ecosystem

One of the world's most connected and technologically advanced precincts

State-of-the-art GMP manufacturing

R&D to commercial scale, small and large molecules and radiopharmaceuticals

Leader in cancer research, clinical translation and care

Including key opinion leaders, research institutions and isotope synchrotron for clinical research and care

43.5% R&D tax incentive program

Supporting companies across R&D activities in Australia

Advanced device manufacturing capabilities

Expertise and capability for ISO 13485

Leading biotech R&D

Concentration of world-class biotech including vaccine, microbiome and CAR T-cell research

Leading global innovation

South Australia:

- Gained the world's first microbiome therapy approval*
- Was the first to revolutionise x-ray technology**

More than 150 health companies within a 20-minute radius

Over 4,000 researchers and concentrations of deep health expertise

CosmosID 2022, Australia to Become the First Country to Approve Fecal Transplant to Restore Gut Health
***Australian National Fabrication Facility-South Australia 2020, Mobilising life-saving portable x-ray systems across the globe*

Data-driven and precision health innovation

Adelaide is home to world-leading artificial intelligence (AI), data analytics and virtual reality capabilities, supported by unique clinical infrastructure, longitudinal datasets and biospecimen for precision health innovation.

Connected innovation precincts

Adelaide's precincts connect world-class researchers, industry, government, academia, infrastructure, investment, teaching and clinical care, embedded with technological innovation.

This makes Adelaide and South Australia the perfect location to collaborate, innovate, and trial new products, for global commercialisation.

Manufacturing capability

Australia's commercial drug manufacturing pedigree was forged in South Australia. South Australia is home to the nation's leading academic manufacturing resources and established commercial operations.

South Australia's contract development and manufacturing organisations (CDMOs) support process development through to clinical and commercial scale for global markets to Good Manufacturing Practice (GMP) for biologics, small molecules and radiopharmaceuticals.

Expertise areas span across therapeutics (biologics and small molecules), vaccines, medical devices, nutraceuticals, traditional medicines, and radiopharmaceuticals to GMP requirements.

Drug development and biotech

South Australia is a centre for drug research across a wide range of indications including immunology, infectious diseases, neuroscience and endocrinology.

Oncology is a focus, including precision health, CAR T-cell technology, computational systems, epigenetics, single cell and spatial technologies, gene regulation, molecular signaling, translational oncology and cancer genomics.
