Our strengths = your opportunity

Manufacture where you grow

Major producer of quality raw materials. World-leading, consistent, agricultural and cropping regions with diverse sub-climates and controlled environments.

Nation–leading environmental and climate change credentials

Ceased coal-generated electricity production in 2016. Leading the world in the transition to renewable energy. 100% renewable production on track to be achieved before the 2030 target.

World–leader in green economy

Internationally recognised leader in recycling, water management, climate change, smart cities, innovation, and renewable energy.

World–leading capabilities in advanced technologies

Home to technologically advanced glasshouses and renowned global food manufacturers.

Largest concentration of world–class agricultural research in the Southern Hemisphere

Extensive research and development (R&D) proficiency in agricultural production underpinned by the Waite Research Precinct (WRP), the largest agricultural R&D precinct in the Southern Hemisphere.

Robust biosecurity frameworks and traceability systems

Global reputation for producing clean, green and safe food.

Counter–seasonal growing

Reliable source of quality food commodities offering supply security for domestic and international consumers and food and beverage manufacturers.

Sustainable agricultural water sources

Significant natural water sources and storage. Underground wells, recycled water schemes, desalination and rainwater harvesting provide abundant access for primary producers to grow consistent and healthy crops, even in low rainfall environments.

Robust food and beverage supply chain

Access to a well-established supply chain supported by reliable domestic and international logistics and distribution partners.

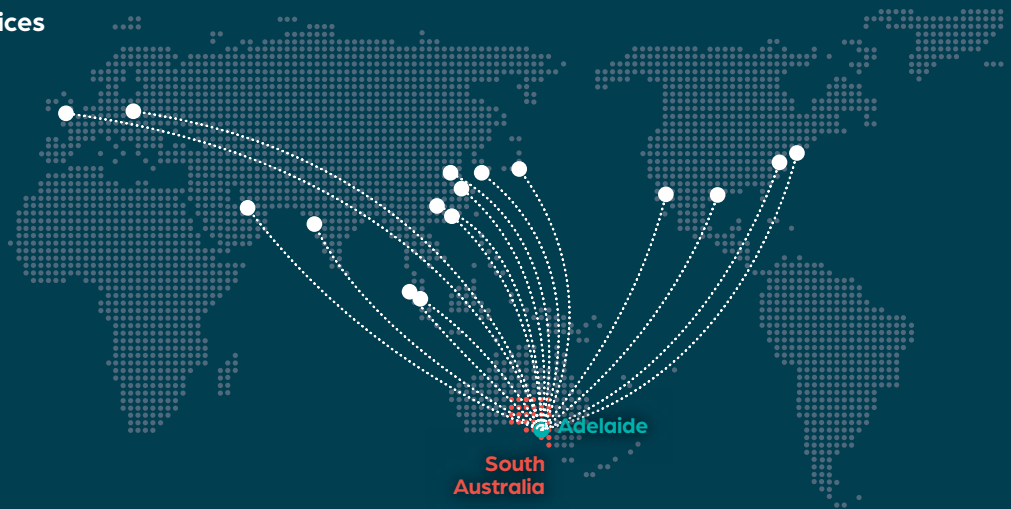

Gateway to the Asia–Pacific

Direct air freight capacity to markets in Asia, the Pacific and Middle East.

Introducing South Australia

Clean, green environment	Primary production industries protected by rigorous biosecurity measures. One of the few places in the world that is free of animal diseases like Foot-and-Mouth Disease, African Swine Fever, Avian Influenza, grape vine destroying pest phylloxera and is the only mainland Australian state recognised as being free of fruit flies.
Manufacture where you grow	Abundant, high quality raw materials, manufacturing capablity and skills, suitable land and sites, access to critical infrastructure and logistics, and outstanding research. South Australia is ideally located to sell to the growing markets of Asia in an ecosystem that nurtures innovation and collaboration.
AgTech leader	An innovative hub for agricultural technology development, commercialisation and industry adoption, and home to the Australian Institute of Machine Learning (AIML). All are ideal for connecting to Agtech opportunities. South Australia offers a nationally recognised entrepreneurial ecosystem with a variety of innovation programs, co-working spaces, and incubators.
Green energy powerhouse and a leader in sustainability	At the forefront of green innovation, waste recycling, and resource recovery by reducing waste to landfill and increasing recycling capabilities. An international leader in integrating wind, solar and battery power into electricity networks, with over 72% of the state's power being generated by wind and the sun. Future green hydrogen production will open opportunities for decarbonising industries including food and beverage manufacturing.
World-leading R&D	Home to globally recognised educational institutions including the Waite Research Precinct, and leading experts at the forefront of R&D and commercialisation. Access to trusted industry partners with expertise to accelerate ideas into concepts ready to take to market.
Centrally located and established freight logistics	A network of toll-free heavy vehicle expressways, numerous intermodal rail routes, and an international port and airport aid supply-chain optimisation, trade facilitation, and enhance South Australia's competitiveness nationally and globally. Servicing the world via air and sea, the state's multi-cultural workforce and Free Trade Agreements with many countries enhance South Australia's ease of trade and connectivity.

● Invest SA international offices

How we can help you

- Identifying a suitable location
- Connections across government
- Attracting and retaining highly-skilled staff
- Introductions to industry partners and networking opportunities
- Planning and cross-government delivery of investment projects
- Connections with our global teams and identifying export opportunities

A global reputation for producing safe, high quality food and beverages

The world's population is expected to increase by more than 2 billion people in the next 30 years, from the current 8.1 billion to 9.7 billion in 2050, and could peak at nearly 10.4 billion in the mid-2080s.[1]

As our population continues to grow, concerns about food security, bio-security, and land loss will form increasingly important considerations for food investment decisions.

South Australia is well equipped to address world food challenges with a geopolitically stable government, a strong, diverse manufacturing base, and new technologies including plant and alternative proteins and precision fermentation. The state is focused on climate change adaption and natural disaster mitigation, growing food demand and the reduction of food waste, supply chain vulnerability, and the need for low carbon processes across the food and beverage sector.

With a thriving food, wine, and agribusiness sector, built from a time-honoured farming and manufacturing history, South Australia boasts an at-scale, high quality, safe and efficient production of agriproduct. The sector integrates world-leading research and development with innovative technology, using advanced manufacturing, artificial intelligence and robotics to increase sustainable food production and meet consumer demand. Competitively priced industrial spaces for food operations, and multi- logistics networks for businesses to sell products to the growing markets of Asia are available to investors.

Key Facts

- **Primary industries and agribusiness contribute AUD$18.5 billion in revenue[2].**
- **51% of South Australia's overseas exports are primary industries and associated processing.**
- **Food and beverage manufacturing is the largest component of manufacturing in South Australia, accounting for almost a fifth of total manufacturing activities.**
- **One in 12 people are employed in food, wine and agribusiness.**

1 *United Nations*

2 *Department for Primary Industries and Regions, South Australia – Scorecard 2022-23*

The South Australian advantage: Manufacture where you grow

South Australia's high-quality raw materials, consistent agricultural and cropping regions, and well-established food and beverage manufacturing ecosystem make it an excellent location for agribusiness-centric manufacturing.

South Australia has many advantages that encourage and support local manufacturing.

Globally recognised production of high-quality raw ingredients - grains, pulses, dairy, meat, seafood and horticulture are grown at scale in a variety of sub-climates and controlled environments supported by South Australia's regulatory systems. Yields continue to grow while maintaining minimal impact on South Australia's clean soils and water resources.

Counter-seasonal - to the Northern Hemisphere allows reliable sourcing of food commodities offering security of supply to consumers and manufacturers in the Asia-Pacific region.

Renewable energy & circular economy - South Australia's strengths in renewable energy and green technologies provide the perfect opportunity for companies looking to minimise their carbon footprint.

New technologies – technologically advanced glasshouses, precision fermentation leveraged from over 100 years of wine making and brewing, and the state's food manufacturing ecosystem.

Central location – provides easy access to the Asia-Pacific region by air or sea.

Strong logistics network - freight moves rapidly interstate and overseas via a network of toll-free heavy vehicle expressways, numerous intermodal rail routes, and an international port and airport.

Grain crops - South Australia grows around four million hectares of grain crops each year including wheat, barley, lentils, and canola. The farm gate value in 2022-23 exceeded AUD$4.77 billion.

All the elements you need to manufacture food successfully, efficiently and profitably:

- abundance of high-quality raw materials
- manufacturing capability and skills
- suitable land and sites
- proximity to agricultural producers
- access to critical infrastructure and logistics
- advanced R&D expertise and capabilities
- a supportive state government

South Australia provides opportunities for companies to establish efficient and cost-effective operations.

Native foods

- Australia features more than 25,000 species of native flora representing rich opportunities for attractive new foods with health enhancing properties.
- An untapped export market for Indigenous botanicals supporting a growing range of Indigenous companies in agribusiness, food, and beverage.
- Four endemic foods have potential for commercialisation to national and international buyers: bush tomato, wattleseed, desert lime and quandong.

South Australia – a global reputation

South Australia offers all the elements you need for successful and profitable food processing, and is ideally located for enterprises keen to sell into the growing markets of Asia.

Grains and pulses

4,500 grain farms grow on average 12.8 million tonnes of grain crop each year, including wheat, barley, lentils, and canola. The farm gate value in 2022-23 exceeded AUD$4.77 billion. More than 80% exported to 60 countries. Local processing includes beer, flour, pasta, and biscuits.

Horticulture

South Australia is a major horticulture producer, recognised for excellence in environmentally clean, safe, and advanced agricultural production. A diverse combination of fruit, nuts and vegetables make up South Australia's horticulture industry, valued at AUD$1.17 billion in 2022/23.

Dairy

South Australia offers large commercial milk processors, niche producers and world-leading boutique artisan cheesemakers. Supported by production of 474 million litres of milk in 2022-23 from more than 65,000 cows with the highest average milk volume per cow in Australia.

Wine

South Australia produces 55% of Australia's crush, with a production value of AUD$2.5 billion per annum. A substantial investment in wine-making infrastructure supports the industry. Rigorous biosecurity measures have kept the state's vines phylloxera free.

Meat and livestock

Domesticated livestock industries, including beef cattle, sheep, pigs, chickens, and goats, generated around 464,000 tonnes of meat in 2022-23 valued at AUD$4.15 billion in revenue.

Seafood

South Australia's clean waters house some of the world's most sought-after seafood including rock lobster, Southern Bluefin Tuna, oysters, prawns, and abalone. In 2022-23, around 74,600 tonnes (AUD$448 million) of wild catch and aquaculture was produced.

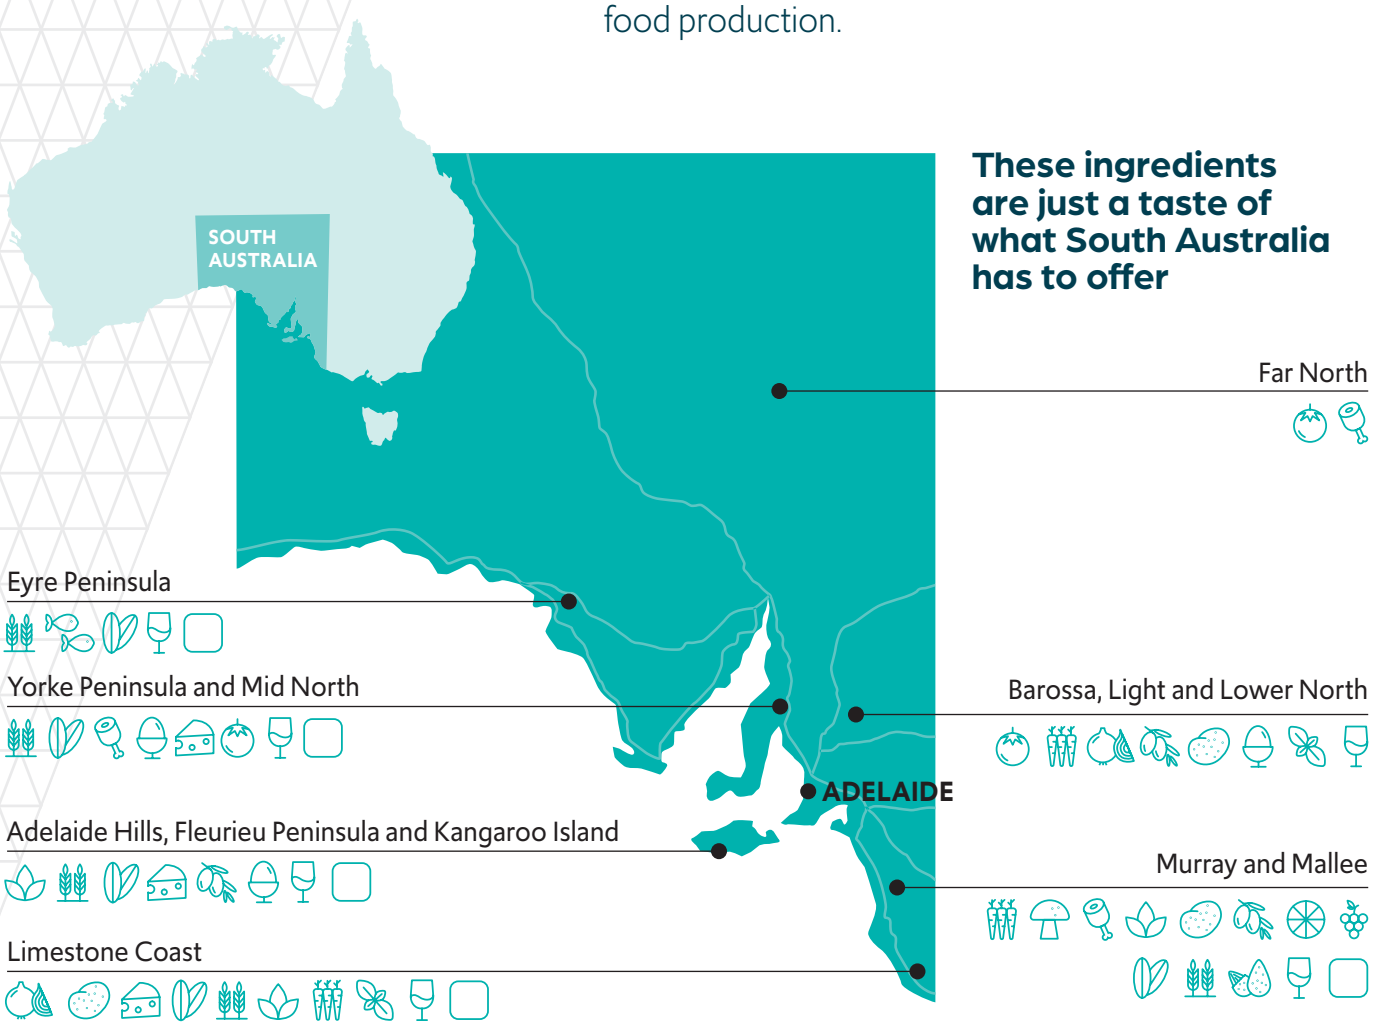

Food processing

With a diverse food production sector processing meat, grains, dairy, seafood, nuts, fruit and vegetables, food and beverage is the largest manufacturing sub-sector in South Australia.

South Australia's regions

South Australia

All the quality ingredients to build wholesome and honest food can be found here in South Australia, with an international reputation for clean, pure and safe food production.

These ingredients are just a taste of what South Australia has to offer

Wheat · Onions · Meat · Almonds · Seafood · Durum · Tomatoes

Barley · Potatoes · Grapes · Olives · Wine · Eggs · Carrots

Basil · Mushrooms · Dairy · Citrus · Other

Other crops include canola, lentils, oats, ryecorn, triticale, lupins, peas, beans (fava and broad), chickpeas and vetch

Plant and alternative proteins

South Australia is the ideal location for next generation plant protein manufacturing - producing 50% of Australia's lentils, 37% of faba beans, 37% of field peas, 24% of pulses and a significant volume of oats. The state's central position in Australia allows for efficient sourcing of ingredients from around the country, and exporting finished products around the world. South Australia is attracting interest from key plant protein ecosystem developers to help the sector grow, and to drive new investment.

Marine life is a source of alternative proteins now used to make new, healthy products. South Australia's blue biotechnology industry offers the following key advantages:

- 80% of the state's marine life occurs nowhere else
- home to fisheries and aquaculture industries that produce safe, sustainable, high quality and high value products
- opportunities supported by leading research and development (R&D) and proactive regulation that support investment from South Australia's bioresources, including marine and land-based licences for macroalgae management (seaweed seedstock or broodstock collection to farm seaweed)
- over 1,400 species of seaweed, 60% unique to the state
- a growing number of seaweed businesses, developing and making fertilisers, and food and health products, with some transitioning to seaweed farming (including methane-reducing *Asparagopsis* feed supplement being grown at scale bt CH4 Global)
- world-class regulatory framework for aquaculture development.

Largest concentration of agricultural research in the Southern Hemisphere

South Australia has proven R&D capabilities:

Waite Research Precinct (WRP)

- co-located organisations and centres of world-class R&D in plant biotechnology, agriculture, food, wine, natural resources science, land science
- an expanding precinct supporting the development of plant proteins and commercialisation pathways
- focused development of plant-based food products, healthy low fat/allergy alternatives.

South Australian Research and Development Institute (SARDI), located at WRP

- milling and pilot scale dry fractionation equipment to enable plant protein, fibre fractionation and sustainable processing research
- lab, pilot scale extrusion and testing facilities for traditional and molecular microbiology, testing for a range of food commodities and processing environments.

Marine Bioproducts Cooperative Research Centre

- Australia's leading marine bioproducts R&D hub.

Progressive regulatory environment

The Government of South Australia is committed to its agribusiness industry and leveraging its proximity to Australia's largest sources of globally renowned, premium quality, next generation plant protein input crops.

Most cost competitive city in Australia

South Australia's lower cost business environment, competitively priced industrial spaces in proximity of agricultural producers, and multi-modal networks, provide opportunities for businesses to establish efficient, cost-effective plant protein manufacturing facilities.

Precision fermentation

Precision fermentation can produce alternative proteins and associated ingredients to meet the future global protein demand. The process of fermenting modified organisms to produce enzymes, medicine and therapeutics safely and effectively has been used for decades. The application of the process to produce animal proteins and other ingredients, presents new challenges.

South Australia is world-recognised in education and innovation in viticulture, winemaking, and production, supported by the globally recognised Adelaide Wine Research Institute (AWRI) and the University of Adelaide. Existing traditional protein production industries, combined with world-leading research organisations, and a large, synergistic wine industry, position South Australia well to support the development of this future global industry.

The world is looking to modern technologies like precision fermentation to meet the food security needs of a growing global population.

Investors can leverage South Australia's significant fermentation capability, built from over a century of wine making and brewing, and the state's food manufacturing ecosystem, to scale up and deliver new food and beverage products.

Australian Wine Research Institute (AWRI)

One of the world's leading grape and wine R&D organisations with:

- capabilities that support precision fermentation, including internationally recognised expertise in microbiology, molecular biology, genomics, and analytical chemistry
- studies in molecular biology and microbiology, recombinant DNA technology, genome editing, flow cytometry and continuous culture fermentation
- next-generation sequencing technologies used to analyse plant and microorganism genomes, and metagenomes in complex food, beverage, and environmental samples
- an extensive culture collection of over 20,000 strains of bacteria and yeast.

The University of Adelaide – Bioprocess Engineering, School of Chemical Engineering

The school has state-of-the-art biomanufacturing laboratories including, industry standard equipment for all major unit operations and analytics up to semi-commercial scale. This includes bioreactors for mammalian and microbial fermentation up to 10L, tangential flow filtration, batch and continuous chromatographic purification, and advanced analytical capabilities.

The university can provide laboratory testing in the following areas:

- lipid nanoparticles, cell uptake optimisation, microfluidics, and drug delivery systems
- drug stability and formulation optimisation
- microbial fermentation and cell culture
- early and late-stage process development, process modelling and optimisation
- continuous biomanufacturing including continuous fermentation and chromatography
- Purity and stability analysis of proteins and other biological products.

Green economy leadership

South Australia is leading the world in approaches to sustainability, energy generation, handling and re-using all forms of waste, and carbon footprint reduction. The state is an ideal location for food businesses seeking to comply with global net zero emission targets.

Green economy leadership[3]

- **South Australia is on track to be a net 100% renewable energy generator by 2027**
- **South Australia leads Australia's recycling and resource recovery performance**
- **highest recovery rate – 81.9% waste recovery rate 2021–22 (3.99 million tonnes diverted from landfill)**
- **92% of recovered materials were recycled in South Australia**
- **#1 globally for share of annual renewable energy generation using wind and solar**
- **in 2023, 74% of the state's electricity was generated using wind and solar**
- **green hydrogen projects – AUD$20 billion**
- **over 90% construction and demolition waste recycled to new products**
- **leading Australian jurisdiction using policy to reduce waste and drive product substitution (such as phasing out single-use plastic bags, food containers, cutlery and straws).**

Climate independent water

South Australia has current recycled water supply:

Virginia Pipeline Scheme (VPS) (1997):

- largest recycled water project of its type in the Southern Hemisphere, second in the world and the first in Australia
- around 20 gigalitres of recycled water per annum
- Class A source of reliable water for the food industry to help growers supply the national market with tomatoes, cucumbers, peppers, and bunch lines.

Northern Adelaide Irrigation Scheme (NAIS) (2018)

- supports agricultural industries by increasing water resource access in the northern Adelaide Plains
- 12 gigalitres of recycled water per annum
- supports the region's agriculture sector – with fertile soils, a Mediterranean climate, proximity to transport, logistics, and ready access to skilled labour.

End Food Waste Australia

End Food Waste Australia (EFWA), based in Adelaide, consists of more than 100 industry, government, and research partners, creating a more productive, sustainable, and resilient Australian food system. EFWA aims to progress Australia's part of the United Nations Sustainable Development Goal 12.3, to halve per capita global food waste at the retail and consumer levels, and reduce food losses along production and supply chains, by 2030.

Sustainable forestry

South Australian forest and wood processing industries are plantation based with no harvesting of native forests. Key highlights:

- every harvested tree was planted for wood production, mainly radiata pine (*Pinus radiata* (189,000 hectares) and Tasmanian blue gum (*Eucalyptus globulus*)
- forest production exceeds 2.7 million cubic metres, AUD$2.6 billion annually
- Limestone Coast - major forestry region, with wood used in house construction, infrastructure, fencing, furniture, bioenergy, and household paper
- Approximately 35% of Australia's house farming and interior sawn wood is made in the Limestone Coast where Australia's first Cross Laminated Timber (CLT) and Glue Laminated Timber (GLT) facility, Timberlink, is located in Tarpeena.

Investment opportunities include processing facilities, value-added initiatives, and renewable energy using forest and processing waste. Timber production innovation opportunities are available to industries and companies to maximise timber use and assist in the transition to net zero carbon emissions.

World–class agricultural research, technology, and innovation

Commitment to new technologies

The state's strong space and defence industries are helping to form a nation leading AgTech innovation sector, driven by satellites used for crop health detection, autonomous farm machinery, robotics in meat processing, and remote sensing to maximise water use efficiency. Innovation is being supported by an increasing use of artificial intelligence, growing food closer to the consumer (reduced transport costs, CO^2 emissions, fresher produce), robotics (everyday operations) and blockchain in farming.

The research and development undertaken at WRP, on behalf of Australia's agricultural sector, has already delivered multiple critical innovations. It is an ideal strategic R&D partner for companies considering a base in South Australia for indoor farming systems and vertical farming expertise.

The state's No and Low Alcohol (NOLO) research facility is at the WRP. The global NOLO wine market, valued at AUD$3.03 billion in 2022, is growing rapidly with Australia representing 5% of volume and 6% of value. The Government of South Australia invested AUD$1.98 million to create the world's first trial-scale NOLO research facility. The investment enables the creation of world-class products, develop a skilled workforce, and capitalise on opportunities.

The campus is located seven kilometres from Adelaide's city centre, home to 19 research and innovation partners including the University of Adelaide, CSIRO, AWRI, SARDI, Australian Grain Technologies, Australian Genome Research Facility, Australian Plant Phenomics Facility (APPF), Food SA, and End Food Waste Australia.

Australian Plant Phenomics Network (APPN)

One of the first plant phenotyping facilities in the world, the APPN is a world-leading infrastructure facility that underpins innovative plant phenomics research to accelerate the development of new and improved crops, healthier food and more sustainable agricultural practice. Facilities are based around automated image analysis of the phenotypic characteristics of extensive germplasm collections and large breeding, mapping and mutant populations. The APPN offers robotics, imaging and computing to enable sensitive, high throughput analyses to be made of plant growth and function with new technologies continually being developed.

The Plant Accelerator

The Plant Accelerator forms part of the APPN's Adelaide facility, located in the WRP. It is the largest high-throughput phenotyping facility in the Southern Hemisphere, providing non-destructive measurement of plant growth and function (phenomics) by combining digital imaging technologies, high-capacity computing and robotics.

Functional foods

The WRP offers a unique testbed for functional food and beverage development and production in South Australia. The foods provide extra health benefits to consumers beyond basic nutrition. With ageing populations, particularly in the Asia Pacific region, driving demand for health promoting foods and beverages, and remedies to diseases including diabetes, digestive issues and bone density loss, the need for functional foods will continue to grow.

Factory of the Future

The Factory of the Future is Australia's first of its kind, Industry 4.0 advanced manufacturing facility, designed to connect industry with technology. The facility delivers a world-class, reconfigurable, advanced manufacturing test bed, training and industry growth facility providing industrial scale testing of new technologies and processes. The Factory of the Future supports the transformation of manufacturing through the integration of Industry 4.0 tools into production, including AI, sensors, advanced robotics, and digital fabrication.

Lot Fourteen

Home to Australian Institute for Machine Learning (AIML) with agricultural focus across three key themes:

- sensing and monitoring
- data management and analysis
- farm automation.

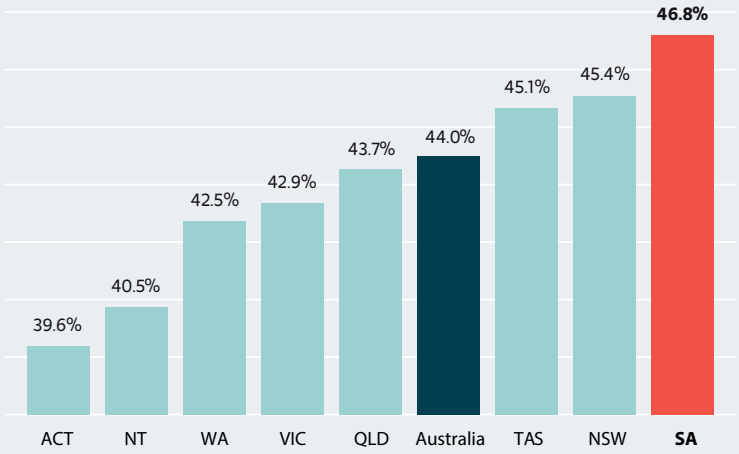

Lot Fourteen provides partnering opportunities with ground-breaking companies, the perfect location to grow with South Australia's AgTech industry.

Australia's most cost competitive city

South Australia's competitive business environment supports commercial success and scaling of operations.

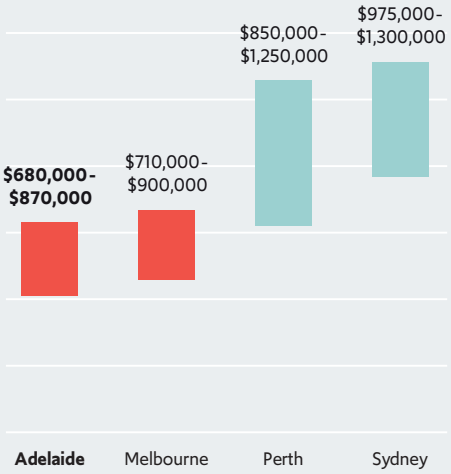

South Australia offers a suitably skilled and scalable workforce with competitive labour costs and high staff retention rates, which are unique to the Australian workforce. Adelaide development costs are one of the lowest in mainland Australia.

Staff retention rates, 5+ years in current main job (% of employed)

Innovation districts

Our sectors co-exist in hi-tech hubs and research centres, forging collaborative ecosystems that open doors and inspire new ways of thinking.

Roseworthy Campus 61kms from Central Business District

A hub of undergraduate teaching, postgraduate training, research, and clinical services with an international reputation for excellence in dryland agriculture, natural resource management and animal production.

Edinburgh Precinct 34kms from Central Business District

The precinct is part of a key food manufacturing, food service, defence and transport industry hub. Located in a major industrial growth corridor connected by Adelaide's Northern Expressway and located adjacent to some of South Australia's fastest growing council areas ensuring access to suitable labour.

Technology Park 17kms from Central Business District

Hub for systems development and integration, information communications technology, advanced manufacturing and electronics, and home to over 100 small to medium enterprises, multinationals and start-ups.

Adelaide BioMed City Adelaide Central Business District

AUD$3.8 billion medical innovation district with leading edge anchor institutes and companies that cluster and connect with start-ups, business incubators and accelerators.

Space Manufacturing Facility Adelaide Central Business District

Plans are underway to establish a space manufacturing facility at Lot Fourteen Innovation District to accelerate the development of local space innovation into real world commercial technologies.

Lot Fourteen Adelaide Central Business District

Australia's first ideas and innovation neighbourhood and home to the Australian Space Agency, SmartSat CRC, Defence and Space Landing Pad, FIXE start-up hub, MIT Adelaide Living Lab, Australian Institute for Machine Learning and the Australian Cyber Collaboration Centre.

UniSA Enterprise Hub Adelaide Central Business District

UniSA's Enterprise Hub works with organisations of all sizes to overcome challenges, innovate and add value, creating partnerships, drawing on the energy and expertise of staff, research, and collaborators to produce mutually beneficial outcomes. There is a cross disciplinary team of experts developing novel solutions for the Australian agri-food industry sector to showcase their sustainability credentials and reduce regulatory burden.

Waite Research Precinct 7kms from Central Business District

Home to the largest concentration of agriculture and wine research and teaching expertise in the Southern Hemisphere, and a leading centre of Australian research capability in wine, grains, soil and plant breeding. Research organisations include Australian Plant Phenomics Network, The Plant Accelerator, South Australian Research and Development Institute.

Tonsley Innovation District 12kms from Central Business District

Home to high-value manufacturing industries including defence, health, medical devices and assistive technologies, clean tech and renewable energy, software and simulation, and minerals and energy services. Home to Australian Industrial Transformation Institute (Factory of the Future), South Australia Drill Core Reference Library, SA-H2H Hydrogen Technology Cluster, Hydrogen Park SA, BAE Systems Maritime Australia, Micro-X and the Medical Device Research Institute.

AgTech demonstration farms showcasing cutting-edge technology

Demonstration farms have been established across the state offering a diversity of climates and soil types, making them the perfect test beds for AgTech companies to demonstrate, validate and further develop technologies hand-in-hand with industry.

- **Struan/Kybybolite** - high rainfall pasture and livestock production systems
- **Kangaroo Island** - sheep (for wool and meat), cattle, cropping, free range poultry (egg production), viticulture, horticulture, aquaculture and apiculture
- **Turretfield** - livestock, pastures and crops
- **Minnipa** - field crops, low rainfall farming systems
- **Nuriootpa and Loxton** - viticulture, horticulture, citrus

Advantage Adelaide – live, work & play

South Australia is a great place to live, work and play. The capital, Adelaide, is consistently ranked as one of the most liveable cities in the world.

Adelaide is a progressive, cosmopolitan capital offering a premium lifestyle with world-renowned festivals, major sporting events and iconic locations, such as the Barossa Valley, Kangaroo Island, and Flinders Ranges.

South Australia's innovative, cost competitive, and agile nature is luring more young talent, and the ability to rapidly scale and provide skilled workers in critical sectors has caught the attention of world-class companies.

We're forging global partnerships and leveraging our position as one of the most liveable and safest cities to grow the state and opportunities for everyone.

There's a strong commitment to collaboration among industries, with specialist precincts such as the Tonsley Innovation District and Lot Fourteen encouraging companies to thrive.

- **shortest daily work commute of the major mainland cities – 21% less than Sydney [4]**
- **one of the lowest cost of living capital cities in Australia [5]**
- **Adelaide's median house price is $680,000 – 44% lower than Sydney[6].**

[4] *Melbourne Institute: Applied Economic & Social Research, The Household, Income and Labour Dynamics in Australia Survey*

The South Australian lifestyle

There is a year-round calendar of large events, entertainment, culture and excitement. Some of the best known cultural and arts events include the Adelaide Festival, WOMADelaide, Tasting Australia, Adelaide Fringe, Adelaide Cabaret Festival, and OzAsia Festival. South Australia hosts international and national sporting events including cycling's Tour Down Under and the Adelaide 500 car race.

Our Mediterranean climate – hot, dry summers and mild, wet winters – enables an exciting outdoor lifestyle. South Australia also hosts globally-renowned sporting events including LIV Golf Adelaide, winner of the World's Best Golf Event of the Year 2023 at the world golf awards.

Adelaide's coastline stretches more than 30 kilometres, delivering wide, golden beaches with clean seas for swimming, kayaking, surfing and more.

It's hard not to escape into nature with parks and walking trails everywhere.

Best of all, getting around Adelaide is effortless. Nothing is really more than 30 minutes away by car so it's easy to have a family, sporting and social life every evening, and an action packed, or relaxing weekend!

South Australia delivers a better, more affordable lifestyle and opportunities – whether in the city or suburbs, on the coast or in the hills.

- **most affordable unit rents and third most affordable house rents of any Australian capital city[7]**
- **affordable and accessible childcare**
- **good public transport and no toll roads**
- **great public and private schools**
- **Adelaide's three public universities are ranked in the top 1% of the estimated 26,000 higher education institutions in the world.[8]**
